

Data as of 3/31/2017

KraneShares Zacks New China ETF (ticker: KFYP)¹

Investment Strategy:

KFYP tracks the Zacks New China Index which takes a smart-beta² approach to provide exposure to companies listed in Mainland China, Hong Kong and the United States whose primary business or businesses are important in the current Five-Year Plan of the central Chinese government. The sectors expected to benefit from the Plan are evaluated and the stocks within each sector are subsequently ranked based on various investment factors, including price, cash flow, free cash flow, momentum and volatility. Based on the foregoing, the top 40 stocks of the index are included in the fund's holdings.

KFYP provides:

- A innovative strategy that offers an "all China" exposure to the "new China" economy.
- Exposure to sectors highlighted in China's Five Year Plan (FYP) such as technology, consumer staples, consumer discretionary, and health care.
- Less emphasis on manufacturing, financials, industrials and heavy materials that defined China's past economic plans.
- Exposure to large cap, mid cap, and small cap Chinese companies trading in Mainland China, Hong Kong and the United States.
- Smart beta² investment strategy focused on sectors/industries highlighted in the FYP.

1. Formerly KraneShares CSI New China ETF

2. Smart beta is an investment style where a manager passively follows an index designed to take advantage of perceived systematic biases or inefficiencies in the market.

Fund Details	As of 3/31/2017
Primary Exchange	NYSE
Total Annual Fund Operating Expenses	0.73%
Cusip	500767207
Inception Date	7/22/2013

Index†	17.03%	6.69%	59.06%	21.40%	13.18%

†The Hybrid KFYP Index (noted as "Index" above in the chart) consists of the CSI China Overseas Five Year Plan Index from the inception of the Fund through June 1, 2016, and the Zacks New China Index after June 1, 2016, and the hybrid of both indices on June 1, 2016.

***Cumulative return is the aggregate amount that an investment has gained or lost over time. Annualized Calendar QTR Return is the average return gained or lost by an investment each year over a given time period.**

The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. For performance data current to the most recent month end, please visit www.kranehares.com

ETF shares are not redeemable with the issuing fund other than in large Creation Unit aggregations. Instead, investors must buy or sell ETF Shares in the secondary market with the assistance of a stockbroker. In doing so, the investor may incur brokerage commissions and may pay more than net asset value (NAV) when buying and receive less than net asset value when selling. The NAV of the Fund's shares is calculated each day the national securities exchanges are open for trading as of the close of regular trading on the New York Stock Exchange ("NYSE"), normally 4:00 P.M. Eastern time (the "NAV Calculation Time"). Shares are bought and sold at market price not NAV. Closing price returns are based on the midpoint of the bid/ask spread at 4:00 P.M. Eastern Time (when NAV is normally determined).

An active secondary market for the Fund's shares may not exist. Although the Fund's shares will be listed on an exchange, subject to notice of issuance, it is possible that an active trading market may not develop or be maintained. There is no guarantee that distributions will be paid.

Index returns are for illustrative purposes only. Index performance returns do not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in an index.

KFYP provides unique policy driven exposures utilizing a smart-beta methodology

- Proprietary multi-factor smart-beta methodology screens for companies with strong risk/reward characteristics
- Selection universe based on China's 13th Five Year Plan and focuses on strategic sectors and industries stated in the plan
- Directly holds Chinese companies listed on the Shanghai, Hong Kong and US Exchanges
- Focuses on domestic consumption with a specific emphasis on internet and technology integration with manufacturing
- Provides a vehicle to "co-invest" with the Chinese government Conclusion

KFYP invests in variable-interest entities (VIEs), which are investments in foreign-domiciled American Depositary Receipts (ADRs). Rather than owning Chinese-domiciled entities, the VIEs have contractual arrangements designed to provide the economic benefits related to certain Chinese-domiciled companies. The structure of VIEs presents some unique risks that should be considered.

VIE structures do not give investors ownership in the operating company, as stock does. With a VIE, an investor has no direct claim on the core, restricted business assets of the VIE operating company. As a result, investors may not exert as much influence over the subject company as they could if they were owners of common stock. Often, the voting rights in the VIE operating company, especially in matters of corporate governance, are controlled by the principals who established the VIE operating company.

In addition, there is no guarantee as to the enforceability of the VIE structure, as it has never received explicit approval from the Chinese government and is recognized as a structure put in place principally to work around Chinese restrictions on foreign investment.

Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' full and summary prospectus, which may be obtained by visiting www.kraneshares.com. Read the prospectus carefully before investing.

Investing involves risk, including possible loss of principal. There can be no assurance that a Fund will achieve its stated objectives. The Funds focus their investments primarily with Chinese issuers and issuers with economic ties to China. The Funds are subject to political, social or economic instability within China which may cause decline in value. Fluctuations in currency of foreign countries may have an adverse effect to domestic currency values. Emerging markets involve heightened risk related to the same factors as well as increase volatility and lower trading volume. Current and future holdings are subject to risk.

Narrowly focused investments typically exhibit higher volatility. Internet companies are subject to rapid changes in technology, worldwide competition, rapid obsolescence of products and services, loss of patent protections, evolving industry standards and frequent new product productions. Such changes may have an adverse impact on performance.
