

KroneShares

Summary Prospectus

KroneShares MSCI One Belt One Road Index ETF

Principal Listing Exchange for the Fund: NYSE Arca, Inc.
Ticker Symbol: OBOR

August 1, 2022

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus, Statement of Additional Information, recent reports to shareholders and other information about the Fund online at www.kraneshares.com. You can also get this information at no cost by calling 1-855-857-2638, by sending an e-mail request to KroneFunds@seic.com or by asking any financial intermediary that offers shares of the Fund. The Fund's Prospectus and Statement of Additional Information, each dated August 1, 2022, as each may be amended or supplemented from time to time, are incorporated by reference into this Summary Prospectus and may be obtained, free of charge, at the website, phone number or email address noted above.

Investment Objective

The KraneShares MSCI One Belt One Road Index ETF (the “Fund”) seeks to provide investment results that, before fees and expenses, track the price and yield performance of a specific foreign equity securities index. The Fund’s current index is the MSCI Global China Infrastructure Exposure Index (the “Underlying Index”).

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses	
(expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.78%
Distribution and/or Service (12b-1) Fees*	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses.	0.78%

* Pursuant to a Distribution Plan, the Fund may bear a Rule 12b-1 fee not to exceed 0.25% per year of the Fund’s average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees has not currently approved the commencement of any payments under the Distribution Plan.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$80	\$249	\$433	\$966

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 36% of the average value of its portfolio. This rate excludes the value of portfolio securities received or delivered as a result of in-kind creations or redemptions of the Fund’s shares.

Principal Investment Strategies

Under normal circumstances, the Fund will invest at least 80% of its net assets (plus borrowings for investment purposes) in instruments in its Underlying Index or in instruments that have economic characteristics similar to those in the Underlying Index. The Underlying Index is designed to measure

the equity market performance of listed companies with high revenue exposure to the Chinese government's "One Belt, One Road" initiative, as determined by the provider of the Underlying Index, MSCI Inc. ("Index Provider") based on companies' industry classifications. The One Belt, One Road initiative is designed to increase the interconnectedness between China and other Eurasian countries by making infrastructure investments that are expected to increase such interconnectedness, such as building new roads and improved communications networks. The Underlying Index is designed generally to include the securities of issuers from emerging and frontier markets and exclude issuers from developed markets, such as the Americas, most European markets, Australia, Hong Kong, Japan, Korea and Taiwan.

The Underlying Index is modified so that as of each Underlying Index rebalance, 45% of the weight of the Underlying Index is allocated to Chinese issuers and 55% is allocated to issuers of other countries. Within these allocations, issuers are weighted based on their free-float market capitalization, except that no country's issuers (except for China) will represent more than 10% of the Underlying Index as of each Underlying Index rebalance. The Underlying Index may include the securities of small-cap, mid-cap and large-cap issuers, subject to a minimum market capitalization screen for liquidity.

The Fund may invest up to 20% of its assets in instruments that are not included in the Underlying Index, but that the Fund's investment adviser, Krane Funds Advisors, LLC ("Krane" or "Adviser"), believes will help the Fund track the Underlying Index. These investments may include equity securities and depositary receipts of issuers whose securities are not constituents of the Underlying Index, derivative instruments (including swaps, futures, forwards, structured notes and options), other investment companies (including exchange traded funds or "ETFs") and cash or cash equivalents (including money market funds). The other investment companies in which the Fund may invest may be advised, sponsored or otherwise serviced by Krane and/or its affiliates. The Fund will not purchase shares of an investment company if it would cause the Fund to (i) own more than 3% of such investment company's voting shares; (ii) invest more than 5% of its total assets in such investment company; or (iii) invest more than 10% of its total assets in investment companies.

The following China-related securities may be included in the Underlying Index and/or represent investments of the Fund:

- *China A-Shares*, which are shares of companies incorporated in mainland China that are traded on the Chinese exchanges and denominated in domestic renminbi. China A-Shares are primarily purchased and sold in the domestic Chinese market. To the extent the Fund invests in China A-Shares, it expects to do so through the trading and clearing facilities of a participating exchange located outside of mainland China ("Stock Connect Programs"). A Renminbi Qualified Foreign Institutional Investor ("RQFII") or Qualified Foreign Institutional Investor ("QFII") license may also be acquired to invest directly in China A-Shares.
- *China B-Shares*, which are shares of companies listed on the Shanghai or Shenzhen Stock Exchange but quoted and traded in foreign currencies (such as Hong Kong Dollars or U.S. Dollars), which were primarily created for trading by foreign investors.
- *China H-Shares*, which are shares of companies incorporated in mainland China and listed on the Hong Kong Stock Exchange ("H-Shares"), where they are traded in Hong Kong dollars and may be traded by foreign investors.
- *China N-Shares*, which are shares of companies with business operations in mainland China and listed on an American stock exchange, such as NYSE or NASDAQ ("N-Shares").

- *P-Chips*, which are shares of private sector companies with a majority of their business operations in mainland China and controlling private Chinese shareholders, which are incorporated outside of mainland China and traded on the Hong Kong Stock Exchange in Hong Kong dollars.
- *Red Chips*, which are shares of companies with a majority of their business operations in mainland China and controlled by the central, provincial or municipal governments of the PRC, whose shares are traded on the Hong Kong Stock Exchange in Hong Kong dollars.
- *S-Chips*, which are shares of companies with business operations in mainland China and listed on the Singapore Exchange. S-Chip shares are issued by companies incorporated anywhere, but many are registered in Singapore, the British Virgin Islands, the Cayman Islands, or Bermuda.

Although the Fund reserves the right to replicate (or hold all constituents of) the Underlying Index, the Fund expects to use representative sampling to track the Underlying Index. "Representative sampling" is a strategy that involves investing in a representative sample of securities that collectively have an investment profile similar to the Underlying Index.

As of May 31, 2022, the Underlying Index included 144 securities of companies with a total market capitalization of \$521 billion, a capitalization range of approximately \$475 million to \$36 billion and an average market capitalization of approximately \$3.6 billion. The largest country representations in the Underlying Index were China (45.49%) and Singapore (12.03%).

To the extent the Underlying Index is concentrated in a particular industry, the Fund is expected to be concentrated in that industry. As of May 31, 2022, issuers in the Industrials sector (36.3%), Materials sector (25.38%) and Financials sector (17.04%) represented significant portions of the Underlying Index. The Underlying Index is rebalanced quarterly.

The Fund may engage in securities lending.

Principal Risks

As with all ETFs, a shareholder of the Fund is subject to the risk that his or her investment could lose money. The Fund may not achieve its investment objective and an investment in the Fund is not by itself a complete or balanced investment program. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves the risk of total loss. In addition to these risks, the Fund is subject to a number of additional principal risks that may affect the value of its shares, including:

Emerging Markets Risk. The Fund's investments in emerging markets are subject to greater risk of loss than investments in developed markets. This is due to, among other things, greater market volatility, greater risk of asset seizures and capital controls, lower trading volume, political and economic instability, greater risk of market shutdown, and more governmental limitations on foreign investments than typically found in developed markets. The economies of emerging markets, and China in particular, may be heavily reliant upon international trade and may suffer disproportionately if international trading declines or is disrupted.

Frontier Markets Risk. Frontier market countries generally have smaller economies and less developed capital markets or legal, regulatory and political systems than traditional emerging market countries. As a result, the risks of investing in emerging market countries are magnified in frontier market countries.

Concentration Risk. The Fund's assets are expected to be concentrated in an industry or group of industries to the extent that the Underlying Index concentrates in a particular industry or group of industries. The securities of companies in an industry or group of industries could react similarly to market developments. Thus, the Fund is subject to loss due to adverse occurrences that affect one industry or group of industries or sector. While the Fund's sector and industry exposure is expected to vary over time based on the composition of the Underlying Index, the Fund is currently subject to the principal risks described below.

Industrials Sector Risk. The industrials sector may be affected by changes in the supply and demand for products and services, product obsolescence, claims for environmental damage or product liability and general economic conditions, among other factors. Government regulation will also affect the performance of investments in such industrials sector issuers, particularly aerospace and defense companies, which rely to a significant extent on government demand for their products and services. Transportation companies, another component of the industrials sector, are subject to sharp price movements resulting from changes in the economy, fuel prices, labor agreements and insurance costs.

Materials Sector Risk. The materials sector may be adversely impacted by the volatility of commodity prices, exchange rates, depletion of resources, over-production, litigation and government regulations, among other factors.

Financials Sector Risk. The performance of companies in the financials sector may be adversely impacted by many factors, including, among others, government regulations, economic conditions, credit rating downgrades, changes in interest rates, and decreased liquidity in credit markets. This sector has experienced significant losses in the recent past, and the impact of more stringent capital requirements and of recent or future regulation on any individual financial company or on the sector as a whole cannot be predicted.

China Risk. The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions in China and surrounding Asian countries and may demonstrate significantly higher volatility from time to time in comparison to developed markets. China may be subject to considerable degrees of economic, political and social instability. Over the last few decades, the Chinese government has undertaken reform of economic and market practices and has expanded the sphere of private ownership of property in China. However, Chinese markets generally continue to experience inefficiency, volatility and pricing anomalies resulting from governmental influence, a lack of publicly available information and/or political and social instability. Chinese companies are also subject to the risk that Chinese authorities can intervene in their operations and structure. In addition, the Chinese economy is export-driven and highly reliant on trading with key partners. A downturn in the economies of China's primary trading partners could slow or eliminate the growth of the Chinese economy and adversely impact the Fund's investments. The Chinese government strictly regulates the payment of foreign currency denominated obligations and sets monetary policy. The Chinese government may introduce new laws and regulations that could have an adverse effect on the Fund. Although China has begun the process of privatizing certain sectors of its economy, privatized entities may lose money and/or be re-nationalized.

In the Chinese securities markets, a small number of issuers may represent a large portion of the entire market. The Chinese securities markets are subject to more frequent trading halts, low trading volume and price volatility. Recent developments in relations between the United States and China have heightened concerns of increased tariffs and restrictions on trade between the two countries.

An increase in tariffs or trade restrictions, or even the threat of such developments, could lead to a significant reduction in international trade, which could have a negative impact on China's export industry and a commensurately negative impact on the Fund.

In recent years, Chinese entities have incurred significant levels of debt and Chinese financial institutions currently hold relatively large amounts of non-performing debt. Thus, there exists a possibility that widespread defaults could occur, which could trigger a financial crisis, freeze Chinese debt and finance markets and make Chinese securities illiquid.

In addition, trade relations between the U.S. and China have recently been strained. Worsening trade relations between the two countries could adversely impact the Fund, particularly to the extent that the Chinese government restricts foreign investments in on-shore Chinese companies or the U.S. government restricts investments by U.S. investors in China. Worsening trade relations may also result in market volatility and volatility in the price of Fund shares.

Disclosure and regulatory standards in emerging market countries, such as China, are in many respects less stringent than U.S. standards. There is substantially less publicly available information about Chinese issuers than there is about U.S. issuers.

A-Shares Risk. A-Shares are issued by companies incorporated in mainland China and are traded on Chinese exchanges. Investments in A-Shares are made available to domestic Chinese investors and certain foreign investors, including those who have been approved as a QFII or a RQFII and through the Stock Connect Programs, which currently include the Shanghai-Hong Kong Stock Connect, Shenzhen-Hong Kong Stock Connect, Shanghai-London Stock Connect, and China-Japan Stock Connect. Investments by foreign investors in A-Shares are subject to various restrictions, regulations and limits. Investments in A-Shares are heavily regulated and the recoupment and repatriation of assets invested in A-Shares is subject to restrictions by the Chinese government. A-Shares may be subject to frequent and widespread trading halts and may become illiquid. This could cause volatility in the Fund's share price and subject the Fund to a greater risk of trading halts.

Custody Risks. In accordance with Chinese regulations and the terms of a QFII or RQFII license, as applicable, and insofar as Krane acquires a QFII or RQFII license, A-Shares will be held in the joint names of the Fund and Krane. While Krane may not use such an account for any purpose other than for maintaining the Fund's assets, the Fund's assets may not be as well protected as they would be if it were possible for them to be registered and held solely in the name of the Fund. There is a risk that creditors of Krane may assert that the securities are owned by Krane and that regulatory actions taken against Krane may affect the Fund. The risk is particularly acute in the case of cash deposited with a People's Republic of China ("PRC") sub-custodian ("PRC Custodian") because it may not be segregated, and it may be treated as a debt owing from the PRC Custodian to the Fund as a depositor. Thus, in the event of a PRC Custodian bankruptcy, liquidation, or similar event, the Fund may face difficulties and/or encounter delays in recovering its cash.

Tax Risk. Per a circular (Caishui [2014] 79), the Fund is temporarily exempt from the Chinese tax on capital gains on trading in A-Shares as a QFII or RQFII or the Shanghai Stock Exchange through the Shanghai-Hong Kong Stock Connect as of November 17, 2014, and the Shenzhen Stock Exchange through the Shenzhen-Hong Kong Stock Connect as of December 5, 2016. There is no indication as to how long the temporary exemption will remain in effect. Accordingly, the Fund may be subject to such taxes in the future. In addition, there is uncertainty as to the application and implementation of China's value added tax to the Fund's activities. The Fund reserves the right to

establish a reserve for taxes which present uncertainty as to whether they will be assessed, although it currently does not do so. If the Fund establishes such a reserve but is not ultimately subject to these taxes, shareholders who redeemed or sold their shares while the reserve was in place will effectively bear the tax and may not benefit from the later release, if any, of the reserve. Conversely, if the Fund does not establish such a reserve but ultimately is subject to the tax, shareholders who redeemed or sold their shares prior to the tax being withheld, reserved or paid will have effectively avoided the tax. Investors should note that such provision, if any, may be excessive or inadequate to meet actual tax liabilities (which could include interest and penalties) on the Fund's investments. Any taxes imposed in connection with the Fund's activities will be borne by the Fund. As a result, investors may be advantaged or disadvantaged depending on the final rules of the relevant tax authorities.

Capital Controls Risk. Economic conditions, such as volatile currency exchange rates and interest rates, political events and other conditions may, without prior warning, lead to intervention by government actors and the imposition of "capital controls." Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets. Levies may be placed on profits repatriated by foreign entities (such as the Fund). Although the RMB is not presently freely convertible, rather it is subject to the approval of the State Administration of Foreign Exchange ("SAFE") and other relevant authorities, repatriations by RQFIs or through the Stock Connect Programs are currently permitted daily and Chinese authorities have indicated their plans to move to a fully freely convertible RMB. There is no assurance, however, that repatriation restrictions will not be (re-)imposed in the future.

Stock Connect Program Risk. The Stock Connect Programs are subject to daily quota limitations, and an investor cannot purchase and sell the same security on the same trading day, which may restrict the Fund's ability to invest in A-Shares through the Programs and to enter into or exit trades on a timely basis. The Shanghai and Shenzhen markets may be open at a time when the participating exchanges located outside of mainland China are not active, with the result that prices of A-Shares may fluctuate at times when the Fund is unable to add to or exit its positions. Only certain China A-Shares are eligible to be accessed through the Stock Connect Programs. Such securities may lose their eligibility at any time, in which case they could be sold but could no longer be purchased through the Stock Connect Programs. Because the Stock Connect Programs are still evolving, the actual effect on the market for trading A-Shares with the introduction of large numbers of foreign investors is still relatively unknown. Further, regulations or restrictions, such as limitations on redemptions or suspension of trading, may adversely impact the program. There is no guarantee that the participating exchanges will continue to support the Stock Connect Programs in the future.

Investments in China A-Shares may not be covered by the securities investor protection programs of either exchange and, without the protection of such programs, will be subject to the risk of default by the broker. Because of the way in which China A-Shares are held in the Stock Connect Programs, the Fund may not be able to exercise the rights of a shareholder and may be limited in its ability to pursue claims against the issuer of a security, and may suffer losses in the event the depository of the Chinese exchange becomes insolvent.

B-Shares Risk. The China B-Share market is generally smaller, less liquid and has a smaller issuer base than the China A-Share market. The issuers that compose the B-Share market include a broad range of companies, including companies with large, medium and small capitalizations. Further, the B-Shares market may behave very differently from other portions of the Chinese equity markets, and there may be little to no correlation between the performance of the two.

H-Shares Risk. H-Shares are foreign securities which, in addition to the risks described herein, are subject to the risk that the Hong Kong stock market may behave very differently from the mainland Chinese stock market. There may be little to no correlation between the performance of the Hong Kong stock market and the mainland Chinese stock market.

N-Shares Risk. N-Shares are securities of companies with business operations in mainland China and listed on an American stock exchange, such as the NYSE or NASDAQ. Because companies issuing N-Shares have business operations in China, they are subject to certain political and economic risks in China. The American stock market may behave very differently from the mainland Chinese stock market, and there may be little to no correlation between the performance of the two.

P-Chip Companies Risk. P-Chip companies are often run by the private sector and have a majority of their business operations in mainland China. P-Chip shares are traded in Hong Kong dollars on the Hong Kong Stock Exchange, and may also be traded by foreigners. Because they are traded on the Hong Kong Stock Exchange, P-Chips are also subject to risks similar to those associated with investments in H Shares. They are also subject to risks affecting their jurisdiction of incorporation, including any legal or tax changes.

Red Chip Companies Risk. Red Chip companies are controlled, either directly or indirectly, by the central, provincial or municipal governments of the PRC. Red Chip shares are traded in Hong Kong dollars on the Hong Kong Stock Exchange and may also be traded by foreigners. Because Red Chip companies are controlled by various PRC governmental authorities, investing in Red Chips involves risks that political changes, social instability, regulatory uncertainty, adverse diplomatic developments, asset expropriation or nationalization, or confiscatory taxation could adversely affect the performance of Red Chip companies. Red Chip companies may be less efficiently run and less profitable than other companies.

S-Chip Companies Risk. The Fund may invest in shares of companies with business operations in mainland China and listed on the Singapore Exchange ("S-Chips"). S-Chip shares are issued by companies incorporated anywhere, but many are registered in Singapore, the British Virgin Islands, the Cayman Islands, or Bermuda. They are subject to risks affecting their jurisdiction of incorporation, including any legal or tax changes. S-Chip companies may or may not be owned at least in part by a Chinese central, provincial or municipal government and be subject to the types of risks that come with such ownership described herein. There may be little or no correlation between the performance of the Singapore stock market and the mainland Chinese stock market.

Special Risk Considerations of Investing in China. For purposes of raising capital offshore on exchanges outside of China, including on U.S. exchanges, many Chinese-based operating companies are structured as Variable Interest Entities ("VIEs"). In this structure, the Chinese-based operating company is the VIE and establishes an entity, which is typically offshore in a foreign jurisdiction, such as the Cayman Islands. The offshore entity lists on a foreign exchange and enters into contractual arrangements with the VIE. This structure allows Chinese companies in which the government restricts foreign ownership to raise capital from foreign investors. While the offshore entity has no equity ownership of the VIE, these contractual arrangements permit the offshore entity to consolidate the VIE's financial statements with its own for accounting purposes and provide for economic exposure to the performance of the underlying Chinese operating company. Therefore, an investor in the listed offshore entity, such as the Fund, will have exposure to the Chinese-based operating company only through contractual arrangements and has no ownership in the Chinese-based operating company. Furthermore, because the offshore entity only has specific rights provided for in these

service agreements with the VIE, its abilities to control the activities at the Chinese-based operating company are limited and the operating company may engage in activities that negatively impact investment value. While the VIE structure has been widely adopted, it is not formally recognized under Chinese law and therefore there is a risk that the Chinese government could prohibit the existence of such structures or negatively impact the VIE's contractual arrangements with the listed offshore entity by making them invalid. If these contracts were found to be unenforceable under Chinese law, investors in the listed offshore entity, such as the Fund, may suffer significant losses with little or no recourse available. If the Chinese government determines that the agreements establishing the VIE structures do not comply with Chinese law and regulations, including those related to restrictions on foreign ownership, it could subject a Chinese-based issuer to penalties, revocation of business and operating licenses, or forfeiture of ownership interest.

Singapore Risk. Investments in Singaporean issuers involve risks that are specific to Singapore, including legal, regulatory, political, currency and economic risks. In addition, because Singapore's economy is export-driven, Singapore relies heavily on its trading partners. Political and economic developments of Singapore's neighbors may have an adverse effect on Singapore's economy

Equity Securities Risk. The values of equity securities are subject to factors such as market fluctuations, changes in interest rates and perceived trends in stock prices. Equity securities may be more volatile than other asset classes and are generally subordinate in rank to debt and other securities of the same issuer.

Foreign Securities Risk. Investments in securities of non-U.S. issuers may be less liquid than investments in U.S. issuers, may have less governmental regulation and oversight, and are typically subject to different investor protection standards than U.S. issuers. Investments in non-U.S. securities entail the risk of loss due to foreign currency fluctuations, political or economic instability, less complete financial information about the issuers, the possible imposition of withholding or confiscatory taxes, the possible seizure or nationalization of foreign holdings, and the possible establishment of exchange controls or freezes on the convertibility of currency. Foreign market trading hours, clearance and settlement procedures, and holiday schedules may limit the Fund's ability to buy and sell securities. Additionally, foreign issuers may be subject to different accounting, auditing, recordkeeping, and financial reporting requirements. Foreign investment risks may be greater in developing and emerging markets than in developed markets. These factors could result in a loss to the Fund.

Geographic Focus Risk. The Fund's investments are expected to be focused in a particular country, countries, or region to the same extent as the Underlying Index and therefore the Fund may be susceptible to adverse market, political, regulatory, and geographic events affecting that country, countries or region. Such geographic focus also may subject the Fund to a higher degree of volatility than a more geographically diversified fund.

Currency Risk. The Fund's net asset value ("NAV") is determined on the basis of the U.S. dollar, therefore, the Fund may lose value if the local currency of a foreign market depreciates against the U.S. dollar, even if the local currency value of the Fund's holdings goes up. Currency exchange rates can be very volatile and can change quickly and unpredictably, which may adversely affect the Fund. The Fund may also be subject to delays in converting or transferring U.S. dollars to foreign currencies for the purpose of purchasing portfolio investments. This may hinder the Fund's performance, including because any delay could result in the Fund missing an investment opportunity and purchasing securities at a higher price than originally intended, or incurring cash drag.

ETF Risk. As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for exchange-traded funds (“ETFs”), such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

Cash Transactions Risk. Like other ETFs, the Fund sells and redeems its shares only in large blocks called Creation Units and only to “Authorized Participants.” Unlike many other ETFs, however, the Fund expects to effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities. Thus, an investment in the Fund may be less tax-efficient than an investment in other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. As a result, the Fund may pay out higher capital gains distributions than ETFs that redeem in-kind. Further, paying redemption proceeds in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to obtain the cash needed to distribute redemption proceeds at an inopportune time.

International Closed Market Trading Risk. To the extent the Fund’s investments trade in markets that are closed when the Fund and Exchange are open, there are likely to be deviations between current pricing of an underlying security and the prices at which the underlying securities are valued for purposes of the Fund’s NAV. As a result, Shares may appear to trade at a significant discount or premium to NAV greater than those incurred by other ETFs. In addition, shareholders may not be able to purchase or redeem their shares of the Fund, or purchase or sell shares of the Fund on the Exchange, on days when the NAV of the Fund could be significantly affected by events in the relevant non-U.S. markets.

Premium/Discount Risk. There may be times when the market price of the Fund’s shares is more than the NAV intra-day (at a premium) or less than the NAV intra-day (at a discount). As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop loss orders to sell Fund shares may be executed at prices well below NAV.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of shares. Secondary market trading is subject to bid-ask spreads and trading in Fund shares may be halted by the Exchange because of market conditions or other reasons. If a trading halt occurs, a shareholder may temporarily be unable to purchase or sell shares of the Fund. In addition, although the Fund’s shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained or that the Fund’s shares will continue to be listed.

Small Fund Risk. The Fund is small and does not yet have a significant number of shares outstanding. Small funds are at greater risk than larger funds of wider bid-ask spreads for its shares, trading at a greater premium or discount to NAV, liquidation and/or a stop to trading.

Liquidity Risk. The Fund's investments are subject to liquidity risk, which exists when an investment is or becomes difficult or impossible to purchase or sell at an advantageous time and price. If a transaction is particularly large or if the relevant market is or becomes illiquid, it may not be possible to initiate a transaction or liquidate a position, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. Liquidity risk may be the result of, among other things, market turmoil, the reduced number and capacity of traditional market participants, or the lack of an active trading market. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, new legislation or regulatory changes inside or outside the U.S. Liquid investments may become less liquid after being purchased by the Fund, particularly during periods of market stress. In addition, if a number of securities held by the Fund stop trading, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt. Certain countries in which the Fund may invest may be subject to extended settlement delays and/or foreign holidays, during which the Fund will unlikely be able to convert holdings to cash.

Small- and Mid-Capitalization Company Risk. Investing in the securities of small and medium capitalization companies involves greater risk and the possibility of greater price volatility than investing in larger capitalization companies. Since small and medium-sized companies may have limited operating histories, product lines and financial resources, the securities of these companies may be less liquid and more volatile. They may also be sensitive to (expected) changes in interest rates and earnings.

Large Capitalization Company Risk. Large capitalization companies may be unable to respond quickly to new competitive challenges and attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion. As such, returns on investments in stocks of large capitalization companies could trail the returns on investments in stocks of small and mid capitalization companies.

Passive Investment Risk. There is no guarantee that the Underlying Index will create the desired exposure and the Fund is not actively managed. It does not seek to "beat" the Underlying Index or take temporary defensive positions when markets decline. Therefore, the Fund may purchase or hold securities with current or projected underperformance.

Management Risk. The Fund may not fully replicate the Underlying Index and may hold less than the total number of securities in the Underlying Index. Therefore, the Fund is subject to the risk that the Adviser's security selection process may not produce the intended results.

Tracking Error Risk. The Fund's return may not match or achieve a high degree of correlation with the return of the Underlying Index. This may be due to, among other factors, the Fund holding cash under certain circumstances in lieu of Underlying Index securities, such as when the Fund is subject to delays converting U.S. dollars into a foreign currency to purchase foreign securities and unable to invest in certain constituents of the Underlying Index due to regulatory constraints, trading suspensions, and legal restrictions imposed by foreign governments. To the extent that the Fund employs a representative sampling strategy or calculates its NAV based on fair value prices and the value of the Underlying Index is based on securities' closing prices on local foreign markets, the Fund's ability to track the Underlying Index may be adversely affected.

Market Risk. The values of the Fund's holdings could decline generally or could underperform other investments. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, and/or other government actors could cause volatility in global financial markets and negative sentiment, which could have a negative impact on the Fund and could result in losses. Geopolitical and other risks, including environmental and public health risks may add to instability in world economies and markets generally. Changes in value may be temporary or may last for extended periods. Further, the Fund is susceptible to the risk that certain investments may be difficult or impossible to sell at a favorable time or price. Market developments may also cause the Fund's investments to become less liquid and subject to erratic price movements.

Valuation Risk. Independent market quotations for certain investments held by the Fund may not be readily available, and such investments may be fair valued or valued by a pricing service at an evaluated price. These valuations involve subjectivity and different market participants may assign different prices to the same investment. As a result, there is a risk that the Fund may not be able to sell an investment at the price assigned to the investment by the Fund. In addition, the securities in which the Fund invests may trade on days that the Fund does not price its shares; as a result, the value of Fund shares may change on days when investors cannot purchase or sell their Fund holdings.

Tax Risk. In order to qualify for the favorable tax treatment available to regulated investment companies, the Fund must satisfy certain income, asset diversification and distribution requirements each year. The Fund's investments in issuers whose control persons are not certain creates a risk that tax authorities may retrospectively deem the Fund to have failed the asset diversification requirements. If the Fund were to fail the favorable tax treatment requirements, it would be taxed in the same manner as an ordinary corporation, which would adversely affect its performance.

Depository Receipts Risk. The Fund may hold the securities of foreign companies in the form of depository receipts, including American Depository Receipts and Global Depository Receipts. Investing in depository receipts entails the risks associated with foreign investments, such as fluctuations in foreign currency exchange rates and political and economic risks distinct from those associated with investing in the securities of U.S. issuers. In addition, the value of the securities underlying the depository receipts may change materially when the U.S. markets are not open for trading, which will affect the value of the depository receipts.

Derivatives Risk. The use of derivatives (including swaps, futures, forwards, structured notes and options) may involve leverage, which includes risks that are different from, and greater than, the risks associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value and valuation may be more difficult in times of market turmoil. There may be imperfect correlation between the derivative and that of the reference asset, resulting in unexpected returns that could materially adversely affect the Fund. Certain derivatives (such as swaps and options) are bi-lateral agreements that expose the Fund to counterparty risk, which is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of derivative. In that case, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations. That risk is generally thought to be greater with over-the-counter (OTC) derivatives than with derivatives that are exchange traded or centrally cleared.

Counterparty risks are compounded by the fact that there are only a limited number of ways available to invest in certain reference assets and, therefore, there may be few counterparties to swaps or options based on those reference assets. Many derivatives are subject to segregation requirements that require the Fund to segregate the market or notional value of the derivatives, which could impede the portfolio management of the Fund.

IPO Risk. Securities issued in IPOs have no trading history, and information about the companies may be available for very limited periods. In addition, the prices of securities sold in IPOs may be highly volatile. At any particular time or from time to time, the Fund may not be able to invest in securities issued in IPOs, or invest to the extent desired, because, for example, only a small portion (if any) of the securities being offered in an IPO may be available to the Fund. In addition, as the Fund increases in size, the impact of IPOs on the Fund's performance will generally decrease

Investments in Investment Companies Risk. The Fund may invest in other investment companies, including those that are advised, sponsored or otherwise serviced by Krane and/or its affiliates. The Fund will indirectly be exposed to the risks of investments by such funds and will incur its pro rata share of the underlying fund's expenses. Additionally, investments in ETFs are subject to ETF Risk. Krane is subject to conflicts of interest in allocating Fund assets to investment companies that are advised, sponsored or otherwise serviced by Krane and/or its affiliates. To the extent that the Fund invests in investment companies or other pooled investment vehicles that are not registered pursuant to the 1940 Act, including foreign investment companies, it will not enjoy the protections of the U.S. law.

Securities Lending Risk. To the extent the Fund lends its securities, it may be subject to the following risks: (1) the securities in which the collateral is invested may not perform sufficiently to cover the applicable rebate rates paid to borrowers and related administrative costs; (2) delays may occur in the recovery of securities from borrowers, which could interfere with the Fund's ability to vote proxies or to settle transactions; and (3) although borrowers of the Fund's securities typically provide collateral in the form of cash that is reinvested in securities, there is the risk of possible loss of rights in the collateral should the borrower fail financially.

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Performance Information

The following bar chart and table illustrate the variability of the Fund's returns and indicate the risks of investing in the Fund by showing how the Fund's average annual total returns compare with those of a broad measure of market performance. All returns include the reinvestment of dividends and distributions. As always, please note that the Fund's past performance (before and after taxes) is not necessarily an indication of how it will perform in the future. Updated performance information is available at no cost by visiting www.kraneshares.com.

As of June 30, 2022, the Fund's calendar year-to-date total return was -17.10%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter Ended/Year
Highest Return	26.74%	12/31/2020
Lowest Return	-26.85%	3/31/2020

Average Annual Total Returns for the periods ended December 31, 2021

<u>KraneShares MSCI One Belt One Road Index ETF</u>	<u>1 year</u>	<u>Since Inception (9-7-2017)</u>
Return Before Taxes	17.48%	7.85%
Return After Taxes on Distributions	16.69%	7.33%
Return After Taxes on Distributions and Sale of Fund Shares	11.07%	6.25%
MSCI Global China Infrastructure Exposure Index (Net) (Reflects reinvested dividends net of withholding taxes, but reflects no deduction for fees, expenses or other taxes)*	18.10%	9.17%
S&P 500 Index (Reflects no deduction for fees, expenses or taxes)	28.71%	18.62%

* The MSCI Global China Infrastructure Exposure Index (Net) reflects the reinvestment of any cash distributions after deduction of any withholding tax using the maximum rate applicable to non-resident institutional investors who do not benefit from double taxation treaties.

Average annual total returns are shown on a before- and after-tax basis for the Fund. After-tax returns for the Fund are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold shares through tax-deferred arrangements, such as 401(k) plans or individual retirement plans.

Management

Investment Adviser

Krane Funds Advisors, LLC serves as the investment adviser to the Fund.

Portfolio Manager

James Maund, Head of Capital Markets at the Adviser, has served as the lead portfolio manager of the Fund since January 2020. Chief Operating Officer of the Adviser, also serves as a portfolio manager of the Fund. Mr. Shelon supports Mr. Maund and Krane's investment team for the Fund and has been a portfolio manager of the Fund since 2018.

Purchase and Sale of Fund Shares

Shares may be purchased and redeemed from the Fund only in "Creation Units" of 50,000 shares, or multiples thereof. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on the Exchange. Individual shares can be bought and sold throughout the trading day like other publicly traded securities through a broker-dealer on the Exchange. These transactions do not involve the Fund. The price of an individual Fund share is based on market prices, which may be different from its NAV. As a result, the Fund's shares may trade at a price greater than the NAV (at a premium) or less than the NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). Most investors will incur customary brokerage commissions and charges when buying or selling shares of the Fund through a broker-dealer.

Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid ask spreads, are available on the Fund's website at www.kraneshares.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account, which may be taxable upon withdrawal.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary's website for more information.
