Fund Summary

KraneShares Global Carbon Transformation ETF

Investment Objective

The KraneShares Global Carbon Transformation ETF (the “Fund”) seeks long-term growth of capital.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.88%
Distribution and/or Service (12b-1) Fees*	0.00%
Other Expenses**	0.01%
Total Annual Fund Operating Expenses	0.89%

* Pursuant to a Distribution Plan, the Fund may bear a Rule 12b-1 fee not to exceed 0.25% per year of the Fund’s average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees has not currently approved the commencement of any payments under the Distribution Plan.

** Based on estimated amounts for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

<u>1 Year</u>	<u>3 Years</u>
\$91	\$284

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. For the period March 16, 2022 to March 31, 2022, the Fund’s portfolio turnover rate was 1% of the average value of its portfolio.

Principal Investment Strategies

To pursue its goal, the Fund will invest primarily in equity securities and depository receipts of U.S. and foreign companies, including companies located in emerging markets, that are “Carbon Emissions Reducers”. The Fund defines “Carbon Emissions Reducers” for these purposes to be companies that are taking material steps to reduce (1) the carbon footprint of their products and/or services or (2) the carbon footprint of other companies. This includes companies in the supply chain of such companies and companies that are increasing their business with the companies taking material steps to reduce their carbon footprint. Companies that are moving aggressively to profit from the decarbonization movement, such as by repurposing existing operations or investing in new

Fund Summary

KraneShares Global Carbon Transformation ETF

technologies so as to reduce their carbon footprint in the future and companies that provide products or services, including intellectual property, that are designed to enable other businesses to reduce carbon emissions, are examples of Carbon Emissions Reducers. The Fund is actively-managed by Krane Funds Advisors, LLC (the “Adviser”).

The Adviser believes that investing in Carbon Emissions Reducers may offer the potential for above-average long-term growth, especially if environmental, social and corporate governance (“ESG”) factors become more consequential to investors. Since carbon dioxide emissions from human activities make up the majority of greenhouse gas (“GHG”) emissions, the production, deployment and use of clean and low-emission energy technologies and processes to reduce carbon dioxide emissions is consistent with the broad social objective of reducing GHG emissions.

The Adviser seeks to invest in Carbon Emissions Reducers across industries, sectors and market capitalizations, including the energy, utilities, materials, industrials, and information technology sectors. The Adviser seeks to invest in companies that offer products and services that are expected to result in a future reduction of carbon emissions and benefit from the adoption of low-carbon emissions objectives. The Adviser’s process seeks to estimate the future valuations of companies not only based on current financial metrics, but also inclusive of the Adviser’s assessment of the potential future value of their decarbonization efforts. At the time of investment by the Fund, a company may not be a low carbon emitter, but rather will be actively seeking to reduce its carbon footprint and/or the carbon footprint of its suppliers and customers. For example, a producer of offshore oil drilling machinery would qualify for investment if it were repurposing its capabilities to develop offshore wind energy turbines.

Criteria that the Adviser may consider in selecting companies for the Fund’s portfolio include:

- a company’s position in its industry;
- its stated commitment to decarbonization and the existence of disclosed strategies and/or management incentives tied to successful decarbonization initiatives;
- its assets, products, customer base and exposure to geographic locations that the Adviser expects to benefit from decarbonization trends;
- its ability to derive and maintain a competitive advantage from its existing market position, processes, technologies and customer relationships as businesses transition to address decarbonization objectives;
- its capital allocation strategy, particularly with respect to decarbonization;
- its corporate and capital structure activity (including mergers, acquisitions and divestitures) to the extent it appears to the Adviser to be designed to facilitate an accelerated decarbonization transition;
- its prospective growth rate, potential returns and security valuation, from its investments in decarbonization-related areas; and
- its shareholder base, including the perceived motivations of its shareholders.

Using proprietary, fundamental, bottom-up analysis of company-disclosed and third-party data, the Adviser analyzes sectors and industries that the Adviser expects to be impacted by societal, shareholder or governmental pressure to decarbonize, seeking to identify those in which positive business impacts from decarbonization appear most likely. Within each such sector and industry,

Fund Summary

KraneShares Global Carbon Transformation ETF

the Adviser seeks to identify for the Fund companies that are well-positioned to benefit from the transition to a decarbonized world. The Adviser will exit a position if, in the opinion of the Adviser, a more attractive investment opportunity exists and/or if the thesis that drove the investment is no longer present.

Under normal circumstances, the Fund will invest in approximately 30 to 50 companies. The Fund defines emerging markets as those in the MSCI Emerging Markets Index. The Fund may invest in derivative instruments (including swaps, futures, forwards, structured notes and options) for investment purposes, which may include altering the Fund's exposure to currencies, sectors and individual issuers.

The Fund is non-diversified.

The Fund may engage in securities lending.

Principal Risks

As with all exchange traded funds ("ETFs"), a shareholder of the Fund is subject to the risk that his or her investment could lose money. The Fund may not achieve its investment objective and an investment in the Fund is not by itself a complete or balanced investment program. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves the risk of total loss. In addition to these risks, the Fund is subject to a number of additional principal risks that may affect the value of its shares, including:

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Adviser's success or failure to implement investment strategies for the Fund. The Adviser's evaluations and assumptions regarding investments, markets, trends, and other factors may not successfully achieve the Fund's investment objective given actual market conditions

Decarbonization Government Policy Risk. The adoption of clean and low-emission energy technologies and processes is currently driven in part by government policies targeting reduced greenhouse gas (GHG) emissions. Currently, more than 100 countries have committed to becoming carbon neutral by 2050, with many of them having earlier target dates. If governments globally were to abandon or diminish their GHG reduction initiatives, this may have the effect of reducing the corporate incentives to adopt clean and low-emission energy technologies and processes, resulting in less activity in this area and potentially adversely affecting the Fund.

Clean and Low-Emission Energy Technology Risk. A wide range of clean and low-emission energy technologies and processes are being advanced as candidates for adoption by corporations seeking to decarbonize their operations. There can be no assurance that any particular technology will be economically deployed to achieve the desired corporate objectives, and individual technologies implemented by corporations in the pursuit of decarbonization may differ in cost and efficacy than expected. The Fund will invest in companies producing and utilizing a variety of clean and emissions-reducing energy technologies and approaches. As a result, the Adviser seeks to minimize the risk to the Fund from the reliance on any particular technological approach. At the time of investment by the Fund, a company may not be a low carbon emitter, but rather will be actively seeking to reduce its carbon footprint, the carbon footprint of its suppliers and/or customers, and/or develop new revenue streams from decarbonization activities.

Fund Summary

KraneShares Global Carbon Transformation ETF

Energy Sector Risk. Investments in, and/or exposure to, the energy sector may be highly volatile and can change quickly and unpredictably due to a number of factors, including political, legislative and/or regulatory changes, adverse market conditions, increased competition affecting the energy sector, financial, accounting and tax matters and other events that the Fund cannot control. In addition, the value of energy commodities may fluctuate widely due to changes in supply and demand. The energy sector is typically cyclical and highly dependent upon commodities and energy prices. Issuers in this sector are usually subject to substantial government regulation and may be subject to contractual fixed pricing, which may increase the cost of business and limit these issuers' earnings, and a significant portion of their revenues depends on a relatively small number of customers, including governmental entities and utilities.

Utilities Sector Risk. The utilities sector is subject to significant government regulation and oversight. Companies in the utilities sector may be adversely affected by, among other factors, increases in commodity and operating costs, rising costs of financing capital construction and the cost of complying with government regulations, including unexpected global force majeure events that adversely impact the valuation of companies in the utilities sector.

Materials Sector Risk. The materials sector may be adversely impacted by the volatility of commodity prices, exchange rates, depletion of resources, over-production, litigation and government regulations, among other factors.

Industrials Sector Risk. The industrials sector may be affected by changes in the supply and demand for products and services, product obsolescence, claims for environmental damage or product liability and general economic conditions, among other factors. Government regulation will also affect the performance of investments in such industrials sector issuers, particularly aerospace and defense companies, which rely to a significant extent on government demand for their products and services. Transportation companies, another component of the industrials sector, are subject to sharp price movements resulting from changes in the economy, fuel prices, labor agreements and insurance costs.

Information Technology Sector Risk. Market or economic factors impacting information technology companies and companies that rely heavily on technology advances could have a major effect on the value of stocks in the information technology sector. The value of stocks of technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from competitors with lower production costs. Information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability. Additionally, companies in the information technology sector may face dramatic and often unpredictable changes in growth rates and competition for the services of qualified personnel.

Large Capitalization Company Risk. Large capitalization companies may be unable to respond quickly to new competitive challenges and attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion. As such, returns on investments in stocks of large capitalization companies could trail the returns on investments in stocks of small and mid-capitalization companies.

Fund Summary

KraneShares Global Carbon Transformation ETF

Small- and Mid-Capitalization Company Risk. Investing in the securities of small and medium capitalization companies involves greater risk and the possibility of greater price volatility than investing in larger capitalization companies. Since small and medium-sized companies may have limited operating histories, product lines and financial resources, the securities of these companies may be less liquid and more volatile. They may also be sensitive to (expected) changes in interest rates and earnings.

Foreign Securities Risk. Investments in securities of non-U.S. issuers may be less liquid than investments in U.S. issuers, may have less governmental regulation and oversight, and are typically subject to different investor protection standards than U.S. issuers. Investments in non-U.S. securities entail the risk of loss due to foreign currency fluctuations, political or economic instability, less complete financial information about the issuers, the possible imposition of withholding or confiscatory taxes, the possible seizure or nationalization of foreign holdings, and the possible establishment of exchange controls or freezes on the convertibility of currency. Foreign market trading hours, clearance and settlement procedures, and holiday schedules may limit the Fund's ability to buy and sell securities. Additionally, foreign issuers may be subject to different accounting, auditing, recordkeeping, and financial reporting requirements. Foreign investment risks may be greater in developing and emerging markets than in developed markets. These factors could result in a loss to the Fund.

Emerging Markets Risk. The Fund's investments in emerging markets are subject to greater risk of loss than investments in developed markets. This is due to, among other things, greater market volatility, greater risk of asset seizures and capital controls, lower trading volume, political and economic instability, greater risk of market shutdown, and more governmental limitations on foreign investments than typically found in developed markets. The economies of emerging markets may be heavily reliant upon international trade and may suffer disproportionately if international trading declines or is disrupted.

Depository Receipts Risk. The Fund may hold the securities of foreign companies in the form of depository receipts, including American Depository Receipts and Global Depository Receipts. Investing in depository receipts entails the risks associated with foreign investments, such as fluctuations in foreign currency exchange rates and political and economic risks distinct from those associated with investing in the securities of U.S. issuers. In addition, the value of the securities underlying the depository receipts may change materially when the U.S. markets are not open for trading, which will affect the value of the depository receipts.

Market Risk. The values of the Fund's holdings could decline generally or could underperform other investments. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, and/or other government actors could cause volatility in global financial markets and negative sentiment, which could have a negative impact on the Fund and could result in losses. Geopolitical and other risks, including environmental and public health risks may add to instability in world economies and markets generally. Changes in value may be temporary or may last for extended periods. Further, the Fund is susceptible to the risk that certain investments may be difficult or impossible to sell at a favorable time or price. Market developments may also cause the Fund's investments to become less liquid and subject to erratic price movements

Equity Securities Risk. The values of equity securities are subject to factors such as market fluctuations, changes in interest rates and perceived trends in stock prices. Equity securities may be more volatile than other asset classes and are generally subordinate in rank to debt and other securities of the same issuer.

Fund Summary

KraneShares Global Carbon Transformation ETF

ETF Risk. As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for exchange-traded funds (“ETFs”), such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

International Closed Market Trading Risk. To the extent the Fund’s investments trade in markets that are closed when the Fund and Exchange are open, there are likely to be deviations between current pricing of an underlying security and the prices at which the underlying securities are valued for purposes of the Fund’s NAV. As a result, Shares may appear to trade at a significant discount or premium to NAV greater than those incurred by other ETFs. In addition, shareholders may not be able to purchase or redeem their shares of the Fund, or purchase or sell shares of the Fund on the Exchange, on days when the NAV of the Fund could be significantly affected by events in the relevant non-U.S. markets.

Premium/Discount Risk. There may be times when the market price of the Fund’s shares is more than the NAV intra-day (at a premium) or less than the NAV intra-day (at a discount). As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop loss orders to sell Fund shares may be executed at prices well below NAV.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of shares. Secondary market trading is subject to bid-ask spreads and trading in Fund shares may be halted by the Exchange because of market conditions or other reasons. If a trading halt occurs, a shareholder may temporarily be unable to purchase or sell shares of the Fund. In addition, although the Fund’s shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained or that the Fund’s shares will continue to be listed.

Small Fund Risk. The Fund is small and does not yet have a significant number of shares outstanding. Small funds are at greater risk than larger funds of wider bid-ask spreads for its shares, trading at a greater premium or discount to NAV, liquidation and/or a stop to trading.

High Portfolio Turnover Risk. The Fund may incur high portfolio turnover rates, which may increase the Fund’s brokerage commission costs and negatively impact the Fund’s performance. Such portfolio turnover also may generate net short-term capital gains.

Derivatives Risk. The use of derivatives (including swaps, futures, forwards, structured notes and options) may involve leverage, which includes risks that are different from, and greater than, the risks associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value and valuation may be

Fund Summary

KraneShares Global Carbon Transformation ETF

more difficult in times of market turmoil. There may be imperfect correlation between the derivative and that of the reference asset, resulting in unexpected returns that could materially adversely affect the Fund. Certain derivatives (such as swaps and options) are bi-lateral agreements that expose the Fund to counterparty risk, which is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of derivative. In that case, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations. That risk is generally thought to be greater with over-the-counter (OTC) derivatives than with derivatives that are exchange traded or centrally cleared. Counterparty risks are compounded by the fact that there are only a limited number of ways available to invest in certain reference assets and, therefore, there may be few counterparties to swaps or options based on those reference assets. Many derivatives are subject to segregation requirements that require the Fund to segregate the market or notional value of the derivatives, which could impede the portfolio management of the Fund.

Non-Diversified Fund Risk. Because the Fund is non-diversified and may invest a greater portion of its assets in fewer issuers than a diversified fund, changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

Valuation Risk. Independent market quotations for certain investments held by the Fund may not be readily available, and such investments may be fair valued or valued by a pricing service at an evaluated price. These valuations involve subjectivity and different market participants may assign different prices to the same investment. As a result, there is a risk that the Fund may not be able to sell an investment at the price assigned to the investment by the Fund.

Securities Lending Risk. To the extent the Fund lends its securities, it may be subject to the following risks: (1) the securities in which the collateral is invested may not perform sufficiently to cover the applicable rebate rates paid to borrowers and related administrative costs; (2) delays may occur in the recovery of securities from borrowers, which could interfere with the Fund's ability to vote proxies or to settle transactions; and (3) although borrowers of the Fund's securities typically provide collateral in the form of cash that is reinvested in securities, there is the risk of possible loss of rights in the collateral should the borrower fail financially.

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Performance Information

Once the Fund has completed a full calendar year of operations, a bar chart and table will be included in this Prospectus that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the variability of the Fund's return to a broad measure of market performance. Once available, the Fund's current performance information will be available at www.kraneshares.com. Past performance does not necessarily indicate how the Fund will perform in the future.

Fund Summary

KraneShares Global Carbon Transformation ETF

Management

Investment Adviser

Krane Funds Advisors, LLC (“Krane” or “Adviser”) serves as the investment adviser to the Fund.

Portfolio Managers

Roger Mortimer, Portfolio Manager at the Adviser, and Luke Oliver, Managing Director at the Adviser, have served as the portfolio managers of the Fund since inception and they are primarily responsible for the day-to-day management of the Fund.

Purchase and Sale of Fund Shares

Shares may be purchased and redeemed from the Fund only in “Creation Units” of 50,000 shares, or multiples thereof. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on the Exchange. Individual shares can be bought and sold throughout the trading day like other publicly traded securities through a broker-dealer on the Exchange. These transactions do not involve the Fund. The price of an individual Fund share is based on market prices, which may be different from its NAV. As a result, the Fund’s shares may trade at a price greater than the NAV (at a premium) or less than the NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”). Most investors will incur customary brokerage commissions and charges when buying or selling shares of the Fund through a broker-dealer.

Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid ask spreads, are available on the Fund’s website at www.kraneshares.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account, which may be taxable upon withdrawal.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary’s website for more information.

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

Investment Objective

The KraneShares Global Carbon ETF (the “Fund”) seeks to provide a total return that, before fees and expenses, tracks the performance of the IHS Markit Global Carbon Index (the “Index”), which is an index comprised of futures contracts on emission allowances issued by various “cap and trade” regulatory regimes that seek to reduce greenhouse gas emissions over time in an effort to curb climate change.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.78%
Distribution and/or Service (12b-1) Fees*	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.78%

* Pursuant to a Distribution Plan, the Fund may bear a Rule 12b-1 fee not to exceed 0.25% per year of the Fund's average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees has not currently approved the commencement of any payments under the Distribution Plan.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$80	\$249	\$433	\$966

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 0% of the average of its portfolio.

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

Principal Investment Strategies

In seeking to achieve its investment objective, the Fund attempts to maintain exposure to carbon credit futures that are substantially the same as those included in the Index, which is an index comprised of futures contracts on emission allowances issued by various “cap and trade” regulatory regimes that seek to reduce greenhouse gas emissions over time. The Fund may also invest directly or indirectly in certain debt instruments.

The Index is designed to measure the performance of a portfolio of liquid carbon credit futures that require “physical delivery” of emission allowances issued under cap and trade regimes. An emission allowance or carbon credit is a unit of emissions (typically one ton of CO₂) that the owner of the allowance or credit is permitted to emit. A cap and trade regime seeks to gradually reduce such emission allowances or carbon credits over time to incentivize companies to reduce greenhouse gas emissions in an effort to curb climate change. The Index includes only carbon credit futures that mature in December of the next one to two years and that have a minimum average monthly trading volume over the previous six months of at least \$10 million. The Index weights eligible carbon credit futures based on their average monthly trading volume during the relevant six-month period, subject to a 5% minimum weight per regime and a 65% maximum weight to any one of the following geographic regions: (1) Europe, the Middle East and Africa, (2) the Americas, and (3) the Asia-Pacific. In addition, no single carbon credit futures contract expiring in a particular year will receive an allocation of less than 5% or more than 60% at the semi-annual rebalancing or annual reconstitution of the Index.

As of June 29, 2022, the Index included carbon credit futures linked to the value of emissions allowances issued under the following cap and trade regimes: the European Union Emissions Trading System; the California Carbon Allowance; Regional Greenhouse Gas Initiative; and the UK Emissions Trading Scheme cap and trade regimes. As the global carbon credit market grows, additional carbon credit futures, are expected to enter the Index, and the Fund’s portfolio when they have a minimum average monthly trading volume of at least \$10 million over the relevant six-month period.

The Fund will utilize a subsidiary (the “Subsidiary”) for purposes of investing in carbon credit futures. The Subsidiary is a corporation operating under Cayman Islands law that is wholly-owned and controlled by the Fund. The Subsidiary is advised by the Adviser.

The Fund’s investment in the Subsidiary may not exceed 25% of the value of its total assets (ignoring any subsequent market appreciation in the Subsidiary’s value), which limitation is imposed by the Internal Revenue Code of 1986, as amended, and is measured at the end of each quarter. The Subsidiary has the same investment objective as the Fund and will follow the same investment policies and restrictions as the Fund. Except as noted, for purposes of this Prospectus, references to the Fund’s investment strategies and risks include those of its Subsidiary, and references to the Fund include the Subsidiary.

What is a “cap and trade” regime?

In a “cap and trade” regime, a limit (“cap”) is typically set by a regulator, such as a government entity or supranational organization, on the total amount of specific greenhouse gases, such as CO₂, that can be emitted by regulated entities, such as manufacturers or energy producers. Capping and reducing the cap on greenhouse gases is viewed as a key policy tool for reaching climate change objectives. The regulator then issues or sells “emission allowances” to regulated entities which may then buy or sell (“trade”) the emission allowances on the open market. To the extent that the regulator may then reduce the cap on emission allowances, regulated entities are thereby incentivized to reduce their emissions; otherwise they must purchase emission allowances on the open market, where the price of such allowances will likely be increasing as a result of demand, and regulated entities that reduce their emissions will be able to sell unneeded emission allowances for profit. Commodity futures contracts linked to the value of emission allowances are known as “carbon credit futures”.

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

While the Fund will generally seek to obtain exposure to the same carbon credit futures that are in the Index, the Fund and Subsidiary may not replicate the Index. For example, the Fund may invest in carbon credit futures with different maturity dates (i.e., not one of the next two Decembers), the Fund may weight the carbon credit futures differently than the Index, or the Fund may purchase carbon credit futures on different dates than the rebalancing date for the Index.

The Fund may also invest in other instruments that are consistent with its investment objective. For example, the Fund may invest in emission allowances issued under a cap and trade regime, futures contracts that are not carbon credit futures, options on futures contracts, swap contracts, and other investment companies and notes, which may or may not be exchange-traded. The debt instruments in which the Fund intends to invest indirectly, through short-term bond funds and exchange-traded funds ("ETFs"), include government securities and corporate or other non-government fixed-income securities with maturities of up to 12 months. The Fund may also invest in cash and cash equivalents, including money market funds and repurchase agreements.

The Commodities Futures Trading Commission (the "CFTC") has adopted certain requirements that subject registered investment companies and their advisers to regulation by the CFTC if a registered investment company invests more than a prescribed level of its net assets in CFTC-regulated futures, options and swaps, or if a registered investment company markets itself as providing investment exposure to such instruments. Due to the Fund's potential use of CFTC-regulated futures and swaps above CFTC Rule 4.5 limits, it will be considered a "commodity pool" under the Commodity Exchange Act upon commencement of operations.

The Fund is non-diversified. To the extent the Index is concentrated in a particular industry, the Fund is expected to be concentrated in that industry (using the notional value of any futures in which it invests).

Principal Risks

As with all exchange traded funds ("ETFs"), a shareholder of the Fund is subject to the risk that his or her investment could lose money. The Fund may not achieve its investment objective and an investment in the Fund is not by itself a complete or balanced investment program. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves the risk of total loss. In addition to these risks, the Fund is subject to a number of additional principal risks that may affect the value of its shares, including:

Carbon Emission Allowance and Cap and Trade Risk. There is no assurance that cap and trade regimes will continue to exist. Cap and trade was designed to attempt to put a cap on pollution by putting a price on carbon emissions, but the approach may not prove to be an effective method of reduction in GHG emissions and or in achieving climate change objectives. As a result or due to other factors, cap and trade regimes may be terminated or may not be renewed upon their expiration. New technologies may arise that may diminish or eliminate the need for cap and trade markets. Ultimately, the cost of emissions credits is determined by the cost of actually reducing emissions levels. If the price of credits becomes too high, it will be more economical for companies to develop or invest in green technologies, thereby suppressing the demand for credits and adversely affecting the price of the Fund.

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

Cap and trade regimes set emission limits (i.e., the right to emit a certain quantity of GHG emissions), which can be allocated or auctioned to the parties regulated under the regime up to the total emissions cap. This allocation may be larger or smaller than is needed for a stable price of credits and can lead to large price volatility, which could affect the value of the Fund. Depending upon the industries covered under each cap and trade mechanism represented in the Index, unpredictable demand for their products and services can affect the value of GHG emissions credits. For example, very mild winters or very cool summers can decrease demand for electric utilities and therefore require fewer carbon credits to offset reduced production and GHG emissions.

Regulatory Risk. The Fund is subject to the risk that a change in U.S. law and related regulations will impact the way the Fund operates, increase the particular costs of the Fund's operations and/or change the competitive landscape. Additional legislative or regulatory changes could occur that may materially and adversely affect the Fund.

Climate Change Regulatory Risk. Regulatory risk related to changes in regulation and enforcement of cap and trade regimes could adversely affect market behavior. If fines or other penalties for non-compliance are not enforced, incentives to purchase GHG credits will deteriorate, which could result in a decline in the price of emissions credits and a drop in the value of the Fund. In addition, as cap and trade markets develop, new regulation with respect to these markets may arise, which could have a negative effect on the value and liquidity of the cap and trade markets and the Fund.

Subsidiary Investment Risk. By investing in the Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary's investments. Since the Subsidiary is organized under the law of the Cayman Islands and is not registered with the SEC under the Investment Company Act of 1940, as amended (the "1940 Act"), the Fund will not receive all of the protections offered to shareholders of registered investment companies. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to operate as intended, which may negatively affect the Fund and its shareholders.

Derivatives Risk. The use of derivatives (including swaps, futures, forwards, structured notes and options) may involve leverage, which includes risks that are different from, and greater than, the risks associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value and valuation may be more difficult in times of market turmoil. There may be imperfect correlation between the derivative and that of the reference asset, resulting in unexpected returns that could materially adversely affect the Fund. Certain derivatives (such as swaps and options) are bi-lateral agreements that expose the Fund to counterparty risk, which is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of derivative. In that case, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations. That risk is generally thought to be greater with over-the-counter (OTC) derivatives than with derivatives that are exchange traded or centrally cleared. Counterparty risks are compounded by the fact that there are only a limited number of ways available to invest in certain reference assets and, therefore, there may be few counterparties to swaps or options based on those reference assets. Many derivatives are subject to segregation requirements that require the Fund to segregate the market or notional value of the derivatives, which could impede the portfolio management of the Fund.

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

Futures Strategy Risk. The use of futures contracts is subject to special risk considerations. The primary risks associated with the use of futures contracts include: (a) an imperfect correlation between the change in market value of the reference asset and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the inability to predict correctly the direction of market prices, interest rates, currency exchange rates and other economic factors; and (e) if the Fund has insufficient cash, it may have to sell securities or financial instruments from its portfolio to meet daily variation margin requirements, which may lead to the Fund selling securities or financial instruments at a loss.

As a futures contract the Fund owns approaches its settlement date, the Fund may sell that futures contract and reinvest the proceeds in a similar contract with a more distant settlement date. This process is referred to as “rolling” a futures contract. The successful use of such a strategy depends upon the Adviser’s skill and experience. Although the Fund will attempt to roll from an expiring futures contract to another contract that the Adviser believes will generate the greatest yield for the Fund, the Fund nevertheless may incur a cost to “roll” the contract. In a commodity futures market where current month expiring contracts trade at a lower price than next month’s contract, a situation referred to as “contango,” then, absent the impact of the overall movement in commodity prices, the Fund may experience an adverse impact because it would be selling less expensive contracts and buying more expensive contracts. In the event of a prolonged period of contango, and absent the impact of rising or falling commodity prices, there could be a significant negative impact on the Fund when it “rolls” its futures contract positions.

Commodity-Linked Derivatives Risk. The value of a commodity-linked derivative investment typically is based upon the price movements of a physical commodity and may be affected by changes in overall market movements, volatility of the Index, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, embargoes, tariffs and international economic, political and regulatory developments. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. Commodity-linked derivatives also may be subject to credit and interest rate risks that in general affect the values of debt securities.

Commodity Pool Registration Risk. Under amended regulations promulgated by the CFTC, the Fund and the Subsidiary will be considered commodity pools upon commencement of operations, and therefore each will be subject to regulation under the Commodity Exchange Act and CFTC rules. Krane will register as a commodity pool operator and will manage the Fund and the Subsidiary in accordance with CFTC rules, as well as the rules that apply to registered investment companies. Commodity pools are subject to additional laws, regulations and enforcement policies, all of which may potentially increase compliance costs and may affect the operations and financial performance of the Fund and the Subsidiary. Additionally, positions in futures and other contracts may have to be liquidated at disadvantageous times or prices to prevent the Fund from exceeding any applicable position limits established by the CFTC. Such actions may subject the Fund to substantial losses.

Geographic Focus Risk. The Fund’s investments will be focused in a particular country, countries, or region and therefore the Fund may be susceptible to adverse market, political, regulatory, and geographic events affecting that country, countries or region. Such geographic focus also may subject the Fund to a higher degree of volatility than a more geographically diversified fund.

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

European Union Risk. Because the Fund will gain exposure to carbon credit futures issued under the European Union Emissions Trading System “cap and trade” program, the Fund’s performance also may be negatively impacted by factors affecting the European Union. The economies of the European Union are dependent to a significant extent on those of certain key trading partners, including China, the United States, and other European countries. A reduction in spending on products and services exported from the European Union, or volatility in the financial markets of member countries, may have an adverse impact on the broader European Union economy and could adversely affect the Fund. Separately, the European Union faces issues involving its membership, structure, procedures and policies. The United Kingdom (UK) officially withdrew from the European Union on January 31, 2020. Upon the UK’s withdrawal from the European Union, the European Union and the UK entered into a transition phase, which concluded on December 31, 2020, and the UK and the European Union agreed upon a Trade and Cooperation Agreement that became fully effective on May 1, 2021. The UK, European Union and broader global economy may still experience volatility in foreign exchange markets as a result of these events. The UK’s withdrawal may also destabilize some or all of the other European Union member countries and/or the Eurozone. The exit of additional member states from the European Union would subject its currency and banking system to increased risk and would likely result in increased volatility, illiquidity and potentially lower economic growth in the affected markets. Additionally, the reintroduction of national currencies in one or more European Union countries or the abandonment of the Euro as a currency could adversely affect the Fund.

California Risk. Because the Fund will gain exposure to carbon credit futures issued under the California Carbon Allowance “cap and trade” program, the Fund’s performance also may be negatively impacted by factors affecting California. For example, natural disasters may disrupt the local, state or regional economy or certain sectors of the economy and may impact the prices of such carbon credit futures. California’s budget and fiscal operations face certain structural impediments and rely on revenue sources which have been historically sensitive to the economic environment. California’s diverse economy is the largest in the United States and one of the largest in the world with major components including high technology, trade, entertainment, manufacturing, tourism, construction, agriculture and services. Any downturn in these sectors or related industries may adversely affect the economy of the state and the prices of such carbon credit futures.

Fixed Income Securities Risk. Fixed income securities are subject to credit risk and interest rate risk. Credit risk refers to the possibility that the issuer of a security will not make timely interest payments or repay the principal of the debt issued (i.e., default on its obligations). A downgrade or default on securities held by the Fund could adversely affect the Fund’s performance. Generally, the longer the maturity and the lower the credit quality of a security, the more sensitive it is to credit risk. Interest rate risk refers to fluctuations in the value of a debt resulting from changes in the level of interest rates. When interest rates go up, the prices of most debt instruments generally go down; and when interest rates go down, the prices of most debt instruments generally go up. Debt instruments with longer durations tend to be more sensitive to interest rate changes, typically making them more volatile. Interest rates have recently increased and may continue increasing, thereby heightening the risks associated with rising interest rates.

Foreign Investments Risk. Investments in non-U.S. instruments may be less liquid than U.S. investments, may have less governmental regulation and oversight, and are typically subject to different investor protection standards. Investments in non-U.S. instruments may involve risk of loss due to foreign currency fluctuations and political or economic instability. Foreign market trading hours, clearance and settlement procedures, and holiday schedules may limit the Fund’s ability to buy and sell investments. These factors could result in a loss to the Fund.

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

Concentration Risk. The Fund's assets are expected to be concentrated in an industry or group of industries to the extent that the Index concentrates in a particular industry or group of industries. The securities of companies in an industry or group of industries could react similarly to market developments. Thus, the Fund is subject to loss due to adverse occurrences that may affect that industry or group of industries or sector. As of the date of this prospectus, the Index was concentrated in carbon credit futures. The prices and performance of carbon credit futures may be particularly affected by developments in the following sector:

Energy Sector Risk. Investments in, and/or exposure to, the energy sector, which includes energy commodities such as oil, gasoline, and carbon credits, may be highly volatile and can change quickly and unpredictably due to a number of factors, including the legislative or regulatory changes, adverse market conditions, increased competition affecting the energy sector, financial, accounting and tax matters and other events that the Fund cannot control. In addition, the value of energy commodities may fluctuate widely due to changes in supply and demand.

The energy sector is typically cyclical and highly dependent upon commodities and energy prices. Issuers in this sector are usually subject to substantial government regulation and contractual fixed pricing, which may increase the cost of business and limit these issuers' earnings, and a significant portion of their revenues depends on a relatively small number of customers, including governmental entities and utilities.

Currency Risk. The Fund's assets will be invested in instruments denominated in foreign currencies and the income received by the Fund may be in foreign currencies. The Fund will compute and expects to distribute its income in U.S. dollars, and the computation of income will be made on the date that the income is earned by the Fund at the foreign exchange rate in effect on that date. The Fund will conduct its foreign currency exchange transactions either on a spot (*i.e.*, cash) basis at the spot rate prevailing in the foreign currency exchange market at the time the Fund wishes to enter into the transaction, or through forward, futures or options contracts to purchase or sell foreign currencies.

The Fund's NAV is determined on the basis of the U.S. dollar. The Fund may therefore lose value if the local currency of a foreign investment depreciates against the U.S. dollar, even if the local currency value of the Fund's holdings goes up. Currency exchange rates can be very volatile and can change quickly and unpredictably, which may adversely affect the Fund. The Fund may also be subject to delays in converting or transferring U.S. dollars to foreign currencies and vice versa. This may adversely affect the Fund's performance.

Non-Diversified Fund Risk. The Fund is non-diversified and may concentrate its investments to a greater extent than a diversified fund. Changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

ETF Risk. As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

Participant concentration risk may be heightened for exchange-traded funds (“ETFs”), such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

Cash Transactions Risk. Like other ETFs, the Fund sells and redeems its shares only in large blocks called Creation Units and only to “Authorized Participants.” Unlike many other ETFs, however, the Fund expects to effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities. Thus, an investment in the Fund may be less tax-efficient than an investment in other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. As a result, the Fund may pay out higher capital gains distributions than ETFs that redeem in-kind. Further, paying redemption proceeds in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to obtain the cash needed to distribute redemption proceeds at an inopportune time.

International Closed Market Trading Risk. To the extent the Fund’s investments trade in markets that are closed when the Fund and Exchange are open, there are likely to be deviations between current pricing of an underlying security and the prices at which the underlying securities are valued for purposes of the Fund’s NAV. As a result, Shares may appear to trade at a significant discount or premium to NAV greater than those incurred by other ETFs. In addition, shareholders may not be able to purchase or redeem their shares of the Fund, or purchase or sell shares of the Fund on the Exchange, on days when the NAV of the Fund could be significantly affected by events in the relevant non-U.S. markets.

Premium/Discount Risk. There may be times when the market price of the Fund’s shares is more than the NAV intra-day (at a premium) or less than the NAV intra-day (at a discount). As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop loss orders to sell Fund shares may be executed at prices well below NAV.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of shares. Secondary market trading is subject to bid-ask spreads and trading in Fund shares may be halted by the Exchange because of market conditions or other reasons. If a trading halt occurs, a shareholder may temporarily be unable to purchase or sell shares of the Fund. In addition, although the Fund’s shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained or that the Fund’s shares will continue to be listed.

Liquidity Risk. The Fund’s investments are subject to liquidity risk, which exists when an investment is or becomes difficult or impossible to purchase or sell at an advantageous time and price. If a transaction is particularly large or if the relevant market is or becomes illiquid, it may not be possible to initiate a transaction or liquidate a position, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. Liquidity risk may be the result of, among other things, market turmoil, the reduced number and capacity of traditional market participants, or the lack of an active trading market. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, new legislation or regulatory changes inside or outside the U.S. Liquid investments may become less liquid after

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

being purchased by the Fund, particularly during periods of market stress. In addition, if a number of securities held by the Fund stop trading, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt. Certain countries in which the Fund may invest may be subject to extended settlement delays and/or foreign holidays, during which the Fund will unlikely be able to convert holdings to cash.

Passive Investment Risk. There is no guarantee that the Index will create the desired exposure and the Fund is not actively managed. It does not seek to “beat” the Index or take temporary defensive positions when markets decline. Therefore, the Fund may purchase or hold securities with current or projected underperformance.

Market Risk. The values of the Fund’s holdings could decline generally or could underperform other investments. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, and/or other government actors could cause volatility in global financial markets, negative sentiment and higher levels of Fund redemptions, which could have a negative impact on the Fund and could result in losses. Geopolitical and other risks, including environmental and public health risks may add to instability in world economies and markets generally. Changes in value may be temporary or may last for extended periods. Further, the Fund is susceptible to the risk that certain investments may be difficult or impossible to sell at a favorable time or price. Market developments may also cause the Fund’s investments to become less liquid and subject to erratic price movements. Such market developments may also cause the Fund to encounter difficulties in timely honoring redemptions.

High Portfolio Turnover Risk. The Fund may incur high turnover rates, which may increase the Fund’s brokerage commission costs and negatively impact the Fund’s performance. Such portfolio turnover also may generate net short-term capital gains.

Tracking Error Risk. The Fund’s return may not match or achieve a high degree of correlation with the return of the Index. This may be due to, among other factors, the Fund investments in carbon credit futures with different maturity dates, the Fund weighing the carbon credit futures differently than the Index, and the Fund’s purchase of carbon credit futures on different dates than the rebalancing date for the Index. To the extent that the Fund invests in other instruments that are consistent with its investment objective, such as futures contracts that are not carbon credit futures, options on futures contracts, swap contracts, and other investment companies and notes, the Fund’s ability to track the Index may be adversely affected.

Valuation Risk. Independent market quotations for certain investments held by the Fund may not be readily available, and such investments may be fair valued or valued by a pricing service at an evaluated price. These valuations involve subjectivity and different market participants may assign different prices to the same investment. As a result, there is a risk that the Fund may not be able to sell an investment at the price assigned to the investment by the Fund. In addition, the securities in which the Fund invests may trade on days that the Fund does not price its shares; as a result, the value of Fund shares may change on days when investors cannot purchase or sell their Fund holdings.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain income, asset diversification and distribution requirements each year. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income, which would adversely affect the Fund’s performance.

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

The Fund intends to treat its income from the Subsidiary as qualifying income. The tax treatment of the Fund's investment in the Subsidiary may be adversely affected by future legislation, court decisions, Treasury Regulations and/or guidance issued by the IRS that could affect whether income derived from such investments is "qualifying income" under Subchapter M of the Internal Revenue Code, or otherwise affect the character, timing and/or amount of the Fund's taxable income or any gains or distributions made by the Fund.

U.S. Government Obligations Risk. Obligations of U.S. Government agencies and authorities receive varying levels of support and may not be backed by the full faith and credit of the U.S. Government, which could affect the Fund's ability to recover should they default. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. Additionally, market prices and yields of securities supported by the full faith and credit of the U.S. government may decline or be negative for short or long periods of time.

Investments in Investment Companies Risk. The Fund may invest in other investment companies, including those advised, sponsored or otherwise serviced by Krane. The Fund will indirectly be exposed to the risks of investments by such funds and will incur its pro rata share of the underlying fund's expenses. Krane is subject to conflicts of interest in allocating Fund assets to investment companies that are advised, sponsored or otherwise serviced by Krane and/or its affiliates. To the extent that the Fund invests in investment companies or other pooled investment vehicles that are not registered pursuant to the 1940 Act, including foreign investment companies, it will not enjoy the protections of the U.S. law.

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. Holding cash or cash equivalents, even strategically, may lead to missed investment opportunities. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

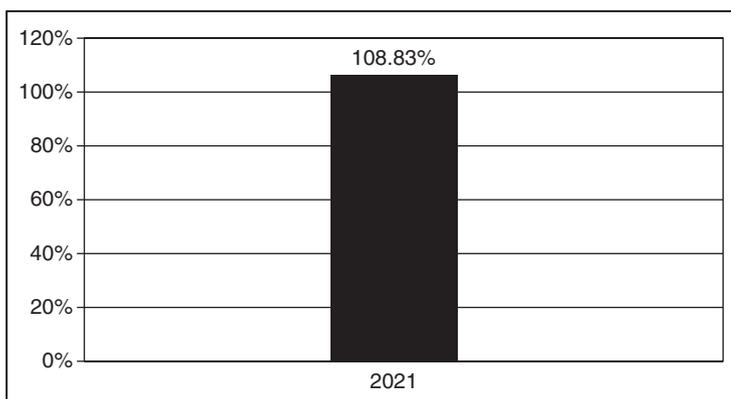

Performance Information

The following bar chart and table illustrate the variability of the Fund's returns and indicate the risks of investing in the Fund by showing how the Fund's average annual total returns compare with those of a broad measure of market performance. All returns include the reinvestment of dividends and distributions. As always, please note that the Fund's past performance (before and after taxes) is not necessarily an indication of how it will perform in the future. Prior to December 3, 2021, the Fund was actively managed and sought to outperform the Index through investments in debt instruments. Updated performance information is available at no cost by visiting www.kraneshares.com.

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

Total Annual Returns For Calendar Years Ended December 31

As of June 30, 2022, the Fund's calendar year-to-date total return was -1.64%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter Ended/Year
Highest Return	28.78%	6/30/2021
Lowest Return.....	11.82%	9/30/2021

Average Annual Total Returns for the periods ended December 31, 2021

KraneShares Global Carbon Strategy ETF	1 year	Since Inception (7-30-2020)
Return Before Taxes	108.83%	92.57%
Return After Taxes on Distributions.....	108.41%	92.30%
Return After Taxes on Distributions and Sale of Fund Shares.....	64.42%	72.48%
IHS Markit Global Carbon Index (Reflects no deduction for fees, expenses or taxes).....	107.15%	90.40%

Average annual total returns are shown on a before- and after-tax basis for the Fund. After-tax returns for the Fund are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold shares through tax-deferred arrangements, such as 401(k) plans or individual retirement plans.

Management

Investment Adviser and Sub-Adviser

Krane Funds Advisors, LLC ("Krane" or "Adviser") serves as the investment adviser to the Fund. Climate Finance Partners LLC ("Sub-Adviser") serves as the non-discretionary investment sub-adviser to the Fund.

Fund Summary

KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF)

Portfolio Managers

James Maund, Head of Capital Markets at the Adviser, has served as the lead portfolio manager of the Fund since the Fund's inception. Jonathan Shelon, Chief Operating Officer of the Adviser, supports Mr. Maund and Krane's investment team for the Fund and has been a portfolio manager of the Fund since the Fund's inception. Luke Oliver, Managing Director and Head of Strategy at the Adviser, has served as a portfolio manager of the Fund since August 1, 2022.

Purchase and Sale of Fund Shares

Shares may be purchased and redeemed from the Fund only in "Creation Units" of 50,000 shares, or multiples thereof. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on the Exchange. Individual shares can be bought and sold throughout the trading day like other publicly traded securities through a broker-dealer on the Exchange. These transactions do not involve the Fund. The price of an individual Fund share is based on market prices, which may be different from its NAV. As a result, the Fund's shares may trade at a price greater than the NAV (at a premium) or less than the NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). Most investors will incur customary brokerage commissions and charges when buying or selling shares of the Fund through a broker-dealer.

Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid ask spreads, are available on the Fund's website at www.kraneshares.com.

Tax Information

Fund distributions are generally taxable as ordinary income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account, which may be taxable upon withdrawal.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary's website for more information.

Fund Summary

KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)

Investment Objective

The KraneShares European Carbon Allowance ETF (the “Fund”) seeks to provide a total return that, before fees and expenses, tracks the performance of the IHS Markit Carbon EUA Index (the “Index”), which is an index comprised of futures contracts on emission allowances issued by a “cap and trade” regulatory regime that seeks to reduce greenhouse gas emissions over time in an effort to curb climate change.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.78%
Distribution and/or Service (12b-1) Fees*.	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.78%

* Pursuant to a Distribution Plan, the Fund may bear a Rule 12b-1 fee not to exceed 0.25% per year of the Fund's average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees has not currently approved the commencement of any payments under the Distribution Plan.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$80	\$249	\$433	\$966

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund's performance. For the period October 4, 2021 to March 31, 2022, the Fund's portfolio turnover rate was 0% of the average value of its portfolio.

Fund Summary

KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)

Principal Investment Strategies

In seeking to achieve its investment objective, the Fund attempts to maintain exposure to carbon credit futures that are substantially the same as those included in the Index, which is an index comprised of futures contracts on emission allowances issued by a “cap and trade” regulatory regime that seeks to reduce greenhouse gas emissions over time. The Index is designed to measure the performance of a portfolio of futures contracts on carbon credits issued under the European Union Emissions Trading System “cap and trade” regime (“carbon credit futures”). An emission allowance or carbon credit is a unit of emissions (typically one ton of CO₂) that the owner of the allowance or credit is permitted to emit. A cap and trade regime seeks to gradually reduce such emission allowances or carbon credits over time to incentivize companies to reduce greenhouse gas emissions in an effort to curb climate change. The Index includes only carbon credit futures that mature in December of the next one to two years. The Fund may also invest directly and indirectly in certain debt instruments.

The Fund will utilize a subsidiary (the “Subsidiary”) for purposes of investing in carbon credit futures. The Subsidiary is a corporation operating under Cayman Islands law that is wholly-owned and controlled by the Fund. The Subsidiary is advised by the Adviser. The Fund’s investment in the Subsidiary may not exceed 25% of the value of its total assets (ignoring any subsequent market appreciation in the Subsidiary’s value), which limitation is imposed by the Internal Revenue Code of 1986, as amended, and is measured at the end of each quarter. The Subsidiary has the same investment objective as the Fund and will follow the same investment policies and restrictions as the Fund. Except as noted, for purposes of this Prospectus, references to the Fund’s investment strategies and risks include those of its Subsidiary, and references to the Fund include the Subsidiary.

While the Fund will generally seek to obtain exposure to the same carbon credit futures that are in the Index, the Fund and Subsidiary may not replicate the Index. For example, the Fund may invest in carbon credit futures with different maturity dates (i.e., not one of the next two Decembers), the Fund may weight the carbon credit futures differently than the Index, or the Fund may purchase carbon credit futures on different dates than the rebalancing date for the Index.

What is a “cap and trade” regime?

In a “cap and trade” regime, a limit (“cap”) is typically set by a regulator, such as a government entity or supranational organization, on the total amount of specific greenhouse gases, such as CO₂, that can be emitted by regulated entities, such as manufacturers or energy producers. Capping and reducing the cap on greenhouse gases is viewed as a key policy tool for reaching climate change objectives. The regulator then issues or sells “emission allowances” to regulated entities which may then buy or sell (“trade”) the emission allowances on the open market. To the extent that the regulator may then reduce the cap on emission allowances, regulated entities are thereby incentivized to reduce their emissions; otherwise they must purchase emission allowances on the open market, where the price of such allowances will likely be increasing as a result of demand, and regulated entities that reduce their emissions will be able to sell unneeded emission allowances for profit. The opposite could also occur and the regulator may increase the cap on emission allowances, which would likely increase emissions and decrease the price of allowances. Commodity futures contracts linked to the value of emission allowances are known as carbon credit futures.

Fund Summary

KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)

The Fund may also invest in other instruments that are consistent with its investment objective. For example, the Fund may invest in emission allowances issued under a cap and trade regime, futures contracts that are not carbon credit futures, options on futures contracts, swap contracts, and other investment companies and notes, which may or may not be exchange-traded.

The debt instruments in which the Fund intends to invest include government securities and corporate or other non-government fixed-income securities with maturities of up to 12 months. The Fund may invest in debt instruments indirectly through short-term bond funds and exchange-traded funds (“ETFs”). The Fund may also invest in cash and cash equivalents, including money market funds.

The Commodities Futures Trading Commission (the “CFTC”) has adopted certain requirements that subject registered investment companies and their advisers to regulation by the CFTC if a registered investment company invests more than a prescribed level of its net assets in CFTC-regulated futures, options and swaps, or if a registered investment company markets itself as providing investment exposure to such instruments. Due to the Fund’s potential use of CFTC-regulated futures and swaps above CFTC Rule 4.5 limits, it will be considered a “commodity pool” under the Commodity Exchange Act upon commencement of operations.

Under normal circumstances, the Fund will invest at least 80% of its net assets (plus borrowings, if any) in instruments that provide exposure to European carbon allowances. The notional value of any investments by the Fund (including its Subsidiary) that provide such exposure, including investments in derivatives (such as futures contracts on allowances issued by the European Union as part of its Emission Trading System), will be counted toward satisfaction of this 80% policy. In addition, investments in futures contracts on carbon allowances (or credits) issued under a “cap and trade” regime of any country in Europe would be counted toward satisfaction of this 80% policy.

The Fund is non-diversified. To the extent the Index is concentrated in a particular industry, the Fund is expected to be concentrated in that industry (using the notional value of any futures in which it invests).

Principal Risks

As with all exchange traded funds (“ETFs”), a shareholder of the Fund is subject to the risk that his or her investment could lose money. The Fund may not achieve its investment objective and an investment in the Fund is not by itself a complete or balanced investment program. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves the risk of total loss. In addition to these risks, the Fund is subject to a number of additional principal risks that may affect the value of its shares, including:

Carbon Emission Allowance and Cap and Trade Risk. There is no assurance that cap and trade regimes will continue to exist. Cap and trade was designed to attempt to put a cap on pollution by putting a price on carbon emissions, but the approach may not prove to be an effective method of reduction in GHG emissions and or in achieving climate change objectives. As a result or due to other factors, cap and trade regimes may be terminated or may not be renewed upon their expiration. New technologies may arise that may diminish or eliminate the need for cap and trade markets. Ultimately, the cost of emissions credits is determined by the cost of actually reducing emissions levels. If the price of credits becomes too high, it will be more economical for companies to develop or invest in green technologies, thereby suppressing the demand for credits and adversely affecting the price of the Fund.

Fund Summary

KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)

Cap and trade regimes set emission limits (i.e., the right to emit a certain quantity of GHG emissions), which can be allocated or auctioned to the parties regulated under the regime up to the total emissions cap. This allocation may be larger or smaller than is needed for a stable price of credits and can lead to large price volatility, which could affect the value of the Fund. Depending upon the industries covered under the cap and trade regime, unpredictable demand for their products and services can affect the value of GHG emissions credits. For example, very mild winters or very cool summers can decrease demand for electric utilities and therefore require fewer carbon credits to offset reduced production and GHG emissions.

Regulatory Risk. The Fund is subject to the risk that a change in U.S. law and related regulations will impact the way the Fund operates, increase the particular costs of the Fund's operations and/or change the competitive landscape. Additional legislative or regulatory changes could occur that may materially and adversely affect the Fund.

Climate Change Regulatory Risk. Regulatory risk related to changes in regulation and enforcement of cap and trade regimes could adversely affect market behavior. If fines or other penalties for non-compliance are not enforced, incentives to purchase GHG credits will deteriorate, which could result in a decline in the price of emissions credits and a drop in the value of the Fund. In addition, as cap and trade markets develop, new regulation with respect to these markets may arise, which could have a negative effect on the value and liquidity of the cap and trade markets and the Fund.

Subsidiary Investment Risk. By investing in the Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary's investments. Since the Subsidiary is organized under the law of the Cayman Islands and is not registered with the SEC under the Investment Company Act of 1940, as amended (the "1940 Act"), the Fund will not receive all of the protections offered to shareholders of registered investment companies. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to operate as intended, which may negatively affect the Fund and its shareholders.

Derivatives Risk. The use of derivatives (including swaps, futures, forwards, structured notes and options) may involve leverage, which includes risks that are different from, and greater than, the risks associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value and valuation may be more difficult in times of market turmoil. There may be imperfect correlation between the derivative and that of the reference asset, resulting in unexpected returns that could materially adversely affect the Fund. Certain derivatives (such as swaps and options) are bi-lateral agreements that expose the Fund to counterparty risk, which is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of derivative. In that case, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations. That risk is generally thought to be greater with over-the-counter (OTC) derivatives than with derivatives that are exchange traded or centrally cleared. Counterparty risks are compounded by the fact that there are only a limited number of ways available to invest in certain reference assets and, therefore, there may be few counterparties to swaps or options based on those reference assets. Many derivatives are subject to segregation requirements that require the Fund to segregate the market or notional value of the derivatives, which could impede the portfolio management of the Fund.

Fund Summary

KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)

Futures Strategy Risk. The use of futures contracts is subject to special risk considerations. The primary risks associated with the use of futures contracts include: (a) an imperfect correlation between the change in market value of the reference asset and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the inability to predict correctly the direction of market prices, interest rates, currency exchange rates and other economic factors; and (e) if the Fund has insufficient cash, it may have to sell securities or financial instruments from its portfolio to meet daily variation margin requirements, which may lead to the Fund selling securities or financial instruments at a loss.

As a futures contract the Fund owns approaches its settlement date, the Fund may sell that futures contract and reinvest the proceeds in a similar contract with a more distant settlement date. This process is referred to as “rolling” a futures contract. The successful use of such a strategy depends upon the Adviser’s skill and experience. Although the Fund will attempt to roll from an expiring futures contract to another contract that the Adviser believes will generate the greatest yield for the Fund, the Fund nevertheless may incur a cost to “roll” the contract. In a commodity futures market where current month expiring contracts trade at a lower price than next month’s contract, a situation referred to as “contango,” then, absent the impact of the overall movement in commodity prices, the Fund may experience an adverse impact because it would be selling less expensive contracts and buying more expensive contracts. In the event of a prolonged period of contango, and absent the impact of rising or falling commodity prices, there could be a significant negative impact on the Fund when it “rolls” its futures contract positions.

Commodity-Linked Derivatives Risk. The value of a commodity-linked derivative investment typically is based upon the price movements of a physical commodity and may be affected by changes in overall market movements, volatility of the Index, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, embargoes, tariffs and international economic, political and regulatory developments. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. Commodity-linked derivatives also may be subject to credit and interest rate risks that in general affect the values of debt securities.

Commodity Pool Registration Risk. Under amended regulations promulgated by the CFTC, the Fund and the Subsidiary will be considered commodity pools upon commencement of operations, and therefore each will be subject to regulation under the Commodity Exchange Act and CFTC rules. Krane will register as a commodity pool operator and will manage the Fund and the Subsidiary in accordance with CFTC rules, as well as the rules that apply to registered investment companies. Commodity pools are subject to additional laws, regulations and enforcement policies, all of which may potentially increase compliance costs and may affect the operations and financial performance of the Fund and the Subsidiary. Additionally, positions in futures and other contracts may have to be liquidated at disadvantageous times or prices to prevent the Fund from exceeding any applicable position limits established by the CFTC. Such actions may subject the Fund to substantial losses.

Geographic Focus Risk. The Fund’s investments will be focused in a particular country, countries, or region and therefore the Fund may be susceptible to adverse market, political, regulatory, and geographic events affecting that country, countries or region. Such geographic focus also may subject the Fund to a higher degree of volatility than a more geographically diversified fund.

Fund Summary

KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)

European Union Risk. Because the Fund will gain exposure to carbon credit futures issued under the European Union Emissions Trading System “cap and trade” program, the Fund’s performance also may be negatively impacted by factors affecting the European Union. The economies of the European Union are dependent to a significant extent on those of certain key trading partners, including China, the United States, and other European countries. A reduction in spending on products and services exported from the European Union, or volatility in the financial markets of member countries, may have an adverse impact on the broader European Union economy and could adversely affect the Fund. Separately, the European Union faces issues involving its membership, structure, procedures and policies. The United Kingdom (UK) officially withdrew from the European Union on January 31, 2020. Upon the UK’s withdrawal from the European Union, the European Union and the UK entered into a transition phase, which concluded on December 31, 2020, and the UK and the European Union agreed upon a Trade and Cooperation Agreement that became fully effective on May 1, 2021. The UK, European Union and broader global economy may still experience volatility in foreign exchange markets as a result of these events. The UK’s withdrawal may also destabilize some or all of the other European Union member countries and/or the Eurozone. The exit of additional member states from the European Union would subject its currency and banking system to increased risk and would likely result in increased volatility, illiquidity and potentially lower economic growth in the affected markets. Additionally, the reintroduction of national currencies in one or more European Union countries or the abandonment of the Euro as a currency could adversely affect the Fund.

Fixed Income Securities Risk. Fixed income securities are subject to credit risk and interest rate risk. Credit risk refers to the possibility that the issuer of a security will not make timely interest payments or repay the principal of the debt issued (i.e., default on its obligations). A downgrade or default on securities held by the Fund could adversely affect the Fund’s performance. Generally, the longer the maturity and the lower the credit quality of a security, the more sensitive it is to credit risk. Interest rate risk refers to fluctuations in the value of a debt resulting from changes in the level of interest rates. When interest rates go up, the prices of most debt instruments generally go down; and when interest rates go down, the prices of most debt instruments generally go up. Debt instruments with longer durations tend to be more sensitive to interest rate changes, typically making them more volatile. Interest rates have recently increased and may continue increasing, thereby heightening the risks associated with rising interest rates.

Foreign Investments Risk. Investments in non-U.S. instruments may be less liquid than U.S. investments, may have less governmental regulation and oversight, and are typically subject to different investor protection standards. Investments in non-U.S. instruments may involve risk of loss due to foreign currency fluctuations and political or economic instability. Foreign market trading hours, clearance and settlement procedures, and holiday schedules may limit the Fund’s ability to buy and sell investments. These factors could result in a loss to the Fund.

Concentration Risk. The Fund’s assets are expected to be concentrated in carbon credit futures and its investments could react similarly to market developments. Thus, the Fund is subject to loss due to adverse occurrences that may affect that industry or group of industries or sector. The prices and performance of carbon credit futures may be particularly affected by developments in the following sector:

Fund Summary

KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)

Energy Sector Risk. Investments in, and/or exposure to, the energy sector, which includes energy commodities such as oil, gasoline, and carbon credits, may be highly volatile and can change quickly and unpredictably due to a number of factors, including the legislative or regulatory changes, adverse market conditions, increased competition affecting the energy sector, financial, accounting and tax matters and other events that the Fund cannot control. In addition, the value of energy commodities may fluctuate widely due to changes in supply and demand.

The energy sector is typically cyclical and highly dependent upon commodities and energy prices. Issuers in this sector are usually subject to substantial government regulation and contractual fixed pricing, which may increase the cost of business and limit these issuers' earnings, and a significant portion of their revenues depends on a relatively small number of customers, including governmental entities and utilities.

Currency Risk. The Fund's assets will be invested in instruments denominated in foreign currencies and the income received by the Fund may be in foreign currencies. The Fund will compute and expects to distribute its income in U.S. dollars, and the computation of income will be made on the date that the income is earned by the Fund at the foreign exchange rate in effect on that date. The Fund will conduct its foreign currency exchange transactions either on a spot (*i.e.*, cash) basis at the spot rate prevailing in the foreign currency exchange market at the time the Fund wishes to enter into the transaction, or through forward, futures or options contracts to purchase or sell foreign currencies.

The Fund's NAV is determined on the basis of the U.S. dollar. The Fund may therefore lose value if the local currency of a foreign investment depreciates against the U.S. dollar, even if the local currency value of the Fund's holdings goes up. Currency exchange rates can be very volatile and can change quickly and unpredictably, which may adversely affect the Fund. The Fund may also be subject to delays in converting or transferring U.S. dollars to foreign currencies and vice versa. This may adversely affect the Fund's performance.

Non-Diversified Fund Risk. The Fund is non-diversified and may concentrate its investments to a greater extent than a diversified fund. Changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

ETF Risk. As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for exchange-traded funds ("ETFs"), such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

Cash Transactions Risk. Like other ETFs, the Fund sells and redeems its shares only in large blocks called Creation Units and only to "Authorized Participants." Unlike many other ETFs, however, the Fund expects to effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities. Thus, an investment in the Fund may be less tax-efficient than an investment in

Fund Summary

KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)

other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. As a result, the Fund may pay out higher capital gains distributions than ETFs that redeem in-kind. Further, paying redemption proceeds in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to obtain the cash needed to distribute redemption proceeds at an inopportune time.

International Closed Market Trading Risk. Because certain of the Fund's investments trade in markets that are closed when the Fund and Exchange are open, there are likely to be deviations between current pricing of an underlying security and stale pricing, resulting in the Fund trading at a discount or premium to NAV greater than those incurred by other ETFs.

Premium/Discount Risk. There may be times when the market price of the Fund's shares is more than the NAV intra-day (at a premium) or less than the NAV intra-day (at a discount). As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop loss orders to sell Fund shares may be executed at prices well below NAV.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of shares. Secondary market trading is subject to bid-ask spreads and trading in Fund shares may be halted by the Exchange because of market conditions or other reasons. If a trading halt occurs, a shareholder may temporarily be unable to purchase or sell shares of the Fund. In addition, although the Fund's shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained or that the Fund's shares will continue to be listed.

Small Fund Risk. The Fund is small and does not yet have a significant number of shares outstanding. Small funds are at greater risk than larger funds of wider bid-ask spreads for its shares, trading at a greater premium or discount to NAV, liquidation and/or a stop to trading.

Liquidity Risk. The Fund's investments are subject to liquidity risk, which exists when an investment is or becomes difficult or impossible to purchase or sell at an advantageous time and price. If a transaction is particularly large or if the relevant market is or becomes illiquid, it may not be possible to initiate a transaction or liquidate a position, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. Liquidity risk may be the result of, among other things, market turmoil, the reduced number and capacity of traditional market participants, or the lack of an active trading market. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, new legislation or regulatory changes inside or outside the U.S. Liquid investments may become less liquid after being purchased by the Fund, particularly during periods of market stress. In addition, if a number of securities held by the Fund stop trading, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt.

Passive Investment Risk. There is no guarantee that the Index will create the desired exposure and the Fund is not actively managed. It does not seek to "beat" the Index or take temporary defensive positions when markets decline. Therefore, the Fund may purchase or hold securities with current or projected underperformance.

Fund Summary

KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)

Market Risk. The values of the Fund's holdings could decline generally or could underperform other investments. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, and/or other government actors could cause volatility in global financial markets and negative sentiment, which could have a negative impact on the Fund and could result in losses. Geopolitical and other risks, including environmental and public health risks may add to instability in world economies and markets generally. Changes in value may be temporary or may last for extended periods. Further, the Fund is susceptible to the risk that certain investments may be difficult or impossible to sell at a favorable time or price. Market developments may also cause the Fund's investments to become less liquid and subject to erratic price movements.

High Portfolio Turnover Risk. The Fund may incur high turnover rates, which may increase the Fund's brokerage commission costs and negatively impact the Fund's performance. Such portfolio turnover also may generate net short-term capital gains.

Tracking Error Risk. The Fund's return may not match or achieve a high degree of correlation with the return of the Index. This may be due to, among other factors, the Fund investments in carbon credit futures with different maturity dates, the Fund weighing the carbon credit futures differently than the Index, and the Fund's purchase of carbon credit futures on different dates than the rebalancing date for the Index. To the extent that the Fund invests in other instruments that are consistent with its investment objective, such as futures contracts that are not carbon credit futures, options on futures contracts, swap contracts, and other investment companies and notes, the Fund's ability to track the Index may be adversely affected.

Valuation Risk. Independent market quotations for certain investments held by the Fund may not be readily available, and such investments may be fair valued or valued by a pricing service at an evaluated price. These valuations involve subjectivity and different market participants may assign different prices to the same investment. As a result, there is a risk that the Fund may not be able to sell an investment at the price assigned to the investment by the Fund. In addition, the securities in which the Fund invests may trade on days that the Fund does not price its shares; as a result, the value of Fund shares may change on days when investors cannot purchase or sell their Fund holdings.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain income, asset diversification and distribution requirements each year. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income, which would adversely affect the Fund's performance.

The Fund intends to treat its income from the Subsidiary as qualifying income. The tax treatment of the Fund's investment in the Subsidiary may be adversely affected by future legislation, court decisions, Treasury Regulations and/or guidance issued by the IRS that could affect whether income derived from such investments is "qualifying income" under Subchapter M of the Internal Revenue Code, or otherwise affect the character, timing and/or amount of the Fund's taxable income or any gains or distributions made by the Fund.

U.S. Government Obligations Risk. Obligations of U.S. Government agencies and authorities receive varying levels of support and may not be backed by the full faith and credit of the U.S. Government, which could affect the Fund's ability to recover should they default. No assurance can be given that

Fund Summary

KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)

the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. Additionally, market prices and yields of securities supported by the full faith and credit of the U.S. government may decline or be negative for short or long periods of time.

Investments in Investment Companies Risk. The Fund may invest in other investment companies, including those advised, sponsored or otherwise serviced by Krane. The Fund will indirectly be exposed to the risks of investments by such funds and will incur its pro rata share of the underlying fund's expenses. Krane is subject to conflicts of interest in allocating Fund assets to investment companies that are advised, sponsored or otherwise serviced by Krane and/or its affiliates. To the extent that the Fund invests in investment companies or other pooled investment vehicles that are not registered pursuant to the 1940 Act, including foreign investment companies, it will not enjoy the protections of the U.S. law.

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. Holding cash or cash equivalents, even strategically, may lead to missed investment opportunities. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Performance Information

Once the Fund has completed a full calendar year of operations, a bar chart and table will be included in this Prospectus that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the variability of the Fund's return to a broad measure of market performance. Once available, the Fund's current performance information will be available at www.kraneshares.com. Past performance does not necessarily indicate how the Fund will perform in the future.

Management

Investment Adviser and Sub-Adviser

Krane Funds Advisors, LLC ("Krane" or "Adviser") serves as the investment adviser to the Fund. Climate Finance Partners LLC ("Sub-Adviser") serves as the non-discretionary investment sub-adviser to the Fund.

Portfolio Managers

James Maund, Head of Capital Markets at the Adviser, has served as the lead portfolio manager of the Fund since the Fund's inception. Jonathan Shelon, Chief Operating Officer of the Adviser, supports Mr. Maund and Krane's investment team for the Fund and has been a portfolio manager of the Fund since the Fund's inception. Luke Oliver, Managing Director and Head of Strategy at the Adviser, has served as a portfolio manager of the Fund since August 1, 2022.

Purchase and Sale of Fund Shares

Shares may be purchased and redeemed from the Fund only in "Creation Units" of 25,000 shares, or multiples thereof. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on the Exchange. Individual shares can be bought and sold throughout the trading

Fund Summary

KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)

day like other publicly traded securities through a broker-dealer on the Exchange. These transactions do not involve the Fund. The price of an individual Fund share is based on market prices, which may be different from its NAV. As a result, the Fund's shares may trade at a price greater than the NAV (at a premium) or less than the NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). Most investors will incur customary brokerage commissions and charges when buying or selling shares of the Fund through a broker-dealer.

Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid ask spreads, are available on the Fund's website at www.kraneshares.com.

Tax Information

Fund distributions are generally taxable as ordinary income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account, which may be taxable upon withdrawal.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary's website for more information.

Fund Summary

KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)

Investment Objective

The KraneShares California Carbon Allowance ETF (the “Fund”) seeks to provide a total return that, before fees and expenses, tracks the performance of the IHS Markit Carbon CCA Index (the “Index”), which is an index comprised of futures contracts on emission allowances issued by a “cap and trade” regulatory regime that seeks to reduce greenhouse gas emissions over time in an effort to curb climate change.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.78%
Distribution and/or Service (12b-1) Fees*	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.78%

* Pursuant to a Distribution Plan, the Fund may bear a Rule 12b-1 fee not to exceed 0.25% per year of the Fund's average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees has not currently approved the commencement of any payments under the Distribution Plan.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$80	\$249	\$433	\$966

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund's performance. For the period October 4, 2021 to March 31, 2022, the Fund's portfolio turnover rate was 0% of the average value of its portfolio.

Fund Summary

KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)

Principal Investment Strategies

In seeking to achieve its investment objective, the Fund attempts to maintain exposure to carbon credit futures that are substantially the same as those included in the Index, which is an index comprised of futures contracts on emission allowances issued by a “cap and trade” regulatory regime that seeks to reduce greenhouse gas emissions over time. The Index is designed to measure the performance of a portfolio of futures contracts on carbon credits issued under the California Carbon Allowance “cap and trade” regime (“carbon credit futures”). An emission allowance or carbon credit is a unit of emissions (typically one ton of CO₂) that the owner of the allowance or credit is permitted to emit. A cap and trade regime seeks to gradually reduce such emission allowances or carbon credits over time to incentivize companies to reduce greenhouse gas emissions in an effort to curb climate change. The Index includes only carbon credit futures that mature in December of the next one to two years. The Fund may also invest directly and indirectly in certain debt instruments.

Carbon credits issued under the California Carbon Allowance “cap and trade” regime include carbon credits issued by Quebec since the California and Quebec markets were linked pursuant to the Western Climate Initiative in 2014. Currently, carbon credits issued by Quebec each year consist of approximately 17-18% of the carbon credits issued under the California Carbon Allowance “cap and trade” regime. This percentage is subject to change and it is possible for additional markets to be added in the future.

The Fund will utilize a subsidiary (the “Subsidiary”) for purposes of investing in carbon credit futures. The Subsidiary is a corporation operating under Cayman Islands law that is wholly-owned and controlled by the Fund. The Subsidiary is advised by the Adviser. The Fund’s investment in the Subsidiary may not exceed 25% of the value of its total assets (ignoring any subsequent market appreciation in the Subsidiary’s value), which limitation is imposed by the Internal Revenue Code of 1986, as amended, and is measured at the end of each quarter. The Subsidiary has the same investment objective as the Fund and will follow the same investment policies and restrictions as the Fund. Except as noted, for purposes of this Prospectus, references to the Fund’s investment strategies and risks include those of its Subsidiary, and references to the Fund include the Subsidiary.

What is a “cap and trade” regime?

In a “cap and trade” regime, a limit (“cap”) is typically set by a regulator, such as a government entity or supranational organization, on the total amount of specific greenhouse gases, such as CO₂, that can be emitted by regulated entities, such as manufacturers or energy producers. Capping and reducing the cap on greenhouse gases is viewed as a key policy tool for reaching climate change objectives. The regulator then issues or sells “emission allowances” to regulated entities which may then buy or sell (“trade”) the emission allowances on the open market. To the extent that the regulator may then reduce the cap on emission allowances, regulated entities are thereby incentivized to reduce their emissions; otherwise they must purchase emission allowances on the open market, where the price of such allowances will likely be increasing as a result of demand, and regulated entities that reduce their emissions will be able to sell unneeded emission allowances for profit. The opposite could also occur and the regulator may increase the cap on emission allowances, which would likely increase emissions and decrease the price of allowances. Commodity futures contracts linked to the value of emission allowances are known as carbon credit futures.

Fund Summary

KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)

While the Fund will generally seek to obtain exposure to the same carbon credit futures that are in the Index, the Fund and Subsidiary may not replicate the Index. For example, the Fund may invest in carbon credit futures with different maturity dates (i.e., not one of the next two Decembers), the Fund may weight the carbon credit futures differently than the Index, or the Fund may purchase carbon credit futures on different dates than the rebalancing date for the Index.

The Fund may also invest in other instruments that are consistent with its investment objective. For example, the Fund may invest in emission allowances issued under a cap and trade regime, futures contracts that are not carbon credit futures, options on futures contracts, swap contracts, and other investment companies and notes, which may or may not be exchange-traded.

The debt instruments in which the Fund intends to invest include government securities and corporate or other non-government fixed-income securities with maturities of up to 12 months. The Fund may invest in debt instruments indirectly through short-term bond funds and exchange-traded funds ("ETFs"). The Fund may also invest in cash and cash equivalents, including money market funds.

The Commodities Futures Trading Commission (the "CFTC") has adopted certain requirements that subject registered investment companies and their advisers to regulation by the CFTC if a registered investment company invests more than a prescribed level of its net assets in CFTC-regulated futures, options and swaps, or if a registered investment company markets itself as providing investment exposure to such instruments. Due to the Fund's potential use of CFTC-regulated futures and swaps above CFTC Rule 4.5 limits, it will be considered a "commodity pool" under the Commodity Exchange Act upon commencement of operations.

Under normal circumstances, the Fund will invest at least 80% of its net assets (plus borrowings, if any) in instruments that provide exposure to California Carbon Allowances. The notional value of any investments by the Fund (including its Subsidiary) that provide such exposure, including investments in derivatives (such as futures contracts on California Carbon Allowances), will be counted toward satisfaction of this 80% policy.

The Fund is non-diversified. To the extent the Index is concentrated in a particular industry, the Fund is expected to be concentrated in that industry (using the notional value of any futures in which it invests).

Principal Risks

As with all exchange traded funds ("ETFs"), a shareholder of the Fund is subject to the risk that his or her investment could lose money. The Fund may not achieve its investment objective and an investment in the Fund is not by itself a complete or balanced investment program. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves the risk of total loss. In addition to these risks, the Fund is subject to a number of additional principal risks that may affect the value of its shares, including:

Carbon Emission Allowance and Cap and Trade Risk. There is no assurance that cap and trade regimes will continue to exist. Cap and trade was designed to attempt to put a cap on pollution by putting a price on carbon emissions, but the approach may not prove to be an effective method of reduction in GHG emissions and or in achieving climate change objectives. As a result or due to other factors, cap and trade regimes may be terminated or may not be renewed upon their expiration. New technologies may arise that may diminish or eliminate the need for cap and trade markets. Ultimately, the cost of emissions credits is determined by the cost of actually reducing emissions levels. If the price of credits

Fund Summary

KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)

becomes too high, it will be more economical for companies to develop or invest in green technologies, thereby suppressing the demand for credits and adversely affecting the price of the Fund.

Cap and trade regimes set emission limits (i.e., the right to emit a certain quantity of GHG emissions), which can be allocated or auctioned to the parties regulated under the regime up to the total emissions cap. This allocation may be larger or smaller than is needed for a stable price of credits and can lead to large price volatility, which could affect the value of the Fund. Depending upon the industries covered under the cap and trade regime, unpredictable demand for their products and services can affect the value of GHG emissions credits. For example, very mild winters or very cool summers can decrease demand for electric utilities and therefore require fewer carbon credits to offset reduced production and GHG emissions.

Regulatory Risk. The Fund is subject to the risk that a change in U.S. law and related regulations will impact the way the Fund operates, increase the particular costs of the Fund's operations and/or change the competitive landscape. Additional legislative or regulatory changes could occur that may materially and adversely affect the Fund.

Climate Change Regulatory Risk. Regulatory risk related to changes in regulation and enforcement of cap and trade regimes could adversely affect market behavior. If fines or other penalties for non-compliance are not enforced, incentives to purchase GHG credits will deteriorate, which could result in a decline in the price of emissions credits and a drop in the value of the Fund. In addition, as cap and trade markets develop, new regulation with respect to these markets may arise, which could have a negative effect on the value and liquidity of the cap and trade markets and the Fund.

Subsidiary Investment Risk. By investing in the Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary's investments. Since the Subsidiary is organized under the law of the Cayman Islands and is not registered with the SEC under the Investment Company Act of 1940, as amended (the "1940 Act"), the Fund will not receive all of the protections offered to shareholders of registered investment companies. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to operate as intended, which may negatively affect the Fund and its shareholders.

Derivatives Risk. The use of derivatives (including swaps, futures, forwards, structured notes and options) may involve leverage, which includes risks that are different from, and greater than, the risks associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value and valuation may be more difficult in times of market turmoil. There may be imperfect correlation between the derivative and that of the reference asset, resulting in unexpected returns that could materially adversely affect the Fund. Certain derivatives (such as swaps and options) are bi-lateral agreements that expose the Fund to counterparty risk, which is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of derivative. In that case, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations. That risk is generally thought to be greater with over-the-counter (OTC) derivatives than with derivatives that are exchange traded or centrally cleared. Counterparty risks are compounded by the fact that there are only a limited number of ways available to invest in certain reference assets and, therefore, there may be few counterparties to swaps or

Fund Summary

KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)

options based on those reference assets. Many derivatives are subject to segregation requirements that require the Fund to segregate the market or notional value of the derivatives, which could impede the portfolio management of the Fund.

Futures Strategy Risk. The use of futures contracts is subject to special risk considerations. The primary risks associated with the use of futures contracts include: (a) an imperfect correlation between the change in market value of the reference asset and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the inability to predict correctly the direction of market prices, interest rates, currency exchange rates and other economic factors; and (e) if the Fund has insufficient cash, it may have to sell securities or financial instruments from its portfolio to meet daily variation margin requirements, which may lead to the Fund selling securities or financial instruments at a loss.

As a futures contract the Fund owns approaches its settlement date, the Fund may sell that futures contract and reinvest the proceeds in a similar contract with a more distant settlement date. This process is referred to as “rolling” a futures contract. The successful use of such a strategy depends upon the Adviser’s skill and experience. Although the Fund will attempt to roll from an expiring futures contract to another contract that the Adviser believes will generate the greatest yield for the Fund, the Fund nevertheless may incur a cost to “roll” the contract. In a commodity futures market where current month expiring contracts trade at a lower price than next month’s contract, a situation referred to as “contango,” then, absent the impact of the overall movement in commodity prices, the Fund may experience an adverse impact because it would be selling less expensive contracts and buying more expensive contracts. In the event of a prolonged period of contango, and absent the impact of rising or falling commodity prices, there could be a significant negative impact on the Fund when it “rolls” its futures contract positions.

Commodity-Linked Derivatives Risk. The value of a commodity-linked derivative investment typically is based upon the price movements of a physical commodity and may be affected by changes in overall market movements, volatility of the Index, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, embargoes, tariffs and international economic, political and regulatory developments. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. Commodity-linked derivatives also may be subject to credit and interest rate risks that in general affect the values of debt securities.

Commodity Pool Registration Risk. Under amended regulations promulgated by the CFTC, the Fund and the Subsidiary will be considered commodity pools upon commencement of operations, and therefore each will be subject to regulation under the Commodity Exchange Act and CFTC rules. Krane will register as a commodity pool operator and will manage the Fund and the Subsidiary in accordance with CFTC rules, as well as the rules that apply to registered investment companies. Commodity pools are subject to additional laws, regulations and enforcement policies, all of which may potentially increase compliance costs and may affect the operations and financial performance of the Fund and the Subsidiary. Additionally, positions in futures and other contracts may have to be liquidated at disadvantageous times or prices to prevent the Fund from exceeding any applicable position limits established by the CFTC. Such actions may subject the Fund to substantial losses.

Fund Summary

KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)

Geographic Focus Risk. The Fund's investments will be focused in a particular country, countries, or region and therefore the Fund may be susceptible to adverse market, political, regulatory, and geographic events affecting that country, countries or region. Such geographic focus also may subject the Fund to a higher degree of volatility than a more geographically diversified fund.

California Risk. Because the Fund will gain exposure to carbon credit futures issued under the California Carbon Allowance "cap and trade" program, the Fund's performance also may be negatively impacted by factors affecting California. For example, natural disasters may disrupt the local, state or regional economy or certain sectors of the economy and may impact the prices of such carbon credit futures. California's budget and fiscal operations face certain structural impediments and rely on revenue sources which have been historically sensitive to the economic environment. California's diverse economy is the largest in the United States and one of the largest in the world with major components including high technology, trade, entertainment, manufacturing, tourism, construction, agriculture and services. Any downturn in these sectors or related industries may adversely affect the economy of the state and the prices of such carbon credit futures.

Quebec Risk. Because the Fund will gain exposure to carbon credit futures issued under the California Carbon Allowance "cap and trade" program, the Fund's performance also may be negatively impacted by factors affecting Quebec. Quebec is a province in Canada, which has a separatist party whose objective is to achieve sovereignty and increased self-governing legal and financial powers. In addition, the Canadian market, including Quebec, is relatively concentrated in issuers involved in the production and distribution of natural resources such as forest products, metals, agricultural products, and energy related products like oil, gas, and hydroelectricity. Accordingly, any downturn in these sectors or related industries may adversely affect the economy of Canada and Quebec and the prices of such carbon credit futures.

Fixed Income Securities Risk. Fixed income securities are subject to credit risk and interest rate risk. Credit risk refers to the possibility that the issuer of a security will not make timely interest payments or repay the principal of the debt issued (i.e., default on its obligations). A downgrade or default on securities held by the Fund could adversely affect the Fund's performance. Generally, the longer the maturity and the lower the credit quality of a security, the more sensitive it is to credit risk. Interest rate risk refers to fluctuations in the value of a debt resulting from changes in the level of interest rates. When interest rates go up, the prices of most debt instruments generally go down; and when interest rates go down, the prices of most debt instruments generally go up. Debt instruments with longer durations tend to be more sensitive to interest rate changes, typically making them more volatile. Interest rates have recently increased and may continue increasing, thereby heightening the risks associated with rising interest rates.

Concentration Risk. The Fund's assets are expected to be concentrated in carbon credit futures and its investments could react similarly to market developments. Thus, the Fund is subject to loss due to adverse occurrences that may affect that industry or group of industries or sector. The prices and performance of carbon credit futures may be particularly affected by developments in the following sector:

Energy Sector Risk. Investments in, and/or exposure to, the energy sector, which includes energy commodities such as oil, gasoline, and carbon credits, may be highly volatile and can change quickly and unpredictably due to a number of factors, including the legislative or regulatory changes, adverse

Fund Summary

KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)

market conditions, increased competition affecting the energy sector, financial, accounting and tax matters and other events that the Fund cannot control. In addition, the value of energy commodities may fluctuate widely due to changes in supply and demand.

The energy sector is typically cyclical and highly dependent upon commodities and energy prices. Issuers in this sector are usually subject to substantial government regulation and contractual fixed pricing, which may increase the cost of business and limit these issuers' earnings, and a significant portion of their revenues depends on a relatively small number of customers, including governmental entities and utilities.

Non-Diversified Fund Risk. The Fund is non-diversified and may concentrate its investments to a greater extent than a diversified fund. Changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

ETF Risk. As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for exchange-traded funds ("ETFs"), such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

Cash Transactions Risk. Like other ETFs, the Fund sells and redeems its shares only in large blocks called Creation Units and only to "Authorized Participants." Unlike many other ETFs, however, the Fund expects to effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities. Thus, an investment in the Fund may be less tax-efficient than an investment in other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. As a result, the Fund may pay out higher capital gains distributions than ETFs that redeem in-kind. Further, paying redemption proceeds in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to obtain the cash needed to distribute redemption proceeds at an inopportune time.

Premium/Discount Risk. There may be times when the market price of the Fund's shares is more than the NAV intra-day (at a premium) or less than the NAV intra-day (at a discount). As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop loss orders to sell Fund shares may be executed at prices well below NAV.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of shares. Secondary market trading is subject to bid-ask spreads and trading in Fund shares may be halted by the Exchange because of market conditions or other reasons. If a trading halt occurs, a shareholder may temporarily

Fund Summary

KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)

be unable to purchase or sell shares of the Fund. In addition, although the Fund's shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained or that the Fund's shares will continue to be listed.

Liquidity Risk. The Fund's investments are subject to liquidity risk, which exists when an investment is or becomes difficult or impossible to purchase or sell at an advantageous time and price. If a transaction is particularly large or if the relevant market is or becomes illiquid, it may not be possible to initiate a transaction or liquidate a position, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. Liquidity risk may be the result of, among other things, market turmoil, the reduced number and capacity of traditional market participants, or the lack of an active trading market. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, new legislation or regulatory changes inside or outside the U.S. Liquid investments may become less liquid after being purchased by the Fund, particularly during periods of market stress. In addition, if a number of securities held by the Fund stop trading, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt.

Passive Investment Risk. There is no guarantee that the Index will create the desired exposure and the Fund is not actively managed. It does not seek to "beat" the Index or take temporary defensive positions when markets decline. Therefore, the Fund may purchase or hold securities with current or projected underperformance.

Market Risk. The values of the Fund's holdings could decline generally or could underperform other investments. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, and/or other government actors could cause volatility in global financial markets and negative sentiment, which could have a negative impact on the Fund and could result in losses. Geopolitical and other risks, including environmental and public health risks may add to instability in world economies and markets generally. Changes in value may be temporary or may last for extended periods. Further, the Fund is susceptible to the risk that certain investments may be difficult or impossible to sell at a favorable time or price. Market developments may also cause the Fund's investments to become less liquid and subject to erratic price movements.

High Portfolio Turnover Risk. The Fund may incur high turnover rates, which may increase the Fund's brokerage commission costs and negatively impact the Fund's performance. Such portfolio turnover also may generate net short-term capital gains.

Tracking Error Risk. The Fund's return may not match or achieve a high degree of correlation with the return of the Index. This may be due to, among other factors, the Fund investments in carbon credit futures with different maturity dates, the Fund weighing the carbon credit futures differently than the Index, and the Fund's purchase of carbon credit futures on different dates than the rebalancing date for the Index. To the extent that the Fund invests in other instruments that are consistent with its investment objective, such as futures contracts that are not carbon credit futures, options on futures contracts, swap contracts, and other investment companies and notes, the Fund's ability to track the Index may be adversely affected.

Valuation Risk. Independent market quotations for certain investments held by the Fund may not be readily available, and such investments may be fair valued or valued by a pricing service at an evaluated price. These valuations involve subjectivity and different market participants may assign different prices to the same investment. As a result, there is a risk that the Fund may not be able to

Fund Summary

KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)

sell an investment at the price assigned to the investment by the Fund. In addition, the securities in which the Fund invests may trade on days that the Fund does not price its shares; as a result, the value of Fund shares may change on days when investors cannot purchase or sell their Fund holdings.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain income, asset diversification and distribution requirements each year. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income, which would adversely affect the Fund's performance.

The Fund intends to treat its income from the Subsidiary as qualifying income. The tax treatment of the Fund's investment in the Subsidiary may be adversely affected by future legislation, court decisions, Treasury Regulations and/or guidance issued by the IRS that could affect whether income derived from such investments is "qualifying income" under Subchapter M of the Internal Revenue Code, or otherwise affect the character, timing and/or amount of the Fund's taxable income or any gains or distributions made by the Fund.

U.S. Government Obligations Risk. Obligations of U.S. Government agencies and authorities receive varying levels of support and may not be backed by the full faith and credit of the U.S. Government, which could affect the Fund's ability to recover should they default. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. Additionally, market prices and yields of securities supported by the full faith and credit of the U.S. government may decline or be negative for short or long periods of time.

Investments in Investment Companies Risk. The Fund may invest in other investment companies, including those advised, sponsored or otherwise serviced by Krane. The Fund will indirectly be exposed to the risks of investments by such funds and will incur its pro rata share of the underlying fund's expenses. Krane is subject to conflicts of interest in allocating Fund assets to investment companies that are advised, sponsored or otherwise serviced by Krane and/or its affiliates. To the extent that the Fund invests in investment companies or other pooled investment vehicles that are not registered pursuant to the 1940 Act, including foreign investment companies, it will not enjoy the protections of the U.S. law.

Cash and Cash Equivalents Risk.

The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. Holding cash or cash equivalents, even strategically, may lead to missed investment opportunities. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Performance Information

Once the Fund has completed a full calendar year of operations, a bar chart and table will be included in this Prospectus that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the variability of the Fund's return to a broad measure of market performance. Once available, the Fund's current performance information will be available at www.kraneshares.com. Past performance does not necessarily indicate how the Fund will perform in the future.

Fund Summary

KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)

Management

Investment Adviser and Sub-Adviser

Krane Funds Advisors, LLC (“Krane” or “Adviser”) serves as the investment adviser to the Fund. Climate Finance Partners LLC (“Sub-Adviser”) serves as the non-discretionary investment sub-adviser to the Fund.

Portfolio Managers

James Maund, Head of Capital Markets at the Adviser, has served as the lead portfolio manager of the Fund since the Fund’s inception. Jonathan Shelon, Chief Operating Officer of the Adviser, supports Mr. Maund and Krane’s investment team for the Fund and has been a portfolio manager of the Fund since the Fund’s inception. Luke Oliver, Managing Director and Head of Strategy at the Adviser, has served as a portfolio manager of the Fund since August 1, 2022.

Purchase and Sale of Fund Shares

Shares may be purchased and redeemed from the Fund only in “Creation Units” of 25,000 shares, or multiples thereof. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on the Exchange. Individual shares can be bought and sold throughout the trading day like other publicly traded securities through a broker-dealer on the Exchange. These transactions do not involve the Fund. The price of an individual Fund share is based on market prices, which may be different from its NAV. As a result, the Fund’s shares may trade at a price greater than the NAV (at a premium) or less than the NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”). Most investors will incur customary brokerage commissions and charges when buying or selling shares of the Fund through a broker-dealer.

Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid ask spreads, are available on the Fund’s website at www.kraneshares.com.

Tax Information

Fund distributions are generally taxable as ordinary income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account, which may be taxable upon withdrawal.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary’s website for more information.

Fund Summary

KraneShares Eastern US Carbon Strategy ETF

Investment Objective

The KraneShares Eastern US Carbon Strategy ETF (the “Fund”) seeks to provide a total return that, before fees and expenses, tracks the performance of the IHS Markit RGGI Index (the “Index”), which is an index comprised of futures contracts on emission allowances issued by a “cap and trade” regulatory regime that seeks to reduce greenhouse gas emissions over time in an effort to curb climate change.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.78%
Distribution and/or Service (12b-1) Fees*	0.00%
Other Expenses**	0.01%
Total Annual Fund Operating Expenses	0.79%

* Pursuant to a Distribution Plan, the Fund may bear a Rule 12b-1 fee not to exceed 0.25% per year of the Fund's average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees has not currently approved the commencement of any payments under the Distribution Plan.

** Based on estimated amounts for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

<u>1 Year</u>	<u>3 Years</u>
\$81	\$252

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund's performance. Because the Fund has not commenced investment operations prior to the date of this prospectus, it does not have portfolio turnover information for the prior fiscal year to report.

Fund Summary

KraneShares Eastern US Carbon Strategy ETF

Principal Investment Strategies

In seeking to achieve its investment objective, the Fund attempts to maintain exposure to carbon credit futures that are substantially the same as those included in the Index, which is an index comprised of futures contracts on emission allowances issued by a “cap and trade” regulatory regime that seeks to reduce greenhouse gas emissions over time. The Index is designed to measure the performance of a portfolio of futures contracts on carbon credits issued under the Regional Greenhouse Gas Initiative (“RGGI”) “cap and trade” regime (“carbon credit futures”). An emission allowance or carbon credit is a unit of emissions (typically one ton of CO₂) that the owner of the allowance or credit is permitted to emit. A cap and trade regime seeks to gradually reduce such emission allowances or carbon credits over time to incentivize companies to reduce greenhouse gas emissions in an effort to curb climate change. The Index includes only carbon credit futures that mature in December of the next one to two years. The Fund may also invest directly and indirectly in certain debt instruments.

The RGGI is a cooperative market-based effort among the states of Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, Vermont, and Virginia to cap and reduce CO₂ emissions from the power sector. It represents the first cap-and-trade regional initiative implemented in the United States.

The Fund will utilize a subsidiary (the “Subsidiary”) for purposes of investing in carbon credit futures. The Subsidiary is a corporation operating under Cayman Islands law that is wholly-owned and controlled by the Fund. The Subsidiary is advised by the Adviser. The Fund’s investment in the Subsidiary may not exceed 25% of the value of its total assets (ignoring any subsequent market appreciation in the Subsidiary’s value), which limitation is imposed by the Internal Revenue Code of 1986, as amended, and is measured at the end of each quarter. The Subsidiary has the same investment objective as the Fund and will follow the same investment policies and restrictions as the Fund. Except as noted, for purposes of this Prospectus, references to the Fund’s investment strategies and risks include those of its Subsidiary, and references to the Fund include the Subsidiary.

What is a “cap and trade” regime?

In a “cap and trade” regime, a limit (“cap”) is typically set by a regulator, such as a government entity or supranational organization, on the total amount of specific greenhouse gases, such as CO₂, that can be emitted by regulated entities, such as manufacturers or energy producers. Capping and reducing the cap on greenhouse gases is viewed as a key policy tool for reaching climate change objectives. The regulator then issues or sells “emission allowances” to regulated entities which may then buy or sell (“trade”) the emission allowances on the open market. To the extent that the regulator may then reduce the cap on emission allowances, regulated entities are thereby incentivized to reduce their emissions; otherwise they must purchase emission allowances on the open market, where the price of such allowances will likely be increasing as a result of demand, and regulated entities that reduce their emissions will be able to sell unneeded emission allowances for profit. The opposite could also occur and the regulator may increase the cap on emission allowances, which would likely increase emissions and decrease the price of allowances. Commodity futures contracts linked to the value of emission allowances are known as carbon credit futures.

Fund Summary

KraneShares Eastern US Carbon Strategy ETF

While the Fund will generally seek to obtain exposure to the same carbon credit futures that are in the Index, the Fund and Subsidiary may not replicate the Index. For example, the Fund may invest in carbon credit futures with different maturity dates (i.e., not one of the next two Decembers), the Fund may weight the carbon credit futures differently than the Index, or the Fund may purchase carbon credit futures on different dates than the rebalancing date for the Index.

The Fund may also invest in other instruments that are consistent with its investment objective. For example, the Fund may invest in emission allowances issued under a cap and trade regime, futures contracts that are not carbon credit futures, options on futures contracts, swap contracts, and other investment companies and notes, which may or may not be exchange-traded.

The debt instruments in which the Fund intends to invest include government securities and corporate or other non-government fixed-income securities with maturities of up to 12 months. The Fund may invest in debt instruments indirectly through short-term bond funds and exchange-traded funds ("ETFs"). The Fund may also invest in cash and cash equivalents, including money market funds.

The Commodities Futures Trading Commission (the "CFTC") has adopted certain requirements that subject registered investment companies and their advisers to regulation by the CFTC if a registered investment company invests more than a prescribed level of its net assets in CFTC-regulated futures, options and swaps, or if a registered investment company markets itself as providing investment exposure to such instruments. Due to the Fund's potential use of CFTC-regulated futures and swaps above CFTC Rule 4.5 limits, it will be considered a "commodity pool" under the Commodity Exchange Act upon commencement of operations.

Under normal circumstances, the Fund will invest at least 80% of its net assets (plus borrowings, if any) in instruments that provide exposure to the Eastern U.S. The notional value of any investments by the Fund (including its Subsidiary) that provide such exposure, including investments in derivatives (such as futures contracts on carbon credits issued under the Regional Greenhouse Gas Initiative), will be counted toward satisfaction of this 80% policy.

The Fund is non-diversified. To the extent the Index is concentrated in a particular industry, the Fund is expected to be concentrated in that industry (using the notional value of any futures in which it invests).

Principal Risks

As with all exchange traded funds ("ETFs"), a shareholder of the Fund is subject to the risk that his or her investment could lose money. The Fund may not achieve its investment objective and an investment in the Fund is not by itself a complete or balanced investment program. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves the risk of total loss. In addition to these risks, the Fund is subject to a number of additional principal risks that may affect the value of its shares, including:

Carbon Emission Allowance and Cap and Trade Risk. There is no assurance that cap and trade regimes will continue to exist. Cap and trade was designed to attempt to put a cap on pollution by putting a price on carbon emissions, but the approach may not prove to be an effective method of reduction in GHG emissions and or in achieving climate change objectives. As a result or due to other factors, cap and trade regimes may be terminated or may not be renewed upon their expiration. New technologies may arise that may diminish or eliminate the need for cap and trade markets. Ultimately, the cost of

Fund Summary

KraneShares Eastern US Carbon Strategy ETF

emissions credits is determined by the cost of actually reducing emissions levels. If the price of credits becomes too high, it will be more economical for companies to develop or invest in green technologies, thereby suppressing the demand for credits and adversely affecting the price of the Fund.

Cap and trade regimes set emission limits (i.e., the right to emit a certain quantity of GHG emissions), which can be allocated or auctioned to the parties regulated under the regime up to the total emissions cap. This allocation may be larger or smaller than is needed for a stable price of credits and can lead to large price volatility, which could affect the value of the Fund. Depending upon the industries covered under the cap and trade regime, unpredictable demand for their products and services can affect the value of GHG emissions credits. For example, very mild winters or very cool summers can decrease demand for electric utilities and therefore require fewer carbon credits to offset reduced production and GHG emissions.

Regulatory Risk. The Fund is subject to the risk that a change in U.S. law and related regulations will impact the way the Fund operates, increase the particular costs of the Fund's operations and/or change the competitive landscape. Additional legislative or regulatory changes could occur that may materially and adversely affect the Fund.

Climate Change Regulatory Risk. Regulatory risk related to changes in regulation and enforcement of cap and trade regimes could adversely affect market behavior. If fines or other penalties for non-compliance are not enforced, incentives to purchase GHG credits will deteriorate, which could result in a decline in the price of emissions credits and a drop in the value of the Fund. In addition, as cap and trade markets develop, new regulation with respect to these markets may arise, which could have a negative effect on the value and liquidity of the cap and trade markets and the Fund.

Subsidiary Investment Risk. By investing in the Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary's investments. Since the Subsidiary is organized under the law of the Cayman Islands and is not registered with the SEC under the Investment Company Act of 1940, as amended (the "1940 Act"), the Fund will not receive all of the protections offered to shareholders of registered investment companies. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to operate as intended, which may negatively affect the Fund and its shareholders.

Derivatives Risk. The use of derivatives (including swaps, futures, forwards, structured notes and options) may involve leverage, which includes risks that are different from, and greater than, the risks associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value and valuation may be more difficult in times of market turmoil. There may be imperfect correlation between the derivative and that of the reference asset, resulting in unexpected returns that could materially adversely affect the Fund. Certain derivatives (such as swaps and options) are bi-lateral agreements that expose the Fund to counterparty risk, which is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of derivative. In that case, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations. That risk is generally thought to be greater with over-the-counter (OTC) derivatives than with derivatives that are exchange traded or centrally cleared. Counterparty risks are compounded by the fact that there are only a limited number of ways available

Fund Summary

KraneShares Eastern US Carbon Strategy ETF

to invest in certain reference assets and, therefore, there may be few counterparties to swaps or options based on those reference assets. Many derivatives are subject to segregation requirements that require the Fund to segregate the market or notional value of the derivatives, which could impede the portfolio management of the Fund.

Futures Strategy Risk. The use of futures contracts is subject to special risk considerations. The primary risks associated with the use of futures contracts include: (a) an imperfect correlation between the change in market value of the reference asset and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the inability to predict correctly the direction of market prices, interest rates, currency exchange rates and other economic factors; and (e) if the Fund has insufficient cash, it may have to sell securities or financial instruments from its portfolio to meet daily variation margin requirements, which may lead to the Fund selling securities or financial instruments at a loss.

As a futures contract the Fund owns approaches its settlement date, the Fund may sell that futures contract and reinvest the proceeds in a similar contract with a more distant settlement date. This process is referred to as “rolling” a futures contract. The successful use of such a strategy depends upon the Adviser’s skill and experience. Although the Fund will attempt to roll from an expiring futures contract to another contract that the Adviser believes will generate the greatest yield for the Fund, the Fund nevertheless may incur a cost to “roll” the contract. In a commodity futures market where current month expiring contracts trade at a lower price than next month’s contract, a situation referred to as “contango,” then, absent the impact of the overall movement in commodity prices, the Fund may experience an adverse impact because it would be selling less expensive contracts and buying more expensive contracts. In the event of a prolonged period of contango, and absent the impact of rising or falling commodity prices, there could be a significant negative impact on the Fund when it “rolls” its futures contract positions.

Commodity-Linked Derivatives Risk. The value of a commodity-linked derivative investment typically is based upon the price movements of a physical commodity and may be affected by changes in overall market movements, volatility of the Index, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, embargoes, tariffs and international economic, political and regulatory developments. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. Commodity-linked derivatives also may be subject to credit and interest rate risks that in general affect the values of debt securities.

Commodity Pool Registration Risk. Under amended regulations promulgated by the CFTC, the Fund and the Subsidiary will be considered commodity pools upon commencement of operations, and therefore each will be subject to regulation under the Commodity Exchange Act and CFTC rules. Krane will register as a commodity pool operator and will manage the Fund and the Subsidiary in accordance with CFTC rules, as well as the rules that apply to registered investment companies. Commodity pools are subject to additional laws, regulations and enforcement policies, all of which may potentially increase compliance costs and may affect the operations and financial performance of the Fund and the Subsidiary. Additionally, positions in futures and other contracts may have to be liquidated at disadvantageous times or prices to prevent the Fund from exceeding any applicable position limits established by the CFTC. Such actions may subject the Fund to substantial losses.

Geographic Focus Risk. The Fund’s investments will be focused in a particular country, countries, or region and therefore the Fund may be susceptible to adverse market, political, regulatory, and

Fund Summary

KraneShares Eastern US Carbon Strategy ETF

geographic events affecting that country, countries or region. Such geographic focus also may subject the Fund to a higher degree of volatility than a more geographically diversified fund.

Eastern U.S. Risk. Because the Fund will gain exposure to carbon credit futures issued under the Regional Greenhouse Gas Initiative (“RGGI”) “cap and trade” program, the Fund’s performance also may be negatively impacted by factors affecting the Eastern region of the United States. For example, flooding, warming temperatures, and precipitation variability are growing challenges in the Eastern region of the United States and may disrupt the local, state, or regional economies of the Eastern states or certain sectors of those economies and may impact the prices of such carbon credit futures. The economies of Eastern region of the United States are comprised of components including agriculture, tourism, and manufacturing. Any downturn in these sectors or related industries may adversely affect the economy of the Eastern region of the United States and the prices of such carbon credit futures.

Fixed Income Securities Risk. Fixed income securities are subject to credit risk and interest rate risk. Credit risk refers to the possibility that the issuer of a security will not make timely interest payments or repay the principal of the debt issued (i.e., default on its obligations). A downgrade or default on securities held by the Fund could adversely affect the Fund’s performance. Generally, the longer the maturity and the lower the credit quality of a security, the more sensitive it is to credit risk. Interest rate risk refers to fluctuations in the value of a debt resulting from changes in the level of interest rates. When interest rates go up, the prices of most debt instruments generally go down; and when interest rates go down, the prices of most debt instruments generally go up. Debt instruments with longer durations tend to be more sensitive to interest rate changes, typically making them more volatile. Interest rates have recently increased and may continue increasing, thereby heightening the risks associated with rising interest rates.

Concentration Risk. The Fund’s assets are expected to be concentrated in carbon credit futures and its investments could react similarly to market developments. Thus, the Fund is subject to loss due to adverse occurrences that may affect that industry or group of industries or sector. The prices and performance of carbon credit futures may be particularly affected by developments in the following sector:

Energy Sector Risk. Investments in, and/or exposure to, the energy sector, which includes energy commodities such as oil, gasoline, and carbon credits, may be highly volatile and can change quickly and unpredictably due to a number of factors, including the legislative or regulatory changes, adverse market conditions, increased competition affecting the energy sector, financial, accounting and tax matters and other events that the Fund cannot control. In addition, the value of energy commodities may fluctuate widely due to changes in supply and demand.

The energy sector is typically cyclical and highly dependent upon commodities and energy prices. Issuers in this sector are usually subject to substantial government regulation and contractual fixed pricing, which may increase the cost of business and limit these issuers’ earnings, and a significant portion of their revenues depends on a relatively small number of customers, including governmental entities and utilities.

Non-Diversified Fund Risk. The Fund is non-diversified and may concentrate its investments to a greater extent than a diversified fund. Changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund’s share price than would occur in a diversified fund. This may increase the Fund’s volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund’s performance.

Fund Summary

KraneShares Eastern US Carbon Strategy ETF

ETF Risk. As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for exchange-traded funds (“ETFs”), such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

Cash Transactions Risk. Like other ETFs, the Fund sells and redeems its shares only in large blocks called Creation Units and only to “Authorized Participants.” Unlike many other ETFs, however, the Fund expects to effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities. Thus, an investment in the Fund may be less tax-efficient than an investment in other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. As a result, the Fund may pay out higher capital gains distributions than ETFs that redeem in-kind. Further, paying redemption proceeds in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to obtain the cash needed to distribute redemption proceeds at an inopportune time.

Premium/Discount Risk. There may be times when the market price of the Fund’s shares is more than the NAV intra-day (at a premium) or less than the NAV intra-day (at a discount). As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop loss orders to sell Fund shares may be executed at prices well below NAV.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of shares. Secondary market trading is subject to bid-ask spreads and trading in Fund shares may be halted by the Exchange because of market conditions or other reasons. If a trading halt occurs, a shareholder may temporarily be unable to purchase or sell shares of the Fund. In addition, although the Fund’s shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained or that the Fund’s shares will continue to be listed.

New Fund Risk. The Fund is new and does not yet have shares outstanding. If the Fund does not grow large in size once it commences trading, it will be at greater risk than larger funds of wider bid-ask spreads for its shares, trading at a greater premium or discount to NAV, liquidation and/or a stop to trading.

Liquidity Risk. The Fund’s investments are subject to liquidity risk, which exists when an investment is or becomes difficult or impossible to purchase or sell at an advantageous time and price. If a transaction is particularly large or if the relevant market is or becomes illiquid, it may not be possible to initiate a transaction or liquidate a position, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. Liquidity risk may be the result of, among other things, market turmoil, the reduced number and capacity of traditional market participants, or the lack of an active trading market. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, new legislation

Fund Summary

KraneShares Eastern US Carbon Strategy ETF

or regulatory changes inside or outside the U.S. Liquid investments may become less liquid after being purchased by the Fund, particularly during periods of market stress. In addition, if a number of securities held by the Fund stop trading, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt.

Passive Investment Risk. There is no guarantee that the Index will create the desired exposure and the Fund is not actively managed. It does not seek to “beat” the Index or take temporary defensive positions when markets decline. Therefore, the Fund may purchase or hold securities with current or projected underperformance.

Market Risk. The values of the Fund’s holdings could decline generally or could underperform other investments. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, and/or other government actors could cause volatility in global financial markets and negative sentiment, which could have a negative impact on the Fund and could result in losses. Geopolitical and other risks, including environmental and public health risks may add to instability in world economies and markets generally. Changes in value may be temporary or may last for extended periods. Further, the Fund is susceptible to the risk that certain investments may be difficult or impossible to sell at a favorable time or price. Market developments may also cause the Fund’s investments to become less liquid and subject to erratic price movements.

High Portfolio Turnover Risk. The Fund may incur high turnover rates, which may increase the Fund’s brokerage commission costs and negatively impact the Fund’s performance. Such portfolio turnover also may generate net short-term capital gains.

Tracking Error Risk. The Fund’s return may not match or achieve a high degree of correlation with the return of the Index. This may be due to, among other factors, the Fund investments in carbon credit futures with different maturity dates, the Fund weighing the carbon credit futures differently than the Index, and the Fund’s purchase of carbon credit futures on different dates than the rebalancing date for the Index. To the extent that the Fund invests in other instruments that are consistent with its investment objective, such as futures contracts that are not carbon credit futures, options on futures contracts, swap contracts, and other investment companies and notes, the Fund’s ability to track the Index may be adversely affected.

Valuation Risk. Independent market quotations for certain investments held by the Fund may not be readily available, and such investments may be fair valued or valued by a pricing service at an evaluated price. These valuations involve subjectivity and different market participants may assign different prices to the same investment. As a result, there is a risk that the Fund may not be able to sell an investment at the price assigned to the investment by the Fund. In addition, the securities in which the Fund invests may trade on days that the Fund does not price its shares; as a result, the value of Fund shares may change on days when investors cannot purchase or sell their Fund holdings.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain income, asset diversification and distribution requirements each year. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income, which would adversely affect the Fund’s performance.

Fund Summary

KraneShares Eastern US Carbon Strategy ETF

The Fund intends to treat its income from the Subsidiary as qualifying income. The tax treatment of the Fund's investment in the Subsidiary may be adversely affected by future legislation, court decisions, Treasury Regulations and/or guidance issued by the IRS that could affect whether income derived from such investments is "qualifying income" under Subchapter M of the Internal Revenue Code, or otherwise affect the character, timing and/or amount of the Fund's taxable income or any gains or distributions made by the Fund. The Fund's fiscal year is expected to end on March 31 of each year.

U.S. Government Obligations Risk. Obligations of U.S. Government agencies and authorities receive varying levels of support and may not be backed by the full faith and credit of the U.S. Government, which could affect the Fund's ability to recover should they default. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. Additionally, market prices and yields of securities supported by the full faith and credit of the U.S. government may decline or be negative for short or long periods of time.

Investments in Investment Companies Risk. The Fund may invest in other investment companies, including those advised, sponsored or otherwise serviced by Krane. The Fund will indirectly be exposed to the risks of investments by such funds and will incur its pro rata share of the underlying fund's expenses. Krane is subject to conflicts of interest in allocating Fund assets to investment companies that are advised, sponsored or otherwise serviced by Krane and/or its affiliates. To the extent that the Fund invests in investment companies or other pooled investment vehicles that are not registered pursuant to the 1940 Act, including foreign investment companies, it will not enjoy the protections of the U.S. law.

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. Holding cash or cash equivalents, even strategically, may lead to missed investment opportunities. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Performance Information

Once the Fund has completed a full calendar year of operations, a bar chart and table will be included in this Prospectus that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the variability of the Fund's return to a broad measure of market performance. Once available, the Fund's current performance information will be available at www.kraneshares.com. Past performance does not necessarily indicate how the Fund will perform in the future.

Management

Investment Adviser and Sub-Adviser

Krane Funds Advisors, LLC ("Krane" or "Adviser") serves as the investment adviser to the Fund. Climate Finance Partners LLC ("Sub-Adviser") serves as the non-discretionary investment sub-adviser to the Fund.

Fund Summary

KraneShares Eastern US Carbon Strategy ETF

Portfolio Managers

James Maund, Head of Capital Markets at the Adviser, has served as the lead portfolio manager of the Fund since the Fund's inception. Jonathan Shelon, Chief Operating Officer of the Adviser, supports Mr. Maund and Krane's investment team for the Fund and has been a portfolio manager of the Fund since the Fund's inception. Luke Oliver, Managing Director and Head of Strategy at the Adviser, has served as a portfolio manager of the Fund since the Fund's inception.

Purchase and Sale of Fund Shares

Shares may be purchased and redeemed from the Fund only in "Creation Units" of 50,000 shares, or multiples thereof. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on the Exchange. Individual shares can be bought and sold throughout the trading day like other publicly traded securities through a broker-dealer on the Exchange. These transactions do not involve the Fund. The price of an individual Fund share is based on market prices, which may be different from its NAV. As a result, the Fund's shares may trade at a price greater than the NAV (at a premium) or less than the NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). Most investors will incur customary brokerage commissions and charges when buying or selling shares of the Fund through a broker-dealer.

Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid ask spreads, are available on the Fund's website at www.kraneshares.com.

Tax Information

Fund distributions are generally taxable as ordinary income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account, which may be taxable upon withdrawal.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary's website for more information.

Additional Information About the Funds

Each of the policies described in this Prospectus is a non-fundamental policy that may be changed by the Board of Trustees of the Trust without shareholder approval. Certain fundamental policies of the Fund are set forth in the SAI.

Additional Information about Principal Investment Strategies of KraneShares Global Carbon Transformation ETF

KraneShares Global Carbon Transformation ETF

To pursue its goal, the Fund will invest primarily in equity securities and depositary receipts of U.S. and foreign companies, including companies located in emerging markets, that are “Carbon Emissions Reducers”. The Fund defines “Carbon Emissions Reducers” for these purposes to be companies that are taking material steps to reduce (1) the carbon footprint of their products and/or services or (2) the carbon footprint of other companies. This includes companies in the supply chain of such companies and companies that are increasing their business with the companies taking material steps to reduce their carbon footprint. Companies that are moving aggressively to profit from the decarbonization movement, such as by repurposing existing operations or investing in new technologies so as to reduce their carbon footprint in the future and companies that provide products or services, including intellectual property, that are designed to enable other businesses to reduce carbon emissions, are examples of Carbon Emissions Reducers. The Fund is actively-managed by Krane Funds Advisors, LLC (the “Adviser”).

The Adviser believes that investing in Carbon Emissions Reducers may offer the potential for above-average long-term growth, especially if environmental, social and corporate governance (“ESG”) factors become more consequential to investors. Since carbon dioxide emissions from human activities make up the majority of greenhouse gas (“GHG”) emissions, the production, deployment and use of clean and low-emission energy technologies and processes to reduce carbon dioxide emissions is consistent with the broad social objective of reducing GHG emissions.

The Adviser seeks to invest in Carbon Emissions Reducers across industries, sectors and market capitalizations, including the energy, utilities, materials, industrials, and information technology sectors. The Adviser seeks to invest in companies that offer products and services that are expected to result in a future reduction of carbon emissions and benefit from the adoption of low-carbon emissions objectives. The Adviser’s process seeks to estimate the future valuations of companies not only based on current financial metrics, but also inclusive of the Adviser’s assessment of the potential future value of their decarbonization efforts. At the time of investment by the Fund, a company may not be a low carbon emitter, but rather will be actively seeking to reduce its carbon footprint and/or the carbon footprint of its suppliers and customers. For example, a producer of offshore oil drilling machinery would qualify for investment if it were repurposing its capabilities to develop offshore wind energy turbines.

Criteria that the Adviser may consider in selecting companies for the Fund’s portfolio include:

- a company’s position in its industry;
- its stated commitment to decarbonization and the existence of disclosed strategies and/or management incentives tied to successful decarbonization initiatives;
- its assets, products, customer base and exposure to geographic locations that the Adviser expects to benefit from decarbonization trends;

Additional Information About the Funds

- its ability to derive and maintain a competitive advantage from its existing market position, processes, technologies and customer relationships as businesses transition to address decarbonization objectives;
- its capital allocation strategy, particularly with respect to decarbonization;
- its corporate and capital structure activity (including mergers, acquisitions and divestitures) to the extent it appears to the Adviser to be designed to facilitate an accelerated decarbonization transition;
- its prospective growth rate, potential returns and security valuation, from its investments in decarbonization-related areas; and
- its shareholder base, including the perceived motivations of its shareholders.

Using proprietary, fundamental, bottom-up analysis of company-disclosed and third-party data, the Adviser analyzes sectors and industries that the Adviser expects to be impacted by societal, shareholder or governmental pressure to decarbonize, seeking to identify those in which positive business impacts from decarbonization appear most likely. Within each such sector and industry, the Adviser seeks to identify for the Fund companies that are well-positioned to benefit from the transition to a decarbonized world. The Adviser will exit a position if, in the opinion of the Adviser, a more attractive investment opportunity exists and/or if the thesis that drove the investment is no longer present.

Under normal circumstances, the Fund will invest in approximately 30 to 50 companies. The Fund defines emerging markets as those in the MSCI Emerging Markets Index. The Fund may invest in derivative instruments (including swaps, futures, forwards, structured notes and options) for investment purposes, which may include altering the Fund's exposure to currencies, sectors and individual issuers.

The Fund is non-diversified.

The Fund may engage in securities lending.

Temporary Defensive Positions. From time to time, the Fund may take temporary defensive positions that are inconsistent with its principal investment strategies in attempting to respond to adverse market, economic, political, or other conditions. In those instances, the Fund may hold up to 100% of its assets in cash; short-term U.S. government securities and government agency securities; investment grade money market instruments; money market mutual funds; investment grade fixed income securities; repurchase agreements; commercial paper; cash equivalents; and exchange-traded investment vehicles that principally invest in the foregoing instruments. As a result of engaging in these temporary measures, the Fund may not achieve its investment objective.

Indexes for other Funds

KraneShares Global Carbon Strategy ETF

The Index is designed to measure the performance of a portfolio of liquid carbon credit futures that require "physical delivery" of emission allowances issued under cap and trade regimes. The Index includes only carbon credit futures that mature in December of the next one to two years and that have a minimum average monthly trading volume over the previous six months of at least \$10 million. The Index weights eligible carbon credit futures based on their average monthly trading volume during the relevant six-month period, subject to a 5% minimum weight per regime and a 65% maximum

Additional Information About the Funds

weight to any one of the following geographic regions: (1) Europe, the Middle East and Africa, (2) the Americas, and (3) the Asia-Pacific. In addition, no single carbon credit futures contract expiring in a particular year will receive an allocation of less than 5% or more than 60% at the semi-annual rebalancing or annual reconstitution of the Index.

As of June 29, 2022, the Index included carbon credit futures linked to the value of emissions allowances issued under the following cap and trade regimes: the European Union Emissions Trading System; the California Carbon Allowance; Regional Greenhouse Gas Initiative; and the UK Emissions Trading Scheme cap and trade regimes. As the global carbon credit market grows, additional carbon credit futures are expected to enter the Index, and the Fund's portfolio when they have a minimum average monthly trading volume of at least \$10 million over the relevant six-month period.

KraneShares European Carbon Allowance Strategy ETF

The Index is designed to measure the performance of a portfolio of futures contracts on carbon credits issued under the European Union Emissions Trading System "cap and trade" regime ("carbon credit futures"). The Index includes only carbon credit futures that mature in December of the next one to two years.

KraneShares California Carbon Allowance Strategy ETF

The Index is designed to measure the performance of a portfolio of futures contracts on carbon credits issued under the California Carbon Allowance "cap and trade" regime ("carbon credit futures"). The Index includes only carbon credit futures that mature in December of the next one to two years.

Carbon credits issued under the California Carbon Allowance "cap and trade" regime include carbon credits issued by Quebec since the California and Quebec markets were linked pursuant to the Western Climate Initiative in 2014. Currently, carbon credits issued by Quebec each year consist of approximately 17-18% of the carbon credits issued under the California Carbon Allowance "cap and trade" regime. This percentage is subject to change and it is possible for additional markets to be added in the future.

KraneShares Eastern US Carbon Strategy ETF

The Index is designed to measure the performance of a portfolio of futures contracts on carbon credits issued under the Regional Greenhouse Gas Initiative ("RGGI") "cap and trade" regime ("carbon credit futures"). The Index includes only carbon credit futures that mature in December of the next one to two years.

The RGGI is a cooperative market-based effort among the states of Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, Vermont, and Virginia to cap and reduce CO₂ emissions from the power sector. It represents the first cap-and-trade regional initiative implemented in the United States.

Additional Information About the Funds

Investment Risks

The following section provides additional information regarding certain of the principal risks of investing in the Fund. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves a risk of a total loss. There is no guarantee that the Fund will meet its investment objective.

Risk	KGHG	KRBN	KEUA	KCCA	KRGI

Carbon Emission Allowance and Cap and Trade Risk. Cap and trade regimes and related markets are new and based on scientific principles that are subject to debate. Cap and trade regimes have arisen primarily due to relative international consensus with respect to scientific evidence indicating a correlation between the rise in global temperatures and extreme weather events, on the one hand, and the rise in GHG emissions in the atmosphere, on the other hand. If this consensus were to break down, cap and trade regimes and the value of the Fund may be negatively affected. Additionally, if the science supporting the relationship or the acceptable level of GHG concentrations is questioned, it may negatively affect cap and trade regimes and the value of the Fund.

There is no assurance that cap and trade regimes will continue to exist. Cap and trade was designed to attempt to put a cap on pollution by putting a price on carbon emissions, but the approach may not prove to be an effective method of reduction in GHG emissions and or in achieving climate change objectives. As a result or due to other factors, cap and trade regimes may be terminated or may not be renewed upon their expiration. The European Union Emissions Trading System (“EU ETS”) is organized into a number of phases, each with a predetermined duration. Currently, the EU ETS is in Phase III. There can be no assurance that the EU ETS will enter into a new phase as scheduled.

New technologies may arise that may diminish or eliminate the need for cap and trade markets. Ultimately, the cost of emissions credits is determined by the cost of actually reducing emissions levels. If the price of credits becomes too high, it will be more economical for companies to develop or invest in green technologies, thereby suppressing the demand for credits and adversely affecting the price of the Fund.

Cap and trade regimes set emission limits (i.e., the right to emit a certain quantity of GHG emissions), which can be allocated or auctioned to the parties in the mechanism up to the total emissions cap. This allocation may be larger or smaller than is needed for a stable price of credits and can lead to large price volatility, which could affect the value of the Fund. Depending upon the industries covered under the cap and trade regime, unpredictable demand for their products and services can affect the value of GHG emissions credits. For example, very mild winters or very cool summers can decrease demand for electric utilities and therefore require fewer carbon credits to offset reduced production and GHG emissions.

The economic health of GHG emitting companies and their ability to pass on the cost of emissions credits to consumers can affect the price of the carbon credit futures. If the price of emissions can be passed on to the end customer with little impact upon consumer demand, it is likely that industries may continue emitting and purchase any shortfall in the market at the prevailing price. If, however, the producer is unable to pass on the cost, it may be incentivized to reduce production in order to decrease its need for offsetting emissions credits, which could adversely affect the price of carbon credit futures and the Fund.

Additional Information About the Funds

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. Holding cash or cash equivalents, even strategically, may lead to missed investment opportunities. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Clean and Low-Emission Energy Technology Risk. A wide range of clean and low-emission energy technologies and processes are being advanced as candidates for adoption by corporations seeking to decarbonize their operations. There can be no assurance that any particular technology will be economically deployed to achieve the desired corporate objectives, and individual technologies implemented by corporations in the pursuit of decarbonization may differ in cost and efficacy than expected. The Fund will invest in companies producing and utilizing a variety of clean and emission reducing energy technologies and approaches. As a result, the Adviser seeks to minimize the risk to the Fund from the reliance on any particular technological approach. At the time of investment by the Fund, a company may not be a low carbon emitter, but rather will be actively seeking to reduce its carbon footprint, the carbon footprint of its suppliers and/or customers, and/or develop new revenue streams from decarbonization activities.

Climate Change Regulatory Risk. Regulatory risk related to changes in regulation and enforcement of cap and trade regimes could adversely affect market behavior. If fines or other penalties for non-compliance are not enforced, incentives to purchase GHG credits will deteriorate, which can result in a fall in the price of emissions credits and a drop in the value of the Fund. Cap and trade markets relating to GHG emissions are relatively recent, the first such regime arising in 2001. Accordingly, historical performance of these markets may not be indicative of future performance, and future performance of cap and trade markets may be hard to predict. In addition, as cap and trade markets develop, new regulation with respect to these markets may arise, which may have a negative effect on the value and liquidity of the cap and trade markets and the Fund.

Commodity-Linked Derivatives Risk. The value of a commodity-linked derivative investment is typically based upon the price movements of a physical commodity (such as heating oil, precious metals, livestock, or agricultural products), a commodity futures contract or commodity index, or some other readily measurable economic variable. Commodity-linked derivatives provide exposure, which may include long and/or short exposure, to the investment returns of physical commodities that trade in the commodities markets without investing directly in physical commodities. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, volatility of the Index, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. The value of commodity-linked derivatives will rise or fall in response to changes in the underlying commodity or related index. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. A highly liquid secondary market may not exist for certain commodity-linked derivatives, and there can be no assurance that one will develop.

Commodity Pool Registration Risk. Under amended regulations promulgated by the U.S. Commodities Futures Trading Commission (“CFTC”), the Fund and the Subsidiary will be considered commodity pools upon commencement of operations, and therefore each will be subject to regulation under the Commodity Exchange Act and CFTC rules. The Adviser will register as a commodity pool operator and will manage the Fund and the Subsidiary in accordance with CFTC rules, as well as the rules

Additional Information About the Funds

that apply to registered investment companies. Commodity pools are subject to additional laws, regulations and enforcement policies, all of which may potentially increase compliance costs and may affect the operations and financial performance of the Fund and the Subsidiary. Additionally, positions in futures and other derivative contracts may have to be liquidated at disadvantageous times or prices to prevent the Fund from exceeding any applicable position limits established by the CFTC. Such actions may subject the Fund to substantial losses.

Concentration Risk. The Fund's assets are expected to be concentrated in carbon credit futures and its investments could react similarly to market developments. Thus, the Fund is subject to loss due to adverse occurrences that may affect that industry or group of industries or sector. The prices and performance of carbon credit futures may be particularly affected by developments in the following sector:

Energy Sector Risk. Investments in, and/or exposure to, the energy sector, which includes energy commodities, may be highly volatile and can change quickly and unpredictably due to a number of factors, including the legislative or regulatory changes, adverse market conditions, increased competition affecting the energy sector, financial, accounting and tax matters and other events that the Fund cannot control. In addition, the value of energy commodities may fluctuate widely due to changes in supply and demand.

The energy sector is typically cyclical and highly dependent upon commodities and energy prices. Issuers in this sector are usually subject to substantial government regulation and contractual fixed pricing, which may increase the cost of business and limit these issuers' earnings, and a significant portion of their revenues depends on a relatively small number of customers, including governmental entities and utilities.

Currency Risk. The Fund's NAV is determined on the basis of the U.S. dollar. The Fund may lose value if a foreign currency to which the Fund is exposed depreciates against the U.S. dollar, even if the local currency value of the Fund's holdings goes up. The Fund's assets will be invested in the securities of foreign issuers and the income received by the Fund may be in foreign currencies. The Fund will compute and expects to distribute its income in U.S. dollars, and the computation of income will be made on the date that the income is earned by the Fund at the foreign exchange rate in effect on that date. Any gain or loss attributable to fluctuations in exchange rates between the time the Fund accrues income or gain and the time the Fund converts such income or gain from a foreign currency to the dollar is generally treated as ordinary income or loss. Therefore, if the value of a foreign currency increases relative to the U.S. dollar between the accrual of income and the time at which the Fund converts the foreign currency to U.S. dollars, the Fund will recognize ordinary income upon conversion. In such circumstances, if the Fund has insufficient cash in U.S. dollars to meet distribution requirements under the Internal Revenue Code of 1986, as amended (the "Code"), the Fund may be required to liquidate certain positions in order to make distributions. The liquidation of investments, if required, may also have an adverse impact on the Fund's performance. Furthermore, the Fund may incur costs in connection with conversions between U.S. dollars and foreign currencies. Foreign exchange dealers realize a profit based on the difference between the prices at which they are buying and selling various currencies. Thus, a dealer normally will offer to sell a foreign currency to the Fund at one rate, while offering a lesser rate of exchange should the Fund desire immediately to resell that currency to the dealer.

The Fund will conduct its foreign currency exchange transactions either on a spot (*i.e.*, cash) basis at the spot rate prevailing in the foreign currency exchange market, or through forward, futures or options contracts to purchase or sell foreign currencies. The use of currency transactions could

Additional Information About the Funds

result in the Fund's incurring losses as a result of the imposition of exchange controls, exchange rate regulation, suspension of settlements or the inability to deliver or receive a specified currency. Delays in converting or transferring U.S. dollars to foreign currencies for the purpose of purchasing foreign securities could leave the Fund with uninvested cash, may adversely affect the Fund's performance, since any delay could result in the Fund missing an investment opportunity and purchasing securities at a higher price than originally intended, and cause the Fund to incur cash drag. Delays in converting or transferring foreign currencies to U.S. dollars could also inhibit the Fund's ability to meet redemptions or make distributions.

Decarbonization Government Policy Risk. The adoption of clean and low-emission energy technologies and processes is currently driven in part by government policies targeting reduced greenhouse gas (GHG) emissions. Currently, more than 100 countries have committed to becoming carbon neutral by 2050, with many of them having earlier target dates. If governments globally were to abandon or diminish their GHG reduction initiatives, this may have the effect of reducing the corporate incentives to adopt clean and low-emission energy technologies and processes, resulting in less activity in this area and potentially adversely affecting the Fund.

Depository Receipts Risk. The Fund may hold the securities of foreign companies in the form of depository receipts, including American Depositary Receipts ("ADRs") and Global Depositary Receipts. Investing in depository receipts entails additional risks associated with foreign investments. The underlying securities of the depository receipts in the Fund's portfolio are subject to fluctuations in foreign currency exchange rates that may affect the value of the Fund's portfolio. In addition, the value of the securities underlying the depository receipts may change materially when the U.S. markets are not open for trading, which will affect the value of the depository receipts. Like direct investments in foreign securities, investments in depository receipts involve political and economic risks distinct from those associated with investing in the securities of U.S. issuers.

ADRs are U.S. dollar-denominated receipts representing shares of foreign-based corporations. ADRs are issued by U.S. banks or trust companies, and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investment in ADRs may be less liquid than the underlying shares in their primary trading market. "Sponsored" depository receipts are established jointly by a depository and the underlying issuer, whereas "unsponsored" depository receipts may be established by a depository without participation by the underlying issuer. Holders of an unsponsored depository receipt generally bear all the costs associated with establishing the unsponsored depository receipt. In addition, the issuers of the securities underlying unsponsored depository receipts are not obligated to disclose material information in the United States and, therefore, there may be less information available regarding such issuers and there may not be a correlation between such information and the market value of the depository receipts.

Depository receipts may also be unregistered and unlisted, and may be purchased in the public markets or restricted securities that can be offered and sold only to "qualified institutional buyers" under Rule 144A of the Securities Act of 1933, as amended (the "Securities Act"). If a particular investment in such ADRs becomes illiquid, that investment will be included within the Fund's limitation on investment in illiquid securities. Moreover, if adverse market conditions were to develop during the period between the Fund's decision to sell these types of ADRs and the point at which the Fund is permitted or able to sell such security, the Fund might obtain a price less favorable than the price that prevailed when it decided to sell or may be unable to sell it at all.

Additional Information About the Funds

Derivatives Risk. Derivatives are financial instruments, such as swaps, futures, forwards, structured notes and options, whose values are based on the value of one or more reference assets, such as a security, asset, currency, interest rate or index. Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. For example, derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the reference asset(s). Derivative transactions can create investment leverage, which implicates risks greater than those associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile.

Many derivative transactions are entered into “over-the-counter” (not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of the Fund’s counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, the Fund’s contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the Fund’s rights as a creditor (e.g., the Fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for the Fund’s derivative positions at any time. If a derivative transaction is centrally cleared, it will be subject to the rules of the clearing exchange and subject to risks associated with the exchange.

Derivatives can be illiquid and imperfectly correlate with the reference asset(s), resulting in unexpected returns that could materially adversely affect the Fund. Some derivatives can have the potential for unlimited loss. Many derivatives are subject to segregation requirements, pursuant to which the Fund must segregate the market or notional value of the derivatives and which could impede the portfolio management of the Fund. It is possible that developments in the derivatives market, including ongoing or potential government regulation, could adversely affect the Fund’s ability to enter into new derivatives agreements, terminate existing derivative agreements or to realize amounts to be received under such instruments.

Counterparty Risk. Because many derivatives are an obligation of the counterparty rather than a direct investment in the reference asset, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations under the derivative agreement as a result of bankruptcy or otherwise. Any loss would result in a reduction in the NAV of the Fund and will likely impair the Fund’s ability to achieve its investment objective. The counterparty risk associated with the Fund’s investments will be greater if the Fund uses only a limited number of counterparties. If there are only a few potential counterparties, the Fund, subject to applicable law, may enter into transactions with as few as one counterparty at any time.

Forward Currency Contracts Risk. A forward foreign currency contract involves a negotiated obligation to purchase or sell a specific currency at a future date (with or without delivery required), which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. Forward foreign currency contracts are not traded on exchanges; rather, a bank or dealer will act as agent or as principal in order to make or take future delivery, exposing the Fund to counterparty risk.

Futures Risk. In addition to the above, risks associated with the use of futures contracts include the following: (i) an imperfect correlation between movements in prices of futures contracts and movements in the value of the reference asset(s) it is designed to simulate; and (ii) the possibility of an illiquid secondary market for a futures contract and the resulting inability to close a

Additional Information About the Funds

position prior to its maturity date. When the Fund purchases or sells a futures contract, it is subject to daily variation margin calls that could be substantial. If the Fund has insufficient cash to meet daily variation margin requirements, it might need to sell securities at a time when such sales are disadvantageous.

Leveraging Risk. The Fund's investment in derivative instruments provide leveraged exposure. The Fund's investment in these instruments generally requires a small investment relative to the amount of investment exposure assumed. As a result, such investments may give rise to losses that exceed the amount invested in those instruments. The use of derivatives may expose the Fund to potentially dramatic losses (or gains) in the value of a derivative or other financial instrument and, thus, in the value the Fund's portfolio. The cost of investing in such instruments generally increases as interest rates increase, which will lower the Fund's return.

Options Risk. An option is a contract that gives the purchaser (holder) of the option, in return for a premium, the right to buy from (call) or sell to (put) the seller (writer) of the option the security or currency underlying the option at a specified exercise price at any time during the term of the option (normally not exceeding nine months). The writer of an option has the obligation upon exercise of the option to deliver the underlying security or currency upon payment of the exercise price or to pay the exercise price upon delivery of the underlying security or currency. Options are derivatives, which, as described above, can be illiquid, can imperfectly correlate with the reference asset(s), and are subject to segregation requirements.

Options on Futures Contracts Risk. An option on a futures contract provides the holder with the right to enter into a "long" position in the underlying futures contract, in the case of a call option, or a "short" position in the underlying futures contract in the case of a put option, at a fixed exercise price to a stated expiration date. Upon exercise of the option by the holder, the contract market clearing house establishes a corresponding short position for the writer of the option, in the case of a call option, or a corresponding long position, in the case of a put option. Options are derivatives, which, as described above, can be illiquid, can imperfectly correlate with the reference asset(s), and are subject to segregation requirements.

Swaps Risk. To the extent the Fund invests in swaps, it will be subject to the risk that the number of counterparties able to enter into swaps to provide exposure to a desired reference asset may be limited. Swaps are of limited duration and there is no guarantee that swaps entered into with a counterparty will continue indefinitely. Accordingly, the duration of a swap depends on, among other things, the ability of the Fund to renew the expiration period of the relevant swap at agreed upon terms.

Emerging Markets Risk. Investments in developing or emerging markets issuers involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments. For example, in comparison with developed markets, developing and emerging markets may be subject to greater market volatility; greater risk of asset seizures and capital controls; lower trading volume and liquidity; greater social, political and economic uncertainty; governmental controls on foreign investments and limitations on repatriation of invested capital; greater risk of market shutdown; lower disclosure, corporate governance, auditing and financial reporting standards; fewer protections of property rights; restrictions on the transfer of securities or currency; and settlement and trading practices that differ from U.S. or developed markets. Shareholder claims and legal remedies that are common in the United States may be difficult or impossible to pursue in many emerging market countries. In addition, due to jurisdictional limitations,

Additional Information About the Funds

matters of comity and various other factors, U.S. authorities may be limited in their ability to bring enforcement actions against non-U.S. companies and non-U.S. persons in certain emerging market countries. Most emerging market companies are not subject to the uniform accounting, auditing and financial reporting requirements applicable to issuers in the United States, which may impact the availability and quality of information about emerging market issuers. Additionally, in times of market stress, regulatory authorities of different emerging market countries may apply varying techniques and degrees of intervention. Securities of issuers traded on foreign exchanges may be suspended, either by the issuers themselves, by an exchange, or by governmental authorities. The likelihood of such suspensions may be higher for securities of issuers in emerging or less-developed market countries than in countries with more developed markets. Trading suspensions may be applied from time to time to the securities of individual issuers for reasons specific to that issuer, or may be applied broadly by exchanges or governmental authorities in response to market events. Suspensions may last for significant periods of time, during which trading in the securities and in instruments that reference the securities, such as derivative instruments, may be halted. Each of these factors may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund shares, and cause the Fund to decline in value.

Energy Sector Risk. Investments in, and/or exposure to, the energy sector may be highly volatile and can change quickly and unpredictably due to a number of factors, including political, legislative and/or regulatory changes, adverse market conditions, increased competition affecting the energy sector, financial, accounting and tax matters and other events that the Fund cannot control. In addition, the value of energy commodities may fluctuate widely due to changes in supply and demand. The energy sector is typically cyclical and highly dependent upon commodities and energy prices. Issuers in this sector are usually subject to substantial government regulation and may be subject to contractual fixed pricing, which may increase the cost of business and limit these issuers' earnings, and a significant portion of their revenues depends on a relatively small number of customers, including governmental entities and utilities.

Equity Securities Risk. Equity securities are subject to volatile changes in value that may be attributable to market perception of a particular issuer or to general stock market fluctuations that affect all issuers. Investments in equity securities are subject to volatile changes in market value and their values may be more volatile than investments in other asset classes. In the event of liquidation, equity securities are generally subordinate in rank to debt and other securities of the same issuer.

ETF Risk. As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for exchange-traded funds ("ETFs"), such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

International Closed Market Trading Risk. To the extent the Fund's investments trade in markets that are closed when the Fund and Exchange are open, there are likely to be deviations between current pricing of an underlying security and the prices at which the underlying securities are valued for purposes of the Fund's NAV. As a result, Shares may appear to trade at a significant

Additional Information About the Funds

discount or premium to NAV greater than those incurred by other ETFs. In addition, shareholders may not be able to purchase or redeem their shares of the Fund, or purchase or sell shares of the Fund on the Exchange, on days when the NAV of the Fund could be significantly affected by events in the relevant non-U.S. markets.

Premium/Discount Risk. The NAV of the Fund's shares will generally fluctuate with changes in the market value of the Fund's securities holdings. The market prices of Fund shares will generally fluctuate in accordance with changes in the Fund's NAV and supply and demand of shares on the secondary market. It cannot be predicted whether Fund shares will trade below (at a discount), at or above (at a premium) their NAV. As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop-loss orders to sell Fund shares may be executed at market prices that are significantly below NAV. Price differences may be due, in part, to the fact that supply and demand forces at work in the secondary trading market for shares may be closely related to, but not identical to, the same forces influencing the prices of the securities of the Fund trading individually. The market prices of Fund shares may deviate significantly from the NAV of the shares during periods of market volatility or if the Fund's holdings are or become more illiquid. Disruptions to creations and redemptions may result in trading prices that differ significantly from the Fund's NAV. In addition, market prices of Fund shares may deviate significantly from the NAV if the number of Fund shares outstanding is smaller or if there is less active trading in Fund shares. Investors purchasing and selling Fund shares in the secondary market may not experience investment results consistent with those experienced by those creating and redeeming directly with the Fund.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of shares. In addition, secondary market investors will incur the cost of the difference between the price that an investor is willing to pay for shares (the bid price) and the price at which an investor is willing to sell shares (the ask price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread, which increases the cost of purchasing and selling Fund shares, varies over time for shares based on trading volume and market liquidity, and is generally lower if the Fund's shares have more trading volume and market liquidity and higher if the Fund's shares have little trading volume and market liquidity. Increased market volatility may cause increased bid-ask spreads.

Although Fund shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such shares will develop or be maintained or that the Fund's shares will continue to be listed. Trading in Fund shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable. In addition, trading in shares is subject to trading halts caused by extraordinary market volatility pursuant to Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of any Fund will continue to be met or will remain unchanged or that the shares will trade with any volume, or at all.

ETF Risk – New Fund Risk. The Fund is new and does not yet have a significant number of shares outstanding. If the Fund does not grow in size, it will be at greater risk than larger funds of wider bid-ask spreads for its shares, trading at a greater premium or discount to NAV, liquidation and/or a

Additional Information About the Funds

trading halt. The Fund also is subject to the continued listing standards of the Exchange, with which the Fund must comply in order to continue being listed on the Exchange. Among other requirements, the continued listing standards require a minimum number of shareholders.

ETF Risk – Small Fund Risk. The Fund is small and does not yet have a significant number of shares outstanding. Small funds are at greater risk than larger funds of wider bid-ask spreads for its shares, trading at a greater premium or discount to NAV, liquidation and/or a trading halt. The Fund also is subject to the continued listing standards of the Exchange, with which the Fund must comply in order to continue being listed on the Exchange. Among other requirements, the continued listing standards require a minimum number of shareholders.

Fixed Income Securities Risk. Investing in fixed income securities subjects the Fund to the following risks:

Credit Risk. The Fund could lose money if the issuer of a fixed income security is unable to meet its repayment obligations in a timely manner, or if negative perceptions of the issuer's ability to make such payments cause the price of the bond to decline.

Income Risk. The Fund's income may decline due to falling interest rates. During a period of falling interest rates, income risk is generally higher for short term bond funds, moderate for intermediate term bond funds and low for long term bond funds. Therefore, investors should expect the Fund's income to fluctuate accordingly.

Interest Rate Risk. Interest rate risk is the risk that the securities in the Fund's portfolio will decline in value because of increases in market interest rates. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than debt securities with shorter durations. Duration is a measure of a fixed income security's sensitivity to changes in interest rates. For every 1% change in interest rates, a bond's price generally changes approximately 1% in the opposite direction for every year of duration. For example, if a portfolio of fixed income securities has an average weighted duration of three years, its value can be expected to fall about 3% if interest rates rise by 1%. Conversely, the portfolio's value can be expected to rise approximately 3% if interest rates fall by 1%. Unlike maturity, which considers only the date on which the final repayment of principal will be made, duration takes account of interim payments made during the life of the security. Duration is typically not equal to maturity. Interest rates have recently been historically low but have recently increased and may continue to increase, potentially quickly and significantly, thereby heightening the Fund's exposure to the risks associated with rising rates.

Issuer Risk. There may be economic or political changes that impact the ability of issuers to repay principal and to make interest payments on securities. Changes to the financial condition or credit rating of issuers may also adversely affect the value of the Fund's securities.

Reinvestment Risk. The Fund's performance may be adversely impacted when interest rates fall because the Fund must invest in lower-yielding bonds as bonds in its portfolio mature.

Foreign Investments Risk. Foreign investments may involve higher costs than U.S. investments, including higher transaction and custody costs as well as the imposition of additional taxes by foreign governments. Foreign investments may also involve risks associated with currency exchange rates, less complete financial information, less market liquidity, more market volatility and political and economic instability. Future political and economic developments, the difficulty of enforcing obligations in other countries, the possible imposition of withholding or confiscatory taxes, the possible seizure

Additional Information About the Funds

or nationalization of foreign holdings, the possible establishment of exchange controls or freezes on the convertibility of currency, or the adoption of other governmental restrictions might adversely affect a foreign investment. Additionally, foreign investments, especially investments in emerging markets, may be subject to less stringent regulation, and to different accounting, auditing, recordkeeping, financial reporting, and investor protection requirements. Foreign investments typically are less liquid than U.S. investments. The value of foreign investments may change materially when the U.S. markets are not open for trading.

Income from non-U.S. investments, including gains on the sale of such investments, may be subject to foreign taxes. Even if the Fund qualifies to pass these taxes through to shareholders, the ability to claim a credit for such taxes may be limited, particularly in the case of taxes on capital gains.

Foreign markets may have clearance and settlement procedures that make it difficult for the Fund to buy and sell its investments. This could result in a loss to the Fund by causing the Fund to be unable to dispose of an investment or to miss an attractive investment opportunity, or by causing the Fund's assets to be uninvested for some period of time, or cause the Fund to face delays or difficulties in meeting redemptions.

Foreign investment risks may be greater in developing and emerging markets than in developed markets.

From time to time, certain of the issuers of investments purchased by a Fund may operate in, or have dealings with, countries that may become subject to sanctions or embargoes imposed by the U.S. Government and the United Nations and/or countries identified by the U.S. Government as state sponsors of terrorism. An issuer may suffer damage to its reputation and value if it is identified as such an issuer. Any Fund investment in such issuers will be indirectly subject to those risks.

Foreign Securities Risk. Investment in foreign securities may involve higher costs than investment in U.S. securities, including higher transaction and custody costs as well as the imposition of additional taxes by foreign governments. Foreign investments may also involve risks associated with currency exchange rates, less complete financial information about the issuers, less market liquidity, more market volatility and political and economic instability. Future political and economic developments, the difficulty of enforcing obligations in other countries, the possible imposition of withholding or confiscatory taxes, the possible seizure or nationalization of foreign holdings, the possible establishment of exchange controls or freezes on the convertibility of currency, or the adoption of other governmental restrictions might adversely affect an investment in foreign securities. Additionally, foreign issuers, especially issuers in emerging markets, may be subject to less stringent regulation, and to different accounting, auditing, recordkeeping, financial reporting, and investor protection requirements. Investments in foreign securities typically are less liquid than investments in U.S. securities. The value of foreign securities may change materially when the U.S. markets are not open for trading.

Income from securities of non-U.S. issuers, including gains on the sale of such securities, may be subject to foreign taxes, which would be the responsibility of the Fund. Even if the Fund qualifies to pass these taxes through to shareholders, the ability to claim a credit for such taxes may be limited, particularly in the case of taxes on capital gains.

Foreign markets may have clearance and settlement procedures that make it difficult for the Fund to buy and sell securities. This could result in a loss to the Fund by causing the Fund to be unable to dispose of an investment or to miss an attractive investment opportunity, or by causing the Fund's assets to be uninvested for some period of time, or cause the Fund to face delays or difficulties in meeting shareholder redemptions.

Additional Information About the Funds

Foreign investment risks may be greater in developing and emerging markets than in developed markets.

From time to time, certain of the issuers of securities purchased by the Fund may operate in, or have dealings with, countries that may become subject to sanctions or embargoes imposed by the U.S. Government and the United Nations and/or countries identified by the U.S. Government as state sponsors of terrorism. A company may suffer damage to its reputation and value if it is identified as such a company. Any Fund investment in such companies will be indirectly subject to those risks.

Futures Strategy Risk. Successful use of futures contracts draws upon the Adviser's skill and experience with respect to such instruments and is subject to special risk considerations. The primary risks associated with the use of futures contracts include: (a) an imperfect correlation between the change in market value of the reference asset and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the inability to predict correctly the direction of market prices, interest rates, currency exchange rates and other economic factors; and (e) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a loss.

As a futures contract the Fund owns approaches its settlement date, the Fund may sell that futures contract and reinvest the proceeds in a similar contract with a more distant settlement date. This process is referred to as "rolling" a futures contract. The successful use of such a strategy depends upon the Adviser's skill and experience. Although the Fund will attempt to roll from an expiring futures contract to another contract that the Adviser believes will generate the greatest yield for the Fund, the Fund nevertheless may incur a cost to "roll" the contract. In a commodity futures market where current month expiring contracts trade at a lower price than next month's contract, a situation referred to as "contango," absent the impact of the overall movement in commodity prices, the Fund may experience an adverse impact because it would be selling less expensive contracts and buying more expensive contracts. In the event of a prolonged period of contango, and absent the impact of rising or falling commodity prices, there could be a significant negative impact on the Fund when it "rolls" its futures contract positions.

Investment in exchange-traded futures contracts may expose the Fund to the risks of a clearing broker (or a futures commission merchant ("FCM")). Under current regulations, a clearing broker or FCM maintains customers' assets in a bulk segregated account. There is a risk that Fund assets deposited with the clearing broker to serve as margin may be used to satisfy the broker's own obligations or the losses of the broker's other clients. In the event of default, the Fund could experience lengthy delays in recovering some or all of its assets and may not see any recovery at all.

Geographic Focus Risk. The Fund's investments are expected to be focused in a particular country, countries, or region and, therefore the Fund will be susceptible to adverse market, political, regulatory, and geographic events affecting those regions. The Fund is less diversified across countries or geographic regions and generally riskier than more geographically diversified funds.

European Union Risk. Because the Fund will gain exposure to carbon credit futures issued under the European Union Emissions Trading System "cap and trade" program, the Fund's performance also may be negatively impacted by factors affecting the European Union. The economies of the European Union are dependent to a significant extent on those of certain key trading partners, including China, the United States, and other European countries. A reduction in spending on

Additional Information About the Funds

products and services exported from the European Union, or volatility in the financial markets of member countries, may have an adverse impact on the broader European Union economy and could adversely affect the Fund. Separately, the European Union faces issues involving its membership, structure, procedures and policies. The United Kingdom (UK) officially withdrew from the European Union on January 31, 2020. Upon the UK's withdrawal from the European Union, the European Union and the UK entered into a transition phase, which concluded on December 31, 2020, and the UK and the European Union agreed upon a Trade and Cooperation Agreement that became fully effective on May 1, 2021. The UK, European Union and broader global economy may still experience volatility in foreign exchange markets as a result of these events. The UK's withdrawal may also destabilize some or all of the other European Union member countries and/or the Eurozone. The exit of additional member states from the European Union would subject its currency and banking system to increased risk and would likely result in increased volatility, illiquidity and potentially lower economic growth in the affected markets. Additionally, the reintroduction of national currencies in one or more European Union countries or the abandonment of the Euro as a currency could adversely affect the Fund.

California Risk. Because the Fund will gain exposure to carbon credit futures issued under the California Carbon Allowance “cap and trade” program, the Fund's performance also may be negatively impacted by factors affecting California. For example, natural disasters may disrupt the local, state or regional economy or certain sectors of the economy and may impact the prices of such carbon credit futures. California's budget and fiscal operations face certain structural impediments and rely on revenue sources which have been historically sensitive to the economic environment. California's diverse economy is the largest in the United States and one of the largest in the world with major components including high technology, trade, entertainment, manufacturing, tourism, construction, agriculture and services. Any downturn in these sectors or related industries may adversely affect the economy of the state and the prices of such carbon credit futures.

Quebec Risk. Because the Fund will gain exposure to carbon credit futures issued under the California Carbon Allowance “cap and trade” program, the Fund's performance also may be negatively impacted by factors affecting Quebec. Quebec is a province in Canada, which has a separatist party whose objective is to achieve sovereignty and increased self-governing legal and financial powers. In addition, the Canadian market, including Quebec, is relatively concentrated in issuers involved in the production and distribution of natural resources such as forest products, metals, agricultural products, and energy related products like oil, gas, and hydroelectricity. Accordingly, any downturn in these sectors or related industries may adversely affect the economy of Canada and Quebec and the prices of such carbon credit futures.

Eastern U.S. Risk. Because the Fund will gain exposure to carbon credit futures issued under the Regional Greenhouse Gas Initiative (“RGGI”) “cap and trade” program, the Fund's performance also may be negatively impacted by factors affecting the Eastern region of the United States. For example, flooding, warming temperatures, and precipitation variability are growing challenges in the Eastern region of the United States and may disrupt the local, state, or regional economies of the Eastern states or certain sectors of those economies and may impact the prices of such carbon credit futures. The economies of Eastern region of the United States are comprised of components including agriculture, tourism, and manufacturing. Any downturn in these sectors or related industries may adversely affect the economy of the Eastern region of the United States and the prices of such carbon credit futures.

Additional Information About the Funds

High Portfolio Turnover Risk. The Fund may incur high turnover rates. This may increase the Fund's brokerage commission costs. The performance of the Fund could be negatively impacted by the increased brokerage commission costs incurred by the Fund. Rapid portfolio turnover also exposes shareholders to a higher current realization of net short-term capital gains, distributions of which would generally be taxed to you as ordinary income and thus cause you to pay higher taxes.

Industrials Sector Risk. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. Government regulation may in particular affect the aerospace and defense companies, which rely to a significant extent on government demand for their products and services. Transportation companies, another component of the industrials sector, are subject to sharp price movements resulting from changes in the economy, fuel prices, labor agreements and insurance costs.

Information Technology Sector Risk. Market or economic factors impacting information technology companies and companies that rely heavily on technology advances could have a major effect on the value of stocks in the information technology sector. The value of stocks of technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from competitors with lower production costs. Information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability. Additionally, companies in the information technology sector may face dramatic and often unpredictable changes in growth rates and competition for the services of qualified personnel.

Investment in Investment Companies Risk. The Fund may purchase shares of investment companies, such as ETFs, unit investment trusts, closed-end investment companies and foreign investment companies, including those that are advised, sponsored or otherwise serviced by Krane and/or its affiliates, to gain exposure to particular investments or when such investments present a more cost efficient alternative to investing directly in securities. When the Fund invests in an investment company, in addition to directly bearing the expenses associated with its own operations, it will bear a pro rata portion of the underlying investment company's expenses. An investor in the Fund may receive taxable gains as a result of an underlying fund's portfolio transactions in addition to the taxable gains attributable to the Fund's transactions in shares of the underlying fund. Further, in part because of these additional expenses, the performance of an investment company may differ from the performance the Fund would achieve if it invested directly in the underlying investments of the investment company. In addition, while the risks of owning shares of an investment company generally reflect the risks of owning the underlying investments of the investment company, the Fund may be subject to additional or different risks than if the Fund had invested directly in the underlying investments. For example, shares of an ETF are traded at market prices, which may vary from the NAV of its underlying investments. Also, the lack of liquidity in an ETF can contribute to the increased volatility of its value in comparison to the value of the underlying portfolio securities. To the extent that the Fund invests in investment companies or other pooled investment vehicles that are not registered pursuant to the 1940 Act, including foreign investment companies, it will not enjoy the protections

Additional Information About the Funds

of the 1940 Act. In addition, to the extent the Fund invests in other investment companies, including ETFs, sponsored, advised or otherwise serviced by Krane, its sub-adviser, as applicable, or their affiliates, they may be subject to conflicts of interest in allocating Fund assets, particularly if they are paid an advisory fee both by the Fund and the fund in which the Fund invests.

Large Capitalization Company Risk. Investments in large capitalization companies may go in and out of favor based on market and economic conditions and may underperform other market segments. Some large capitalization companies may be unable to respond quickly to new competitive challenges and attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion. As such, returns on investments in stocks of large capitalization companies could trail the returns on investments in stocks of small and mid-capitalization companies.

Liquidity Risk. The Fund's investments are subject to liquidity risk, which exists when an investment is or becomes difficult to purchase or sell at a reasonable time and price. If a transaction is particularly large or if the relevant market is or becomes illiquid, it may reduce the potential returns of the Fund because it may be unable to sell the illiquid securities at an advantageous time or price, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. This is especially true given the limited number of market participants in certain markets in which the Fund may invest. Market developments may cause the Fund's investments to become less liquid and subject to erratic price movements, and may also cause the Fund to encounter difficulties in timely honoring redemptions, especially if market events cause an increased incidence of shareholder redemptions. If a number of investments held by the Fund stop trading or become illiquid, such as due to an exchange's limit up, limit down rules, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt. To the extent that an investment is deemed to be an illiquid investment or a less liquid investment, the Fund can expect to be exposed to greater liquidity risk.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Adviser's success or failure to implement investment strategies for the Fund. The Adviser's evaluations and assumptions regarding investments, markets, trends, and other factors may not successfully achieve the Fund's investment objective given actual market conditions.

Market Risk. The values of the Fund's holdings could decline generally or could underperform other investments. Market fluctuations could be caused by such factors as economic and political developments, changes in interest rates and perceived trends in securities prices. Recent developments in relations between the United States and its trading partners have heightened concerns of increased tariffs and restrictions on trade between the U.S. and other countries. An increase in tariffs or trade restrictions, or even the threat of such developments, could lead to a significant reduction in international trade, which could have a negative impact on the world's export industry and a commensurately negative impact on financial markets. Different types of securities tend to go through cycles of outperformance and under-performance in comparison to the general securities markets. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally. Therefore, the Fund is susceptible to the risk that certain holdings may be difficult or impossible to sell at a favorable time or price.

Turbulence in the financial markets and reduced liquidity in equity, credit and fixed-income markets may negatively affect issuers worldwide, which could have an adverse effect on the Fund. The Federal Reserve and other domestic and foreign government agencies may attempt to stabilize the global economy. These actions may expose markets to heightened volatility and may reduce liquidity for

Additional Information About the Funds

certain Fund investments, causing the value of the Fund's investments and share price to decline. To the extent that the Fund experiences high redemptions because of these actions, the Fund may experience increased portfolio turnover, which will increase the costs that the Fund incurs and will lower the Fund's performance.

Geopolitical risks, including terrorism, tensions or open conflict between nations, or political or economic dysfunction within some nations that are major players on the world stage or major producers of oil, may lead to overall instability in world economies and markets generally and have led, and may in the future lead, to increased market volatility and may have adverse long-term effects. Similarly, environmental and public health risks, such as natural disasters or pandemics/epidemics, or widespread fear that such events may occur, may impact markets adversely and cause market volatility in both the short- and long-term.

Certain illnesses spread rapidly and have the potential to significantly and adversely affect the global economy. Epidemics and/or pandemics have and may further result in, among other things, closing borders, enhanced health screenings, healthcare service preparation and delivery, quarantines, cancellations, disruptions to supply chains and customer activity, as well as general concern and uncertainty. The impact of such epidemics and/or pandemics that may arise in the future, has the potential to affect the economies of many nations, individual companies and the global securities and commodities markets, including liquidity, in ways that cannot necessarily be foreseen at the present time. The impact of infectious diseases in developing or emerging market countries may be greater due to less established health care systems. Health crises caused by the recent coronavirus outbreak may exacerbate other preexisting political, social and economic risks in certain countries. The impact of the outbreak may be short term or may last for an extended period of time and may have material adverse impacts on the Fund.

Russia's invasion of the Ukraine, and corresponding events in late February 2022, have had, and could continue to have, severe adverse effects on regional and global economic markets for securities and commodities. Following Russia's actions, various governments, including the United States, have issued broad-ranging economic sanctions against Russia, including, among other actions, a prohibition on doing business with certain Russian companies, large financial institutions, officials and oligarchs; the removal by certain countries and the European Union of selected Russian banks from the Society for Worldwide Interbank Financial Telecommunications ("SWIFT"), the electronic banking network that connects banks globally; and restrictive measures to prevent the Russian Central Bank from undermining the impact of the sanctions. The current events, including sanctions and the potential for future sanctions, including any impacting Russia's energy sector, and other actions, and Russia's retaliatory responses to those sanctions and actions, may continue to adversely impact the Russian economy and may result in the further decline of the value and liquidity of Russian securities, a continued weakening of the ruble and continued exchange closures, and may have other adverse consequences on the Russian economy that could impact the value of Russian investments and impair the ability of the Fund to buy, sell, receive or deliver those securities. Moreover, those events have, and could continue to have, an adverse effect on global markets performance and liquidity, thereby negatively affecting the value of the Fund's investments beyond any direct exposure to Russian issuers. The duration of ongoing hostilities and the vast array of sanctions and related events cannot be predicted. Those events present material uncertainty and risk with respect to markets globally and the performance of the Fund and its investments or operations could be negatively impacted.

Materials Sector Risk. Companies in the materials sector may be adversely affected by commodity price volatility, exchange rates, import controls, increased competition, depletion of resources, over-production, technical progress, labor relations, litigation and government regulations, among

Additional Information About the Funds

other factors. Also, companies in the materials sector are at risk of liability for environmental damage and product liability claims. Production of materials may exceed demand as a result of market imbalances or economic downturns, leading to poor investment returns.

Non-Diversified Fund Risk. Because the Fund is non-diversified and may invest a greater portion of its assets in fewer issuers than a diversified fund, changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

Operational and Cybersecurity Risk. The Fund, Krane, its service providers and your ability to transact with the Fund may be negatively impacted due to operational matters arising from, among other problems, human errors, systems and technology disruptions or failures, or cybersecurity incidents. Cybersecurity incidents may allow an unauthorized party to gain access to fund assets, customer data, or proprietary information, or cause the Fund or its service providers, as well as the securities trading venues and their service providers, to suffer data corruption or lose operational functionality. It is not possible for Krane or the other Fund service providers to identify all of the cybersecurity or other operational risks that may affect the Fund or to develop processes and controls to completely eliminate or mitigate their occurrence or effects.

Passive Investment Risk. The Fund is not actively managed, does not seek to "beat" the Index, and does not take temporary positions when markets decline. Therefore, the Fund may not sell a security due to current or projected underperformance of a security, industry or sector. If a specific security is removed from the Index, the Fund may be forced to sell such security at an inopportune time or for a price other than the security's current market value. It is expected that the value of Fund shares will decline, more or less, in correspondence with any decline in value of the Index. The Index may not contain the appropriate mix of securities for any particular economic cycle, and the timing of movements from one type of security to another in seeking to track the Index could have a negative effect on the Fund. However, the Fund's investment objective and principal investment strategies impose limits on the Fund's ability to invest in securities not included in the Index. There is no guarantee that the Index will create the desired exposure.

Unlike an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than other types of registered investment companies that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline. To the extent the Fund employs a representative sampling approach, it will hold a smaller number of securities than are in the Index. As a result, an adverse development to an issuer of securities that the Fund holds could result in a greater decline in NAV than would be the case if the Fund held more of the securities in the Index.

Regulatory Risk. The Fund is subject to the risk that a change in U.S. law and related regulations will impact the way the Fund operates, increase the particular costs of the Fund's operations and/or change the competitive landscape. Additional legislative or regulatory changes could occur that may materially and adversely affect the Fund. For example, the regulatory environment for derivative instruments in which the Fund may invest is evolving, and changes in the regulation or taxation of derivative instruments may materially and adversely affect the ability of the Fund to pursue its investment objective or strategies. Such legislative or regulatory changes could pose additional risks and result in material adverse consequences to the Fund.

Additional Information About the Funds

Securities Lending Risk. The Fund may lend its portfolio securities to brokers, dealers and financial institutions to seek income. There is a risk that a borrower may default on its obligations to return loaned securities. There is a risk that the assets of the Fund's securities lending agent may be insufficient to satisfy any contractual indemnification requirements to that Fund. Borrowers of the Fund's securities typically provide collateral in the form of cash that is reinvested. The Fund will be responsible for the risks associated with the investment of cash collateral, including any collateral invested in a money market fund. The Fund may lose money on its investment of cash collateral or may fail to earn sufficient income on its investment to meet obligations to the borrower. In addition, delays may occur in the recovery of securities from borrowers, which could interfere with the Fund's ability to vote proxies or to settle transactions and there is the risk of possible loss of rights in the collateral should the borrower fail financially. Krane is subject to potential conflicts of interest because the compensation paid to them increases in connection with any net income received by the Fund from a securities lending program.

Small- and Mid-Capitalization Company Risk. Investing in the securities of small- and mid-capitalization companies involves greater risk and the possibility of greater price volatility than investing in larger capitalization companies and more established companies. Since small- and medium-sized companies may have limited operating histories, product lines and financial resources, the securities of these companies may lack sufficient market liquidity and can be sensitive to expected changes in interest rates, borrowing costs and earnings. These companies' securities may be more volatile and less liquid than those of more established companies, and they may be more sensitive to market conditions.

Subsidiary Investment Risk. Investment in the Subsidiary will not exceed 25% of the value of the Fund's total assets (ignoring any subsequent market appreciation in the Subsidiary's value). This limitation is set pursuant to the Internal Revenue Code of 1986, as amended, and is measured at each taxable year quarter-end. The Subsidiary, which is organized under the laws of the Cayman Islands, is wholly-owned and controlled by the Fund. The Fund will invest in the Subsidiary in order to gain exposure to the investment returns of the commodities markets within the limitations of the federal tax law requirements applicable to regulated investment companies. The Subsidiary will invest principally in commodity futures, options and swap contracts, as well as certain fixed-income investments intended to serve as margin or collateral for the Subsidiary's derivatives positions. Unlike the Fund, the Subsidiary may invest without limitation in commodity-linked derivatives, though the Subsidiary will comply with the same 1940 Act asset coverage requirements with respect to its investments in commodity-linked derivatives that apply to the Fund's transactions in these instruments. To the extent applicable, the Subsidiary otherwise is subject to the same fundamental and non-fundamental investment restrictions as the Fund, and, in particular, to the same requirements relating to portfolio leverage, liquidity, and the timing and method of valuation of portfolio investments and Fund shares, described elsewhere in this Prospectus and in the SAI. By investing in the Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary's commodity-linked derivatives investments.

The Subsidiary is not registered with the SEC as an investment company under the 1940 Act, and is not subject to the investor protections of the 1940 Act. As an investor in the Subsidiary, the Fund does not have the same protections offered to shareholders of registered investment companies.

Additional Information About the Funds

The Fund and the Subsidiary may not be able to operate as described in this Prospectus in the event of changes to the laws of the United States and/or the Cayman Islands. If the laws of the Cayman Islands required the Subsidiary to pay taxes to a governmental authority, the Fund would be likely to suffer decreased returns.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain income and distribution requirements each year and certain asset diversification requirements at the end of each quarter of its taxable year. With respect to the latter, the Fund generally may not acquire a security if, as a result of the acquisition, at the end of a quarter the Fund would not satisfy the following requirements: (a) that at least 50% of the value of its total assets be represented by (i) cash, cash items, Government Securities and securities of other regulated investment companies, and (ii) other securities limited in respect of any of the security to an amount not greater than 5% of the Fund's total assets and to not more than 10% of the voting securities of such issuer; and (b) not more than 25% of the total value of the Fund's assets can be invested in the securities (other than Government Securities or the securities of other regulated investment companies) of any one issuer, the securities of two or more issuers that the Fund controls and are engaged in the same or similar (or related) trades or businesses, or the securities of one or more qualified publically traded partnerships. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income, which would adversely affect its performance.

In order to qualify for the favorable tax treatment generally available to regulated investment companies and avoid Fund-level taxes, the Fund must also satisfy certain distribution requirements. If the Fund fails to satisfy the distribution requirement necessary to qualify for treatment as a regulated investment company for any taxable year, the Fund would be treated as a corporation subject to U.S. federal income tax, thereby subjecting any income earned by the Fund to tax at the corporate level. If the Fund fails to satisfy a separate distribution requirement, it will be subject to a Fund-level excise tax. These Fund-level taxes will apply in addition to taxes payable at the shareholder level on distributions.

To the extent the Fund does not distribute to shareholders all of its investment company taxable income and net capital gain in a given year, it will be required to pay U.S. federal income tax on the retained income and gains, thereby reducing the Fund's return. The Fund may elect to treat its net capital gain as having been distributed to shareholders. In that case, shareholders of record on the last day of the Fund's taxable year will be required to include their attributable share of the retained gain in income for the year as a long-term capital gain despite not actually receiving the dividend, and will be entitled to a tax credit or refund for the tax deemed paid on their behalf by the Fund as well as an increase in the basis of their shares to reflect the difference between their attributable share of the gain and the related credit or refund.

Investments in swaps and other derivatives may be subject to special U.S. federal income tax rules that could adversely affect the character, timing and amount of income earned by the Fund (e.g., by causing amounts that would be capital gain to be taxed as ordinary income or to be taken into income earlier than would otherwise be necessary). Also, the Fund may be required to periodically adjust its positions in its swaps and derivatives to comply with certain regulatory requirements which may further cause these investments to be less efficient than a direct investment in the securities

Additional Information About the Funds

themselves. For example, swaps in which the Fund may invest may need to be reset on a regular basis in order to maintain compliance with the 1940 Act, which may increase the likelihood that the Fund will generate short-term capital gains. In addition, because the application of these special rules may be uncertain, it is possible that the manner in which they are applied by the Fund may be determined to be incorrect. In that event, the Fund may be found to have failed to maintain its qualification as a RIC or to be subject to additional U.S. tax liability. Moreover, the Fund may make investments, both directly and through swaps or other derivative positions, in companies classified as passive foreign investment companies for U.S. federal income tax purposes (“PFICs”). Investments in PFICs are subject to special tax rules which may result in adverse tax consequences to the Fund and its shareholders.

The Fund intends to treat its income from the Subsidiary as qualifying income. The tax treatment of the Fund’s investment in the Subsidiary may be adversely affected by future legislation, court decisions, Treasury Regulations and/or guidance issued by the IRS that could affect whether income derived from such investments is “qualifying income” under Subchapter M of the Internal Revenue Code, or otherwise affect the character, timing and/or amount of the Fund’s taxable income or any gains or distributions made by the Fund.

Tracking Error Risk. Tracking error refers to the risk that the Fund’s performance may not match or correlate to that of its Underlying Index, either on a daily or aggregate basis. Tracking error may cause the Fund’s performance to be less than expected. There are a number of factors that may contribute to the Fund’s tracking error, such as Fund expenses, imperfect correlation between the Fund’s investments and those of the Index, the use of representative sampling strategy, if applicable, asset valuation differences, tax considerations, the unavailability of securities in the Index from time to time, holding cash and cash equivalents, and other liquidity constraints. In addition, securities included in the Index may be suspended from trading. To the extent the Fund calculates its NAV based on fair value prices and the value of the Index is based on securities’ closing prices on local foreign markets, the Fund’s ability to track the Index may be adversely affected. Mathematical compounding may prevent the Fund from correlating with the monthly, quarterly, annual or other period performance of its Index. In addition, the Fund may not invest in certain securities and other instruments included in the Index, or invest in them in the exact proportions they represent of the Index, including due to legal restrictions or limitations imposed by a foreign government or a lack of liquidity in certain securities. Moreover, the Fund may be delayed in purchasing or selling securities and other instruments included in the Index. Any issues the Fund encounters with regard to currency convertibility (including the cost of borrowing funds, if any) and repatriation may also increase the Fund’s tracking error.

U.S. Government Obligations Risk. The Fund may invest in securities issued by the U.S. government. The total public debt of the United States as a percentage of gross domestic product has grown rapidly since the beginning of the 2008–2009 financial downturn. Although high debt levels do not necessarily indicate or cause economic problems, they may create certain systemic risks if sound debt management practices are not implemented. A high national debt can raise concerns that the U.S. government will not be able to make principal or interest payments when they are due. This increase has also necessitated the need for the U.S. Congress to negotiate adjustments to the statutory debt limit to increase the cap on the amount the U.S. government is permitted to borrow to meet its existing obligations and finance current budget deficits. In August 2011, S&P lowered its long term sovereign credit rating on the U.S. In explaining the downgrade at that time, S&P cited,

Additional Information About the Funds

among other reasons, controversy over raising the statutory debt limit and growth in public spending. Any controversy or ongoing uncertainty regarding the statutory debt ceiling negotiations may impact the U.S. long-term sovereign credit rating and may cause market uncertainty. As a result, market prices and yields of securities supported by the full faith and credit of the U.S. government may be adversely affected.

Utilities Sector Risk. Companies in the utilities industry may have difficulty obtaining an adequate return on invested capital, raising capital, and financing large construction programs during periods of inflation or unsettled capital markets; face restrictions on operations and increased cost and delays attributable to environmental considerations and regulation; find that existing plants, equipment or products have been rendered obsolete by technological innovations; and be subject to increased costs because of the scarcity of certain fuels or the effects of man-made disasters. Deregulation is subjecting utility companies to greater competition and may adversely affect profitability. As deregulation allows utility companies to diversify outside of their original geographic regions and their traditional lines of business, utility companies may engage in riskier ventures. Government regulators monitor and control utility operations, revenues and costs, and therefore may limit utility profits. Regulatory authorities may also restrict utility companies' access to new markets, thereby diminishing these companies' long-term prospects. Energy conservation and changes in climate policy may have a significant adverse impact on the revenues and expenses of utility companies.

Valuation Risk. Financial information about the Fund's portfolio holdings may not always be reliable, which may make it difficult to obtain a current price for the investments held by the Fund. Independent market quotations for such investments may not be readily available and securities may be fair valued or valued by a pricing service at an evaluated price. These valuations are subjective and different funds may assign different fair values to the same investment. Such valuations also may be different from what would be produced if the security had been valued using market quotations. As a result, there is a risk that the Fund may not be able to sell an investment at the price assigned to the investment by the Fund. Additionally, Fund securities that are valued using techniques other than market quotations, including "fair valued" securities, may be subject to greater fluctuations in their value from one day to the next. Because securities in which the Fund invests may trade on days when the Fund does not price its shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's shares.

Management

Investment Adviser

Krane Funds Advisors, LLC (“Krane” or “Adviser”), which is a UN PRI signatory¹, is a registered investment adviser located at 280 Park Avenue, 32nd Floor, New York, NY 10017 and serves as investment adviser of the Fund. Krane has served as the investment adviser of the Fund since its inception.

Under the Investment Advisory Agreement between the Trust and Krane, Krane is responsible for reviewing, supervising and administering the Fund’s investment program and the general management and administration of the Trust. In this regard, among other things, Krane arranges for transfer agency, custody, fund administration and accounting, and other non-distribution related services necessary for the Fund to operate. Krane may engage a subadviser to assist it in managing the Fund’s investments, but will be responsible for overseeing any subadvisers. Krane manages the Fund’s business affairs, provides office facilities and equipment and certain clerical, bookkeeping and administrative services, and permits its officers and employees to serve as officers or Trustees of the Trust. Under the Investment Advisory Agreement, Krane bears all of its own costs associated with providing advisory services to the Fund. In addition, Krane has contractually agreed to pay all operating expenses of the Fund, except (i) interest and taxes (including, but not limited to, income, excise, transaction, transfer and withholding taxes); (ii) expenses of the Fund incurred with respect to the acquisition and disposition of portfolio securities and the execution of portfolio transactions, including brokerage commissions and short sale dividend or interest expense; (iii) expenses incurred in connection with any distribution plan adopted by the Trust in compliance with Rule 12b-1 under the 1940 Act, including distribution fees; (iv) Acquired Fund Fees and Expenses; (v) litigation expenses; (vi) the compensation payable to the Adviser under the investment advisory agreement; (vii) compensation and expenses of the Independent Trustees (including any Trustees’ counsel fees); and (viii) any expenses determined to be extraordinary expenses by the Board. Nevertheless, there exists a risk that a Trust service provider will seek recourse against the Trust if is not timely paid by Krane for the fees and expenses for which it is responsible, which could materially adversely affect the Fund.

Under the Investment Advisory Agreement, the Fund will pay Krane the fee shown in the table below (in addition to the securities lending compensation Krane receives under the Agreement discussed below), which is calculated daily and paid monthly, at an annual rate based on a percentage of the average daily net assets of the Fund.

Fund	Advisory Fee
KraneShares Global Carbon Transformation ETF	0.88%
KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF.	0.78%
KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)	0.78%
KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)	0.78%
KraneShares Eastern US Carbon Strategy ETF.	0.78%

¹ UN PRI is an abbreviation for ‘United Nations Principles for Responsible Investment,’ a UN-supported network of investors that works to promote sustainable investment through the incorporation of environmental, social and governance factors into investment decision-making. PRI signatories publicly commit to adopt and implement the network’s six ESG principles, which are voluntary and aspirational, where consistent with their fiduciary duties.

Management

For the fiscal year or period, as applicable, ended March 31, 2022, the Adviser received the fees (in addition to the securities lending compensation Krane receives under the Agreement discussed below), as a percentage of average daily net assets of each operational Fund, as set forth below, which is net of any fees waiver or expenses reimbursed:

Fund	Advisory Fee
KraneShares Global Carbon Transformation ETF	0.88%
KraneShares Global Carbon Strategy ETF (formerly, KraneShares Global Carbon ETF	0.78%
KraneShares European Carbon Allowance Strategy ETF (formerly, KraneShares European Carbon Allowance ETF)	0.78%
KraneShares California Carbon Allowance Strategy ETF (formerly, KraneShares California Carbon Allowance ETF)	0.78%

In addition to the above-described services, to the extent the Fund engages in securities lending, Krane will: (i) determine which securities are available for loan and notify the securities lending agent for the Fund (the “Agent”), (ii) monitor the Agent’s activities to ensure that securities loans are effected in accordance with Krane’s instructions and in accordance with applicable procedures and guidelines adopted by the Board, (iii) make recommendations to the Board regarding the Fund’s participation in securities lending; (iv) prepare appropriate periodic reports for, and seek appropriate periodic approvals from, the Board with respect to securities lending activities; (v) respond to Agent inquiries concerning Agent’s activities; and (vi) such other related duties as Krane deems necessary or appropriate.

Under the agreement, while the fees and expenses related to the Fund’s securities lending-related activities reduce the revenues and income of the Fund from such activities, they are not fees and expenses for which Krane is responsible. Further, as compensation for the services provided by Krane in connection with any securities lending-related activities, the Fund pays Krane 10% of the monthly investment income received from the investment of cash collateral and loan fees received from borrowers in respect of securities loans (net of any amounts paid to the custodian and/or securities lending agent or rebated to borrowers). For the fiscal year/period ended March 31, 2022, Krane did not receive any revenue from the Funds related to securities lending activities.

The Investment Advisory Agreement has been approved by the Board of Trustees and shareholders of the Fund (in this regard, Krane as the sole initial shareholder of the Fund will approve various matters and agreements, including the Investment Advisory Agreement for the Fund prior to its public offering). A discussion regarding the basis for the Board’s approval of the Fund’s investment advisory agreement with Krane on behalf of the Funds (except KraneShares Global Carbon Strategy ETF and KraneShares Eastern US Carbon Strategy ETF) is available in the Funds’ Annual Report to Shareholders dated March 31, 2022. A discussion regarding the basis for the Board’s approval of the KraneShares Global Carbon Strategy ETF investment advisory agreement with Krane is available in the Fund’s Semi-Annual Report to Shareholders dated September 31, 2021. A discussion regarding the basis for the Board’s approval of KraneShares Eastern US Carbon Strategy ETF investment advisory agreement with Krane will be available in the Fund’s first Annual or Semi-Annual Report to Shareholders.

China International Capital Corporation (USA) Holdings Inc., a wholly-owned, indirect subsidiary of China International Capital Corporation Limited owns a majority stake in Krane. As of March 31, 2022, Central Huijin Investment Limited, a mainland Chinese-domiciled entity, and HKSCC Nominees Limited, held approximately 40.11% and 39.42%, respectively, of the shares of China International Capital Corporation Limited. Central Huijin Investment Limited is a wholly-owned subsidiary of China

Management

Investment Corporation, which is a mainland Chinese sovereign wealth fund. KFA One Holdings, LLC, located at 280 Park Avenue, 32nd Floor, New York, New York 10017, holds the remaining equity interests in Krane and Jonathan Krane, through his equity interests in KFA One Holdings, LLC, beneficially owns more than 10% of the equity interests in Krane.

Investment Sub-Adviser

Climate Finance Partners LLC (“CFP” or “Sub-Adviser”) serves as Sub-Adviser to KraneShares Global Carbon Strategy ETF, KraneShares European Carbon Allowance Strategy ETF, KraneShares California Carbon Allowance Strategy ETF and KraneShares Eastern US Carbon Strategy ETF. CFP will provide non-discretionary sub-advisory services to the Fund, which includes advice, research and subject matter expertise related to the Fund’s investments. For the services it will provide, Krane will pay CFP a fee equal to thirty-two percent (32%) of the Net Revenue received by the Krane from the Fund. Net Revenue is defined for these purposes as gross revenue under Schedule A of the Advisory Agreement minus gross fund-related expenses (including any waiver by the Adviser of its compensation under the Advisory Agreement and any reimbursements by the Adviser of the Fund’s expenses).

Krane has received “manager of managers” exemptive relief from the SEC that permits Krane, subject to the approval of the Board of Trustees, to appoint a “wholly-owned” or unaffiliated sub-adviser, as defined in the exemptive relief, or to change the terms of a sub-advisory agreement with a “wholly-owned” or unaffiliated sub-adviser without first obtaining shareholder approval. The exemptive order further permits Krane to add or to change a “wholly-owned” or unaffiliated sub-adviser or to change the fees paid to such parties from time to time without the expense and delays associated with obtaining shareholder approval of the change and to disclose sub-advisers’ fees only in the aggregate in its registration statement. Any increase in the aggregate advisory fee paid by the Fund remains subject to shareholder approval. Krane continues to have ultimate responsibility (subject to oversight by the Board of Trustees) to oversee the sub-advisers and recommend their hiring, termination, and replacement. The Fund will notify shareholders of any change of the Fund sub-adviser.

Portfolio Managers

KraneShares Global Carbon Transformation ETF

Roger Mortimer, Portfolio Manager at the Adviser, has served as a portfolio manager of the Fund since its inception. He joined the Adviser in 2022 and has over 20 years of experience in the financial services industry. He was previously an advisor on corporate strategy within the decarbonization universe and has followed climate related investment themes for more than 20 years. Previously, he was a Senior Vice President of CI Global Investments (2013-2019); Managing Partner and Chief Investment Officer of Parador Asset Management LLC (2009-2013); Vice President of Capital Guardian Trust Company (2005-2009); and a Senior Vice President of AIM Funds and a Global Partner of AMVESCAP Plc (1997-2005). He has a bachelor’s degree in economics from Huron College, the University of Western Ontario, and an MBA from the Ivey Business School at the University of Western Ontario.

Luke Oliver, Managing Director and Head of Strategy at the Adviser, has served as a portfolio manager of the Fund since its inception. He joined the Adviser in 2021 and has over 20 years of experience in the financial services industry. Previously, he oversaw the U.S. ETF business at DWS (formally Deutsche Asset Management) as Managing Director, Head of Index Investing from 2019-2021, and as Head of Capital Markets from 2013-2019 and one of the co-founders of the business. From 2009-2013 he was Director, Portfolio Manager for the DB PowerShares suite of commodity ETFs. Prior to that, at Deutsche Bank, he was Head of Transaction Management for Deutsche US FX Business.

Management

Additional information about the Portfolio Managers' compensation, other accounts managed by the Portfolio Managers and the Portfolio Managers' ownership of Fund shares is available in the SAI.

KraneShares Global Carbon Strategy ETF, KraneShares European Carbon Allowance Strategy ETF, KraneShares California Carbon Allowance Strategy ETF and KraneShares Eastern US Carbon ETF

James Maund, Head of Capital Markets at the Adviser, has served as the lead portfolio manager of the Fund since its inception. He joined the Adviser in 2020 and has over 15 years of experience in the investment management industry. Previously, he was a Vice President in the Institutional ETF Group and a member of the ETF Capital Markets Group at State Street Global Advisors (2010-2019); and an ETF trader at Goldman Sachs & Co (2005-2009). Mr. Maund graduated with a bachelor's degree in economics from Wesleyan University.

Luke Oliver, Managing Director and Head of Strategy at the Adviser, has served as a portfolio manager of the Fund since August 2022. He joined the Adviser in 2021 and has over 20 years of experience in the financial services industry. Previously, he oversaw the U.S. ETF business at DWS (formally Deutsche Asset Management) as Managing Director, Head of Index Investing from 2019-2021, and as Head of Capital Markets from 2013-2019 and one of the co-founders of the business. From 2009-2013 he was Director, Portfolio Manager for the DB PowerShares suite of commodity ETFs. Prior to that, at Deutsche Bank, he was Head of Transaction Management for Deutsche US FX Business.

Jonathan Shelon, Chief Operating Officer at Krane, also serves as a portfolio manager of the Fund and supports Mr. Maund and Krane's investment team with respect to the Fund. Mr. Shelon has been a portfolio manager of the Fund since the Fund's inception. Mr. Shelon joined Krane in 2015 as a Managing Partner. Mr. Shelon has spent the majority of his career managing investment portfolios and diverse teams at leading asset management organizations. Prior to joining Krane, he was the Chief Investment Officer of a 40-person global Specialized Strategies Team at J.P. Morgan with \$40 billion AUM. Prior to joining J.P. Morgan, Mr. Shelon spent ten years as a portfolio manager at Fidelity Investments where he was responsible for the investment performance, process and evolution of their target-date strategies for retirement savings, college savings and income generation.

Additional information about the Portfolio Managers' compensation, other accounts managed by the Portfolio Managers and the Portfolio Managers' ownership of Fund shares is available in the SAI.

Other Service Providers

SEI Investments Global Funds Services ("Administrator") serves as administrator for the Funds. The Administrator provides necessary administrative and accounting services for the maintenance and operations of the Trust and the Funds, and makes available the office space, equipment, personnel and facilities required to provide such services.

SEI Investments Distribution Co. ("Distributor"), an affiliate of the Administrator, serves as the Funds' distributor. Shares in less than Creation Units are not distributed by the Distributor, and the Distributor does not maintain a secondary market in the shares of a Fund.

Brown Brothers Harriman & Co. ("BBH") serves as custodian and transfer agent for the Funds. BBH maintains in separate accounts cash, securities and other assets of a Fund, keeps all necessary accounts and records, and provides other services. BBH also serves as the custodian for each Subsidiary.

Shareholder Information

Calculating NAV

Each Fund calculates its NAV by:

- Taking the current market value of its total assets
- Subtracting any liabilities and withholdings (if any)
- Dividing that amount by the total number of shares owned by the shareholders

Each Fund normally calculates NAV as of the regularly scheduled close of normal trading on each day that the NYSE is scheduled to be open for business (a “Business Day”) (normally, 4:00 p.m., Eastern time). Any assets or liabilities denominated in currencies other than the U.S. dollar are converted into U.S. dollars at the current market rates on the date of valuation as quoted by one or more sources.

Securities listed on a securities exchange (i.e. exchange-traded equity securities), market or automated quotation system for which quotations are readily available (except for securities traded on NASDAQ), including securities traded over the counter, are valued by a Fund’s independent pricing agents at the last reported sale price on the primary exchange or market (foreign or domestic) on which they are traded (or at the time as of which the Fund’s NAV is calculated if a security’s exchange is normally open at that time). If there is no such reported sale, such securities are valued at the most recently reported bid price. For securities traded on NASDAQ, the NASDAQ Official Closing Price will be used. If a security price cannot be obtained from an independent, third-party pricing agent, the Funds seek to obtain bid and ask prices from two broker-dealers who make a market in the portfolio instrument and determines the average of the two.

If available, debt securities are priced based upon valuations provided by independent third-party pricing agents. Such values generally reflect the last reported sales price if the security is actively traded. The third-party pricing agents may also value debt securities at an evaluated bid price by employing methodologies that utilize actual market transactions, broker-supplied valuations, or other methodologies designed to identify the market value for such securities. Debt obligations with remaining maturities of sixty days or less may be valued at their amortized cost, which approximates market value.

The prices for foreign securities are reported in local currency and converted to U.S. dollars using currency exchange rates. The exchange rates used for valuation are captured as of the close of the London Stock Exchange each day normally at 4:00 p.m. Greenwich Mean Time.

The value of a swap contract is equal to the obligation (or rights) under the swap contract, which will generally be equal to the net amounts to be paid or received under the contract based upon the relative values of the positions held by each party to the contract as determined by the applicable independent, third party pricing agent. Exchange-traded options are valued at the last reported sales price on the exchange on which they are listed. If there is no such reported sale on the valuation date, long positions are valued at the most recent bid price, and short positions are valued at the most recent ask price. Over-the-counter (“OTC”) options are valued based upon prices determined by the applicable independent, third party pricing agent. Futures are valued at the settlement price established by the board of trade on which they are traded. Foreign currency forward contracts are valued at the current day’s interpolated foreign exchange rate, as calculated using the current day’s spot rate and the 30-, 60-, 90- and 180-day forward rates provided by an independent pricing agent.

Shareholder Information

Investments in open-end investment companies that do not trade on an exchange are valued at the end of day NAV per share. Investments in open-end investment companies that trade on an exchange are valued in the same manner as other exchange-traded equity securities (described above).

Securities for which market prices are not “readily available,” or are not deemed to reflect current market values, or are debt securities where no evaluated price is available from the Trust’s third-party pricing agents pursuant to established methodologies, are fair valued in accordance with the Trust’s valuation policies and procedures approved by the Board of Trustees. Some of the more common reasons that may necessitate that a security be valued using “fair value” pricing may include, but are not limited to: the security’s trading has been halted or suspended; the security’s primary trading market is temporarily closed; or the security has not been traded for an extended period of time.

In addition, a Fund may fair value its securities if an event that may materially affect the value of the Fund’s securities that trade outside of the United States (a “Significant Event”) has occurred between the time of the security’s last close and the time that the Fund calculates its NAV. A Significant Event may relate to a single issuer or to an entire market sector, country or region. Events that may be Significant Events may include: government actions, natural disasters, armed conflict, acts of terrorism and significant market fluctuations. If Krane becomes aware of a Significant Event that has occurred with respect to a portfolio instrument or group of portfolio instruments after the closing of the exchange or market on which the portfolio instrument or portfolio instruments principally trade, but before the time at which the Fund calculates its NAV, it will notify the Administrator and may request that an ad hoc meeting of the Fair Valuation Committee be called.

With respect to trade-halted securities, the Trust typically will fair value a trade-halted security by adjusting the security’s last market close price by the security’s sector performance, as measured by a predetermined index, unless Krane recommends and the Trust’s Fair Valuation Committee determines to make additional adjustments. Certain foreign securities exchanges have mechanisms in place that confine one day’s price movement in an individual security to a pre-determined price range (the “Exchange Range”) based on that day’s opening price (“Collared Securities”). Fair value determinations for such Collared Securities will generally be capped based on the Exchange Range relevant to that security.

Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security is materially different than the value that could actually be realized upon the sale of the security or that another fund that uses market quotations or its own fair value procedures to price the same securities.

Trading in securities on many foreign exchanges is normally completed before the close of business on each Business Day. In addition, securities trading in a particular country or countries may not take place on each Business Day or may take place on days that are not Business Days. Changes in valuations on certain securities may occur at times or on days on which a Fund’s NAV is not calculated and on which Fund shares do not trade and sales and redemptions of shares do not occur. As a result, the value of a Fund’s portfolio securities and the net asset value of its shares may change on days when share purchases or sales cannot occur.

Buying and Selling Fund Shares

Shares of a Fund may be purchased or redeemed directly from a Fund only in Creation Units or multiples thereof. Only a broker-dealer (“Authorized Participant”) that enters into an Authorized Participant Agreement with the Fund’s distributor, SEI Investments Distribution Co. (the “Distributor”),

Shareholder Information

may engage in creation and redemption transactions directly with the Fund. Purchases and redemptions directly with a Fund must follow the Fund's procedures, and are subject to transaction fees, which are described in the SAI. Orders for such transactions may be rejected or delayed if they are not submitted in good order and subject to the other conditions set forth in this prospectus and the SAI. Please see the SAI for more information about purchases and redemptions of Creation Units.

Once purchased (i.e., created) by an Authorized Participant, shares are listed on the Exchange and trade in the secondary market. When you buy or sell a Fund's shares in the secondary market, you will pay or receive the market price. The price at which you buy or sell Shares (i.e., the market price) may be more or less than the NAV of the Shares. Unless imposed by your broker, there is no minimum dollar amount you must invest in the Fund and no minimum number of Shares you must buy. Shares can be bought and sold throughout the trading day like other publicly traded securities. Most investors will buy and sell shares through a broker and, thus, will incur customary brokerage commissions and charges when buying or selling shares. **Except when aggregated in Creation Units, Shares are not redeemable by the Fund.**

The secondary markets are closed on weekends and also are generally closed on the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth, Independence Day, Labor Day, Columbus Day, Veterans' Day, Thanksgiving Day, and Christmas Day.

For more information on how to buy and sell shares of the Funds, call 1.855.857.2638 or visit www.kraneshares.com.

Premium/Discount Information

Information showing the number of days the market price of the Fund's shares was greater than the Fund's NAV per share (i.e., at a premium) and the number of days it was less than the Fund's NAV per share (i.e., at a discount) for various time periods will be available by visiting the Fund's website at www.kraneshares.com. The premium and discount information contained on the website will represent past performance and cannot be used to predict future results.

Portfolio Holdings Information

A description of the Fund's policies and procedures with respect to the disclosure of Fund portfolio holdings is available in the Fund's Statement of Additional Information ("SAI"). The holdings of a Fund can be found on the Fund's website at www.kraneshares.com.

Active Investors and Market Timing

The Trust's Board of Trustees has determined not to adopt policies and procedures designed to prevent or monitor for frequent purchases and redemptions of the Fund's shares because the Fund sells and redeems its shares at NAV only in Creation Units pursuant to the terms of an Authorized Participant Agreement between the Authorized Participant and the Distributor, and such direct trading between the Fund and Authorized Participants is critical to ensuring that the Fund's shares trade at or close to NAV. Further, the vast majority of trading in Fund shares occurs on the secondary market, which does not involve the Fund directly and therefore does not cause the Fund to experience many of the harmful effects of market timing, such as dilution and disruption of portfolio management. In addition, the Fund imposes a transaction fee on Creation Unit transactions, which is designed to offset transfer and other transaction costs incurred by the Fund in connection with the issuance and

Shareholder Information

redemption of Creation Units and may employ fair valuation pricing to minimize potential dilution from market timing. The Fund reserves the right to reject any purchase order at any time and reserves the right to impose restrictions on disruptive, excessive, or short-term trading.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including shares of a Fund. Registered investment companies are permitted to invest in a Fund beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in SEC exemptive relief, including that such investment companies enter into an agreement with a Fund. Each Fund currently intends to limit its investments in other investment companies as required by Section 12(d)(1) and the conditions set forth in SEC exemptive relief so that other investment companies will be permitted to invest in a Fund beyond the limits set forth in Section 12(d)(1) if they comply with the conditions set forth in SEC exemptive relief. This policy is subject to change.

Continuous Offering

The method by which Creation Units of Fund shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of shares are issued and sold by the Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act, may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent shares and sells the shares directly to customers or if it chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary market demand for shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in shares, whether or not participating in the distribution of shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the shares that are part of an overallotment within the meaning of Section 4(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

Dealers effecting transactions in a Fund’s shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Shareholder Information

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of a Fund through a broker-dealer or other financial intermediary (such as a bank), Krane or an affiliate may pay the intermediary for marketing activities or other services related to the sale or promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other financial intermediary and your salesperson to recommend a Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Distribution Plan

Each Fund has adopted a Distribution Plan (the "Plan") that allows the Fund to pay distribution fees to the Distributor and other firms that provide distribution services ("Service Providers"). Under the Plan, if a Service Provider provides distribution services, the Fund would pay distribution fees to the Distributor at an annual rate not to exceed 0.25% of average daily net assets, pursuant to Rule 12b-1 under the 1940 Act. The Distributor would, in turn, pay the Service Provider out of its fees. The Board of Trustees currently has determined not to implement any 12b-1 fees pursuant to the Plan. 12b-1 fees may only be imposed after approval by the Board of Trustees. Because any distribution fees would be paid out of the Fund's assets on an on-going basis, if payments are made in the future, the distribution fees would increase the cost of your investment and may cost you more than paying other types of sales charges.

Householding Policy

To reduce expenses, we mail only one copy of the prospectus or summary prospectus, each annual and semi-annual report, and any proxy statements to each address shared by two or more accounts with the same last name or that the Trust reasonably believes are members of the same family. If you wish to receive individual copies of these documents, please call the Trust at 1.855.857.2638 between the hours of 8:30 a.m. and 6:00 p.m. Eastern Time on days a Fund is open for business or contact your financial institution. We will begin sending you individual copies thirty days after receiving your request.

Investors who hold their shares through an intermediary are subject to the intermediary's policies. Contact your financial intermediary for any questions you may have.

Dividends and Distributions

KraneShares Global Carbon Transformation ETF pays out to its shareholders any net investment income and net realized capital gains once a year (usually in December). KraneShares Global Carbon Strategy ETF, KraneShares European Carbon Allowance Strategy ETF, KraneShares California Carbon Allowance Strategy ETF, and KraneShares Eastern US Carbon ETF intend to pay out any net investment income and net realized capital gains quarterly. Each Fund may make distributions on a more frequent basis. Each Fund reserves the right to declare special distributions, including if, in its reasonable discretion, such action is necessary or advisable to preserve the status of the Fund as a regulated investment company under Subchapter M of the Code, to avoid imposition of income or excise taxes on undistributed income.

Additional Tax Information

The following is a summary of some important tax issues that affect each Fund and its shareholders. The summary is based on current tax laws, which may be changed by legislative, judicial or administrative action. You should not consider this summary to be a detailed explanation of the tax treatment of a Fund, or the tax consequences of an investment in a Fund.

More information about taxes is located in the SAI. You are urged to consult your tax adviser regarding specific questions as to federal, state and local income taxes.

Tax Status of each Fund

Each Fund is treated as a separate entity for federal tax purposes, and intends to qualify for the special tax treatment afforded to regulated investment companies. As long as a Fund qualifies for treatment as a regulated investment company, it pays no federal income tax on the earnings it distributes to shareholders.

Tax Status of Distributions

Each Fund will, at least annually, distribute substantially all of its net investment taxable income and net capital gains income.

The income dividends you receive from a Fund (which include the Fund's short-term capital gains) will be taxed as either ordinary income or qualified dividend income. For non-corporate shareholders, dividends that are reported as qualified dividend income are generally taxable at reduced maximum tax rates to the extent that the Fund receives qualified dividend income and subject to certain limitations and holding period requirements. Most of the Funds, due to their focus on investing in futures contracts, do not expect to pay significant dividends that are qualified dividend income.

Distributions of a Fund's short-term capital gains are generally taxable as ordinary income. Any distributions of net capital gain (the excess of a Fund's net long-term capital gains over its net short-term capital losses) are taxable as long-term capital gains regardless of how long you have owned your shares. Long-term capital gains are taxable at reduced maximum tax rates.

If a Fund makes distributions to a shareholder in excess of the Fund's current and accumulated earnings and profits in any taxable year, the excess distribution will be treated as a return of capital to the extent of the shareholder's tax basis in its shares, and thereafter as capital gain. A return of capital is not taxable, but reduces a shareholder's tax basis in its shares, thus reducing any loss or increasing any gain on a subsequent taxable disposition by the shareholder of its shares.

Each Fund may invest in complex securities. These investments may be subject to numerous special and complex rules. These rules could affect whether gains and losses recognized by a Fund are treated as ordinary income or capital gain, accelerate the recognition of income to the Fund and/or defer the Fund's ability to recognize losses. In turn, these rules may affect the amount, timing or character of distributions you receive from a Fund.

Dividends and distributions are generally taxable to you whether you receive them in cash or in additional shares. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive that is attributable to dividends received by the Fund from U.S. corporations, subject to certain limitations.

Additional Tax Information

Distributions paid in January but declared by a Fund in October, November or December of the previous year may be taxable to you in the previous year. Your broker will inform you of the amount of your ordinary income dividends, qualified dividend income, and capital gains distributions shortly after the close of each calendar year.

If you lend your Fund shares pursuant to securities lending arrangements, you may lose the ability to treat the Fund's dividends (paid while the shares are held by the borrower) as qualified dividend income. Consult your financial intermediary or tax adviser.

Some foreign governments levy withholding taxes against dividend and interest income. Although in some countries a portion of these withholding taxes is recoverable, the non-recovered portion will reduce the income received from the securities in a Fund. If more than 50% of the total assets of a Fund at the close of a year consist of non-U.S. stocks or securities, then the Fund may elect, for U.S. federal income tax purposes, to treat certain non-U.S. income taxes (including withholding taxes) paid by the Fund as paid by its shareholders. The Fund will provide you with the information necessary to reflect foreign taxes paid on your income tax return if it makes this election.

If you hold your shares in a tax-qualified retirement account, you generally will not be subject to federal taxation on income received with respect to the shares (including Fund dividends and distributions, and any gain on the sale of shares), until you begin receiving payments from your retirement account. You should consult your tax adviser regarding the tax rules that apply to your retirement account.

Tax Status of Share Transactions

Any capital gain or loss upon a sale of a Fund's shares is generally treated as a long-term gain or loss if the shares have been held for more than one year and as a short-term gain or loss if held for one year or less. Any capital loss on the sale of a Fund's shares held for six months or less is treated as a long-term capital loss to the extent that any capital gain distributions were paid with respect to such shares.

Medicare Contribution Tax

U.S. individuals with income exceeding \$200,000 (\$250,000 if married and filing jointly) are subject to a 3.8% Medicare contribution tax on all or a portion of their "net investment income," including interest, dividends, and certain capital gains (including capital gains realized on the sale or exchange of shares of a Fund). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

Back-Up Withholding

A Fund will be required in certain cases to withhold at applicable withholding rates (currently 24%) and remit to the U.S. Treasury the amount withheld on amounts payable to any shareholder who (1) has provided the Fund either an incorrect tax identification number or no number at all, (2) is subject to back-up withholding by the Internal Revenue Service ("IRS") for failure to properly report payments of interest or dividends, (3) has failed to certify to the Fund that such shareholder is not subject to back-up withholding, or (4) has not certified that such shareholder is a U.S. person (including a U.S. resident alien).

Additional Tax Information

Non-U.S. Investors

If you are not a citizen or permanent resident of the United States or if you are a non-U.S. entity, a Fund's ordinary income dividends (which include distributions of net short-term capital gains, unless the Fund designates such distributions as short-term capital gain dividends) will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies, provided that withholding tax will generally not apply to any gain or income realized by a non-U.S. shareholder in respect of any distributions of long-term capital gains or upon the sale or other disposition of shares of the Fund (or dividends designated as interest-related dividends or short-term capital gain dividends). You also may potentially be subject to U.S. federal estate taxes.

A 30% withholding tax will generally be imposed on dividends paid by a Fund to (i) foreign financial institutions including non-U.S. investment funds unless they agree to collect and disclose to the IRS, or the tax authorities in their home jurisdictions, information regarding their direct and indirect U.S. account holders and (ii) certain other foreign entities, unless they certify certain information regarding their direct and indirect U.S. owners. A non-U.S. shareholder may be exempt from the withholding described in this paragraph under an intergovernmental agreement between the United States and a foreign government, provided that the shareholder and the applicable foreign government comply with the terms of such agreement. Proposed regulations (which are effective while pending) eliminate the application of the Foreign Account Tax Compliance Act ("FATCA") withholding tax to capital gain dividends and redemption proceeds that was scheduled to take effect in 2019.

State Tax Considerations

In addition to federal taxes, distributions by a Fund and ownership of a Fund's shares may be subject to state and local taxes. You should consult your tax adviser regarding how state and local tax laws affect your investment in the Fund's shares.

Taxes on Creations and Redemptions of Creation Units

A person who purchases a Creation Unit by exchanging securities in-kind generally will recognize a gain or loss equal to the difference between (i) the sum of the market value of the Creation Units at the time of the exchange and any net amount of cash received by the Authorized Participant in the exchange and (ii) the sum of the purchaser's aggregate basis in the securities surrendered and any net amount of cash paid for the Creation Units. A person who redeems Creation Units and receives securities in-kind from a Fund will generally recognize a gain or loss equal to the difference between the redeemer's basis in the Creation Units, and the aggregate market value of the securities received and any net cash received. The IRS, however, may assert that a loss realized upon an in-kind exchange of securities for Creation Units or an exchange of Creation Units for securities cannot be deducted currently under the rules governing "wash sales," or on the basis that there has been no significant change in economic position. Persons effecting in-kind creations or redemptions should consult their own tax adviser with respect to these matters.

Each Fund has the right to reject an order for Creation Units if the purchaser (or a group of purchasers) would, upon obtaining the shares so ordered, own 80% or more of the outstanding shares of the Fund and if, pursuant to section 351 of the Code, the Fund would have a basis in the deposit securities different from the market value of such securities on the date of deposit. The Fund also has the right to require information necessary to determine beneficial share ownership for purposes of the 80% determinations.

IHS Markit does not represent or warrant that the Index, its components and any information related thereto (“Content”) will be error-free, that any defects will be corrected, or that use of the Content will provide specific results. The Content is delivered on an “as-is” and “as-available” basis. All Content provided is subject to change without notice. The entire risk as to the accuracy and completeness of all Content is with an investor. Neither IHS Markit nor any data provider makes any warranty, express or implied, as to the accuracy, timeliness or completeness of the Content, or as to the results to be attained by you or others from your use of the Content. There are no express or implied warranties of title, merchantability or fitness for a particular purpose or use, and there is no warranty, guaranty or representation made by IHS Markit or any data provider.

The Content may contain certain statements, estimates and financial and operating information (“Estimates”) that constitute forward-looking statements or information. Forward-looking statements or information may be identified by using the words “targets”, “believes”, “estimates”, “expects”, “aims”, “intends”, “will”, “can”, “may”, “anticipates”, “would”, “should”, “could” and similar expressions in such statements or the negative thereof. These forward-looking statements or information involve known and unknown risks and uncertainties that could cause actual outcomes and results to be materially different from the Estimates or results implied or expressed in such forward-looking statements. While in some cases presented with numerical specificity, the Estimates are based upon (i) certain assumptions that are inherently subject to significant business, economic, regulatory, environmental, seasonal, competitive uncertainties, contingencies and risks and (ii) assumptions with respect to future business decisions that are subject to change. For more information concerning the risks IHS Markit faces, visitors to this website should refer to the “Risk Factors” contained in IHS Markit’s filings with the United States Securities and Exchange Commission

There can be no assurance that the Estimates or the underlying assumptions will be realized and that actual results of operations or future events will not be materially different from the Estimates. Under no circumstances should the inclusion of the Estimates be regarded as a representation, undertaking, warranty or prediction by IHS Markit, or any other person with respect to the accuracy thereof or the accuracy of the underlying assumptions, or that IHS Markit will achieve or is likely to achieve any particular results. IHS Markit disclaims any intent or obligation to update publicly or to revise any of the Estimates, whether as a result of new information, future events or otherwise, except as required by law. Forward-looking statements or information are not guarantees of future performance and, accordingly, one should not put reliance on forward-looking statements or information due to the inherent uncertainty therein. Except as required by law, IHS Markit undertakes no obligation to publicly release any update or revisions to these forward-looking statements to reflect events or circumstances after their time of publication.

Neither IHS Markit nor any data provider shall in any way be liable to any third party for any inaccuracies, errors or omissions (regardless of cause) in the Content, or for any damages (whether direct or indirect) resulting therefrom. Without limiting the foregoing, neither IHS Markit nor any data provider shall have any liability whatsoever, whether in contract (including under an indemnity), in tort (including negligence), under a warranty, under statute or otherwise, in respect of any loss or damage suffered as a result of or in connection with any opinions, recommendations, forecasts, judgments, or any other conclusions, or any course of action determined, by a third party, whether or not based on the Content contained herein.

Index Provider Disclaimers

The sole remedy against IHS Markit for dissatisfaction with the Content is to stop using the Content. This disclaimer applies to any damages or liabilities caused by any failure of performance, error, omission, interruption, deletion, defect, delay in operation or transmission, computer virus, communication line failure, theft or destruction of or unauthorized access to, alteration of, or use, whether for breach of contract, tort, negligence or any other cause of action.

More information about the Index Provider is located in the SAI.

Additional Disclaimers

Krane and Trust Disclaimer

Neither Krane nor the Trust guarantees the accuracy or the completeness of any index or any data included therein and neither shall have any liability for any errors, omissions or interruptions therein. Krane and the Fund further make no representation or warranty, express or implied, to the owners of shares of the Fund or any members of the public as to results to be obtained by the Fund from the use of any index, as to any data included therein, or as to the advisability of investing in securities generally or in the Fund particularly. Krane expressly disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to any index or Fund. Without limiting any of the foregoing, in no event shall Krane have any liability for any special, punitive, direct, indirect or consequential damages (including lost profits), even if notified of the possibility of such damages.

NYSE Arca, Inc. Disclaimer

Shares of the Fund are not sponsored, endorsed or promoted by NYSE Arca, Inc. ("NYSE Arca"). NYSE Arca makes no representation or warranty, express or implied, to the owners of the shares of the Fund or any member of the public regarding the ability of the Fund to track the total return performance of an index, if any, or the ability of an index, if any, to track stock market performance. NYSE Arca is not responsible for, nor has it participated in, the determination of the compilation or the calculation of any index, nor in the determination of the timing of, prices of, or quantities of shares of the Fund to be issued, nor in the determination or calculation of the equation by which the shares are redeemable. NYSE Arca has no obligation or liability to owners of the shares of the Fund in connection with the administration, marketing or trading of the shares of the Fund.

NYSE Arca does not guarantee the accuracy and/or the completeness of any index or any data included therein. NYSE Arca makes no warranty, express or implied, as to results to be obtained by the Trust on behalf of the Fund as licensee, licensee's customers and counterparties, owners of the shares of the Fund, or any other person or entity from the use of any subject index or any data included therein in connection with the rights licensed as described herein or for any other use. NYSE Arca makes no express or implied warranties and hereby expressly disclaims all warranties of merchantability or fitness for a particular purpose with respect to any index or any data included therein. Without limiting any of the foregoing, in no event shall NYSE Arca have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Financial Highlights

The table that follows presents the financial highlights for each Fund that was operational as of the fiscal year ended March 31, 2022. The table is intended to help you understand each Fund's financial performance. Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost, on an investment in the Fund (assuming reinvestment of all dividends and distributions). The information for the fiscal years or periods ended March 31, 2022 and March 31, 2021 as applicable have been derived from financial statements audited by KPMG LLP, the Trust's independent registered public accounting firm, whose report, along with the financial highlights and financial statements, is included in the annual report to shareholders dated March 31, 2022, which is incorporated by reference herein and is available upon request.

Additional Information

Additional and more detailed information about the Funds are included in the SAI dated August 1, 2022. The SAI has been filed with the SEC and is incorporated by reference into this Prospectus and, therefore, legally forms a part of this Prospectus. The SEC maintains the EDGAR database on its website ("<http://www.sec.gov>") that contains the SAI, material incorporated by reference, and other information regarding registrants that file electronically with the SEC and copies of this information may be obtained, after paying a duplicating fee, by electronic request at the following e-mail address: publicinfo@sec.gov.

You may obtain a copy of the SAI or the Annual or Semi-Annual Reports or make inquiries, without charge by calling 1.855.857.2638, visiting www.kraneshares.com, or writing the Trust at 280 Park Avenue, 32nd Floor, New York, NY 10017. Additional information about the Funds' investments will be available in the Annual and Semi-Annual Reports. Also, in the Funds' Annual Report, you will find a discussion of the market conditions and investment strategies that significantly affected a Fund's performance during its last fiscal year.

No one has been authorized to give any information or to make any representations not contained in this Prospectus or in the Funds' SAI in connection with the offering of Fund shares. Do not rely on any such information or representations as having been authorized by a Fund, Krane or the sub-adviser, as applicable. This Prospectus does not constitute an offering by a Fund in any jurisdiction where such an offering is not lawful.

The Trust enters into contractual arrangements with various parties, including among others, the Funds' investment adviser, sub-adviser(s) (if applicable), distributor, custodian, and transfer agent who provide services to the Funds. Shareholders are not parties to any such contractual arrangements or intended beneficiaries of those contractual arrangements, and those contractual arrangements are not intended to create in any shareholder any right to enforce them against the service providers or to seek any remedy under them against the service providers, either directly or on behalf of the Trust.

This prospectus provides information concerning the Funds that you should consider in determining whether to purchase Fund shares. Neither this prospectus nor the SAI is intended, or should be read, to be or give rise to an agreement or contract between the Trust, the Trustees, or the Fund and any investor, or to give rise to any rights in any shareholder or other person other than any rights under federal or state law that may not be waived.

The Trust's Investment Company Act file number is 811-22698.
