

KraneShares FTSE Emerging Markets Plus ETF

Investment Strategy

The KraneShares FTSE Emerging Markets Plus ETF (BATS:KEMP) is a gross domestic product ("GDP") weighted fund that includes China A Shares and China N Shares. Country allocations are based on five year purchase power parity GDP forecasts by the International Monetary Fund. China A Shares are Chinese equities listed on the Shanghai or Shenzhen stock exchanges. China N Shares are China equities listed on the New York or NASDAQ stock exchanges.

Why Weight by GDP?

- A country's weight within a market capitalization weighted index may diverge significantly from that country's share of global GDP
- Developed Markets often trade at a multiple to their respective GDPs while emerging markets often trade at a fraction
- Weighting by GDP, as opposed to market capitalization, increases exposure to larger economies
- **Notable increases – GDP weighted vs. market cap weighted:**
China & India
- **Notable decreases – GDP weighted vs. market cap weighted:**
Taiwan & Brazil

China Share Classes Matter

- Older emerging market funds historically limited their China investment universe to Hong Kong listed Chinese companies only.
- KEMP's China investment universe includes onshore China (A-shares), U.S.-listed Chinese Companies (N-shares), and Chinese companies listed in Hong Kong (H-shares).
- The Onshore Chinese markets consist of the Shanghai and Shenzhen stock exchanges, which are the fourth and eighth largest exchanges in the world respectively, with a combined market cap of \$7.84 trillion.¹
- China N-shares include some of the largest internet and ecommerce companies in China. These companies choose to list in the United States to attract a greater international investor base.

Fund Details	As of 03/31/2017	
Primary Exchange	BATS	
Cusip	500767801	
Total Annual Fund Operating Expense	Gross: 1.11%	Net: 0.91%*

*KraneShares has contractually agreed to reduce its management fee in an amount equal to any Acquired Fund Fees and Expenses incurred by the Fund from its investments in the KraneShares Boserá MSCI China A Share. This expense limitation may be reduced at any time. In the absence of current fee waivers, performance would be reduced.

****Cumulative return is the aggregate amount that an investment has gained or lost over time. Annualized Return is the average return gained or lost by an investment each year over a given time period.**

The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. For performance data current to the most recent month end, please visit www.kraneshares.com

ETF shares are not redeemable with the issuing fund other than in large Creation Unit aggregations. Instead, investors must buy or sell ETF Shares in the secondary market with the assistance of a stockbroker. In doing so, the investor may incur brokerage commissions and may pay more than net asset value when buying and receive less than net asset value (NAV) when selling. The NAV of the Fund's shares is calculated each day the national securities exchanges are open for trading as of the close of regular trading on the New York Stock Exchange ("NYSE"), normally 4:00 P.M. Eastern time (the "NAV Calculation Time"). Shares are bought and sold at market price not NAV. Closing price returns are based on the midpoint of the bid/ask spread at 4:00 P.M. Eastern Time (when NAV is normally determined).

An active secondary market for the Fund's shares may not exist. Although the Fund's shares will be listed on an exchange, subject to notice of issuance, it is possible that an active trading market may not develop or be maintained. There is no guarantee that distributions will be paid.

Index returns are for illustrative purposes only. Index performance returns do not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in an index.

Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' full and summary prospectus, which may be obtained by visiting www.kraneshares.com. Read the prospectus carefully before investing.

Investing involves risk, including possible loss of principal. There can be no assurance that a Fund will achieve its stated objectives. The Funds focus their investments primarily with Chinese issuers and issuers with economic ties to China. The Funds are subject to political, social or economic instability within China which may cause a decline in value. Fluctuations in currency of foreign countries may have an adverse effect on domestic currency values. Emerging markets involve heightened risk related to the same factors as well as increased volatility and lower trading volume. Current and future holdings are subject to risk.

The ability of the KraneShares FTSE Emerging Markets Plus ETF to achieve its investment objective is dependent, in part, on the continuous availability of A Shares through the Fund's investment in the KraneShares Bosera MSCI China A Share ETF and that fund's continued access to the China A Shares market. If such access is lost or becomes inadequate to meet its investment needs, it may have a material adverse effect on the ability of the Fund to achieve its investment objective because shares of the KraneShares Bosera MSCI China A Share ETF may no longer be available for investment by the Fund, may trade at a premium to NAV, or may no longer be a suitable investment for the Fund.

The KraneShares FTSE Emerging Markets Plus ETF and KraneShares Bosera MSCI China A Share ETF may be concentrated in the financial services sector. Those companies may be adversely impacted by many factors, including, government regulations, economic conditions, credit rating downgrades, changes in interest rates, and decreased liquidity in credit markets. This sector has experienced significant losses in the recent past, and the impact of more stringent capital requirements and of recent or future regulation on any individual financial company or on the sector as a whole cannot be predicted. These ETFs may also invest in derivatives. Investments in derivatives, including swap contracts and index futures in particular, may pose risks in addition to those associated with investing directly in securities or other investments, including illiquidity of the derivatives, imperfect correlations with underlying investments, lack of availability and counterparty risk. The use of swap agreements entails certain risks, which may be different from, and possibly greater than, the risks associated with investing directly in the underlying asset.

KEMP invests in variable-interest entities (VIEs), which are investments in foreign-domiciled American Depositary Receipts (ADRs). Rather than owning Chinese-domiciled entities, the VIEs have contractual arrangements designed to provide the economic benefits related to certain Chinese-domiciled companies. The structure of VIEs presents some unique risks that should be considered.

VIE structures do not give investors ownership in the operating company, as stock does. With a VIE, an investor has no direct claim on the core, restricted business assets of the VIE operating company. As a result, investors may not exert as much influence over the subject company as they could if they were owners of common stock. Often, the voting rights in the VIE operating company, especially in matters of corporate governance, are controlled by the principals who established the VIE operating company.

In addition, there is no guarantee as to the enforceability of the VIE structure, as it has never received explicit approval from the Chinese government and is recognized as a structure put in place principally to work around Chinese restrictions on foreign investment.
