

KraneShares™

Summary Prospectus

KraneShares 2x Long BIDU Daily ETF

Principal Listing Exchange for the Fund: Nasdaq Stock Market LLC
Ticker Symbol: KBDU

October 20, 2025

These securities have not been approved or disapproved by the U.S. Securities and Exchange Commission (“SEC”) or the U.S. Commodity Futures Trading Commission (“CFTC”), nor have the SEC or CFTC passed upon the adequacy of this Prospectus. Any representation to the contrary is a criminal offense.

The Fund seeks daily leveraged investment results and is intended to be used as a short-term trading vehicle. The Fund attempts to provide daily investment results that correspond to the long leveraged multiple of the performance of an underlying stock (the “Leveraged Long Fund”).

The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. The Fund is very different from most mutual funds and exchange-traded funds. Investors should note that:

- (1) The Leveraged Long Fund pursues a daily leveraged investment objective, which means that the Fund is riskier than alternatives that do not use leverage because the Fund magnifies the performance of its underlying stock.
- (2) Seeking to replicate the daily performance of an underlying stock means that the return of the Fund for a period longer than a full trading day will be the product of a series of daily returns for each trading day during the relevant period.

As a consequence, especially in periods of market volatility, the volatility of the underlying stock may affect the Fund's return as much as, or more than, the return of the underlying stock. Further, the return for investors that invest for periods less than a full trading day is likely to be different from the underlying stock's performance for the full trading day. During periods of high volatility, the Fund may not perform as expected and the Fund may have losses when an investor may have expected gains if the Fund is held for a period that is different than one trading day.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by sophisticated investors, such as traders and active investors employing dynamic strategies. Investors in the Fund should:

- (a) understand the risks associated with the use of leverage;
- (b) understand the consequences of seeking daily leveraged investment results; and
- (c) intend to actively monitor and manage their investments.

Investors who do not understand the Fund, or do not intend to actively manage their funds and monitor their investments, should not buy the Fund.

There is no assurance that the Fund will achieve its investment objective and an investment in the Fund could lose money. The Fund is not a complete investment program.

For the Leveraged Long Fund with a 2-time leverage exposure, if the underlying stock referenced by the Fund's underlying stock drops by more than 50% on a given trading day, the Fund's investors could lose all of their money.

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus, Statement of Additional Information, recent reports to shareholders and other information about the Fund online at www.kraneshares.com. You can also get this information at no cost by calling 1-855-857-2638, by sending an e-mail request to KraneFunds@seic.com or by asking any financial intermediary that offers shares of the Fund. The Fund's Prospectus and Statement of Additional Information, each dated April 7, 2025, as each may be amended or supplemented from time to time, are incorporated by reference into this Summary Prospectus and may be obtained, free of charge, at the website, phone number or email address noted above.

The KraneShares 2x Long BIDU Daily ETF (the “Fund”) seeks daily investment results of 2 times (200%) the daily percentage change of the ADR of Baidu Inc. (NASDAQ: BIDU) (the “Underlying Stock”). Because the Fund seeks daily leveraged investment results, it is very different from most other exchange-traded funds. It is also riskier than alternatives that do not use leverage. The return for investors that invest for periods longer or shorter than a trading day should not be expected to be 200% the performance of the Underlying Stock for the period. The return of the Fund for a period longer than a trading day will be the result of each trading day’s compounded return over the period, which will very likely differ from 200% the return of the Underlying Stock for that period. Longer holding periods, higher volatility of the Underlying Stock and leverage increase the impact of compounding on an investor’s returns. During periods of higher underlying stock volatility, the volatility of the Underlying Stock may affect the Fund’s return as much as, or more than, the return of the Underlying Stock.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (2X) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single day, the Fund will lose money if the Underlying Stock’s performance is flat, and it is possible that the Fund will lose money even if the Underlying Stock’s performance increases over a period longer than a single day. An investor could lose the full principal value of his/her investment within a single day.

Investment Objective

The Fund seeks daily investment results, before fees and expenses, of 2 times (200%) the daily percentage change of the ADR of Baidu Inc. (NASDAQ: BIDU).

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses	
(expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.25%
Distribution and/or Service (12b-1) Fees*	0.00%
Other Expenses**	0.01%
Total Annual Fund Operating Expenses***	1.26%

* Pursuant to a Distribution Plan, the Fund may bear a Rule 12b-1 fee not to exceed 0.25% per year of the Fund’s average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees has not currently approved the commencement of any payments under the Distribution Plan.

** Based on estimated amounts for the current fiscal year.

*** The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example. The total indirect cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is estimated to be 1.00% for the fiscal year ending March 31, 2026.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

1 Year	3 Years
\$128	\$400

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund's performance. Because the Fund has not commenced investment operations prior to the date of this prospectus, it does not have portfolio turnover information for the prior fiscal year to report.

Principal Investment Strategies

Under normal circumstances, the Fund invests at least 80% of its net assets (plus any borrowings for investment purposes) in the Underlying Stock and financial instruments, such as swap agreements and options, that, in combination, provide investment exposure to 2 times (200%) the performance of the Underlying Stock.

Generally, the Fund will invest in the Underlying Stock and enter into swap agreements on the Underlying Stock as it attempts to replicate 2 times (200%) the daily percentage change of the Underlying Stock. The Fund aims to generate 2 times the daily performance of the Underlying Stock for a single day. A "single day" is defined as being calculated "from the close of regular trading on one trading day to the close on the next trading day."

The Fund will enter into one or more swap agreements with major financial institutions for a specified period ranging from a day to more than one year whereby the Fund and the financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on the Underlying Stock. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing the Underlying Stock.

The Fund will attempt to achieve its investment objective without regard to overall market movement or the increase or decrease of the value of the Underlying Stock. Generally, the Fund pursues its investment objective regardless of market conditions and does not generally take defensive positions. If the Fund needs to take a temporary defensive position, it may result in the Fund not achieving its investment objective.

The impact of the Underlying Stock's price movements during the day will affect whether the Fund's portfolio needs to be rebalanced. For example, if the price of the Underlying Stock has risen on a given day, net assets of the Fund should rise, meaning that the Fund's exposure will need to be increased. Conversely, if the price of the Underlying Stock has fallen on a given day, net assets of the Fund should fall, meaning the Fund's exposure will need to be reduced. This daily rebalancing typically results in high portfolio turnover.

The Fund may invest in: (1) government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) cash and cash equivalents, including money market funds and repurchase agreements; (3) short-term bond funds and exchange-traded funds (“ETFs”), which can include affiliated ETFs; and/or (4) corporate or other non-government fixed-income securities, such as commercial paper and other short-term unsecured promissory notes. These may serve as collateral for the Fund’s investments in financial instruments, such as swap agreements and options.

The Fund is non-diversified. Due to the Fund’s investment strategies, the Fund will concentrate its investment in the particular industry to which its Underlying Stock is assigned (*i.e.*, hold 25% of more its total assets in investments that provide exposure to which the Underlying Stock is assigned). As of February 28, 2025, the Underlying Stock is assigned to the communication services sector and the media and entertainment industry.

Because of daily rebalancing and the compounding of each day’s return over time, the return of the Fund for periods longer than a single day will be the result of each day’s returns compounded over the period, which will very likely differ from 200% of the return of the Underlying Stock over the same period. The Fund will lose money if the Underlying Stock’s performance is flat over time. It is even possible, due to the result of daily rebalancing, the Underlying Stock’s volatility and the effects of compounding, that the Fund will lose money over time while the Underlying Stock’s performance increases over a period longer than a single day.

THE FUND, KRANESHARES TRUST, AND KRANE FUNDS ADVISORS, LLC (“KRANE” OR “ADVISER”) ARE NOT AFFILIATED WITH THE UNDERLYING STOCK.

Baidu Inc. is a Chinese multinational technology company that specializes in artificial intelligence and internet services. BIDU is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the Securities and Exchange Commission by Baidu Inc. pursuant to the Exchange Act can be located by reference to the Securities and Exchange Commission file number 000-51469 through the Securities and Exchange Commission’s website at www.sec.gov. In addition, information regarding Baidu Inc. may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding Baidu Inc. (BIDU) from the publicly available documents described above. Neither the Fund, the Trust, the Adviser nor any affiliate has participated in the preparation of such documents. Neither the Fund, the Trust, the Adviser nor any affiliate makes any representation that such publicly available documents or any other publicly available information regarding Baidu Inc. is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date of the prospectus (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of BIDU have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of, or failure to disclose, material future events concerning Baidu Inc. could affect the value of the Fund’s investments with respect to BIDU and therefore the value of the Fund.

Principal Risks

As with all ETFs, a shareholder of the Fund is subject to the risk that his or her investment could lose money. The Fund may not achieve its investment objective and an investment in the Fund is not by itself a complete or balanced investment program. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves the risk of total loss. In addition to these risks, the Fund is subject to a number of additional principal risks that may affect the Fund's performance, net asset value ("NAV") and trading price, including:

Underlying Stock Risk. The Underlying Stock is subject to many risks that can negatively impact its revenue and viability including, but are not limited to price volatility risk, management risk, inflation risk, global economic risk, growth risk, supply and demand risk, operations risk, regulatory risk, environmental risk, terrorism risk and the risk of natural disasters. The Underlying Stock is an artificial intelligence and internet service company. Artificial intelligence and internet service companies may have high research and capital expenditures and, as a result, their profitability can vary widely, if there profitable at all. The space in which they are engaged is highly competitive and issuers' products and services may become obsolete very quickly. These companies are heavily dependent on intellectual property rights and may be adversely affected by loss or impairment of those rights. The issuers are also subject to legal, regulatory and political changes that may have a large impact on their profitability. The Fund's daily returns may be affected by many factors but will depend on the performance and volatility of the Underlying Stock.

Baidu Inc. Investing Risk. Issuer-specific attributes may cause an investment held by the Fund to be more volatile than the market generally. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole. As of the date of this prospectus, in addition to the risks associated with companies in the communication sector, BIDU faces risks associated with: the highly competitive nature of the e-commerce industry; economic and market uncertainty; reductions in demand for its products; potential concentration of revenues in a few large clients; geopolitical events and pandemics; adequate protection of technology or other intellectual property; exchange rates; reliance on third parties to manufacture products; possible shortages of equipment or materials needed to manufacture products; cybersecurity attacks and data breaches; system failures or outages; potential incompatibility of product with some or all industry standard software and hardware; increases in costs; adverse government regulations; regulatory compliance costs; litigation; taxes; indebtedness; and the ability to attract and retain high quality talent.

Indirect Investment Risk. The Underlying Stock is not affiliated with the Trust, the Adviser or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of the Fund. The Trust, the Fund and any affiliate are not responsible for the performance of the Underlying Stock and make no representation as to the performance of the Underlying Stock. Investing in the Fund is not equivalent to investing in the Underlying Stock. Fund shareholders will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the Underlying Stock.

Effects of Compounding and Market Volatility Risk. The Fund seeks daily investment results, before fees and expenses, of 2 times (200%) the daily percentage change of the Underlying Stock and the Fund's performance for periods greater than a trading day will be the result of each day's returns compounded over the period, which is very likely to differ from the Underlying Stock's performance, before fees and expenses. Compounding affects all investments but has a more significant impact on funds that aims to replicate leverage daily returns. For a fund aiming to replicate 2 times the daily performance of an Underlying Stock, if adverse daily performance of the Underlying Stock reduces the amount of a shareholder's investment, any further adverse daily performance will lead to a smaller dollar loss because the shareholder's investment had already been reduced by the prior adverse performance. Equally, however, if the favorable daily performance of the Underlying Stock increases the amount of a shareholder's investment, the dollar amount lost due to future adverse performance will increase because the shareholder's investment has increased.

The effect of compounding becomes pronounced as the Underlying Stock volatility and the holding period increase. The impact of compounding will impact each shareholder differently depending on the period of time an investment in the Fund is held and the volatility of the Underlying Stock during the shareholder's holding period of an investment in the Fund.

The chart below provides examples of how Underlying Stock volatility could affect the Fund's performance. Fund performance for periods greater than one single day can be estimated given any set of assumptions for the following factors: a) Underlying Stock volatility; b) Underlying Stock's performance; c) period of time; d) financing rates associated with leveraged exposure; e) other Fund expenses; and f) the Underlying Stock's dividends. The chart below illustrates the impact of two principal factors – Underlying Stock volatility and performance – on Fund performance. The chart shows estimated Fund returns for a number of combinations of Underlying Stock volatility and performance over a one-year period. Performance shown in the chart assumes that (i) there were no Fund expenses; and (ii) borrowing rates (needed to obtain a leveraged long exposure) of 0%. If Fund expenses and/or actual borrowing/lending rates were reflected, the estimated returns would be lower than those shown. Particularly during periods of higher Underlying Stock volatility, compounding will cause results for periods longer than a trading day to vary from the performance of the Underlying Stock.

As shown in the chart below, the Fund would be expected to lose 6.0% if the Underlying Stock provided no return over a one-year period during which the Underlying Stock experienced annualized volatility of 25%. At higher ranges of volatility, there is a chance of a significant loss of value in the Fund, even if the Underlying Stock return is flat.

For instance, if the Underlying Stock annualized volatility is 100%, the Fund would be expected to lose 63.3% of its value, even if the cumulative Underlying Stock return for the year was 0%. Areas shaded red (or dark gray) represent those scenarios where the Fund can be expected to

return less than 200% of the performance of the Underlying Stock and those shaded green (or light gray) represent those scenarios where the Fund can be expected to return more than 200% of the performance of the Underlying Stock. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Tracking Error Risk" below.

One Year Performance of the Underlying Stock	200% of One Year Performance of the Underlying Stock	Volatility of the Underlying Stock (annualized)						
		10%	25%	50%	75%	100%	125%	150%

The Underlying Stock's annualized historical volatility rate for the five-year period ended December 31, 2024, was 53.29%. During this five-year period, the Underlying Stock's highest volatility rate over a 12-month period was 74.59% and volatility for a shorter period of time may have been substantially higher. The Underlying Stock's annualized performance for the five-year period ended December 31, 2024, was -7.77%. Historical volatility and performance are not indications of what the Underlying Stock volatility and performance will be in the future. The volatility of instruments that reflect the value of the Underlying Stock, such as swaps, may differ from the volatility of the Underlying Stock.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with Underlying Stock, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of Underlying Stock on such day.

In order to achieve a high degree of correlation with Underlying Stock, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to Underlying Stock may prevent the Fund from achieving a high degree of correlation with Underlying Stock and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments

in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by Underlying Stock's movements, including intraday movements. Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when Underlying Stock is volatile, particularly when Underlying Stock is volatile at or near the close of the trading day.

A number of other factors may also adversely affect the Fund's correlation with Underlying Stock, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take or refrain from taking positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with Underlying Stock. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to Underlying Stock. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of Underlying Stock. Any of these factors could decrease correlation between the performance of the Fund and Underlying Stock and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Leverage Risk. The Fund obtains investment exposure in excess of its net assets by utilizing leverage and may lose more money in market conditions that are adverse to its investment objective than a fund that does not utilize leverage. An investment in the Fund is exposed to the risk that a decline in the daily performance of the Underlying Stock will be magnified. This means that an investment in the Fund will be reduced by an amount equal to 2% for every 1% daily decline in the Underlying Stock, not including the costs of financing leverage and other operating expenses, which would further reduce its value. The Fund could theoretically lose an amount greater than its net assets in the event the Underlying Stock declines more than 50%. Leverage will also have the effect of magnifying any differences in the Fund performance's correlation with the Underlying Stock.

Due to the limited availability of necessary investments or financial instruments, the Fund could, among other things, as a defensive measure, limit or suspend creations or redemptions of Creation Units until the adviser determines that the requisite exposure to the Underlying Stock is obtainable. During the period that creation or redemptions are affected, the Fund's shares could trade at a significant premium or discount to their net asset value or the bid-ask spread of the Fund's shares could widen significantly. In the case of a period during which creations are suspended, the Fund could experience significant redemptions, which may cause the Fund to sell portfolio securities at unfavorable prices and increased transaction and other costs and make greater taxable distributions to shareholders of the Fund.

Artificial Intelligence and Internet Company Risk. Artificial Intelligence ("AI") technology is generally highly reliant on the collection and analysis of large amounts of data, and it is not possible or practicable to incorporate all relevant data into the model that such AI utilizes to operate. Certain data in such models will inevitably contain a degree of inaccuracy and error — potentially materially so — and could otherwise be inadequate or flawed, which would be likely to degrade the effectiveness of the AI technology. Companies involved in, or exposed to, artificial intelligence-related businesses may have limited product lines, markets, financial resources or personnel. These companies face intense competition and potentially rapid product obsolescence, and many depend significantly on

retaining and growing the consumer base of their respective products and services. Many of these companies are also reliant on the end-user demand of products and services in various industries that may in part utilize artificial intelligence. Further, many companies involved in, or exposed to, artificial intelligence-related businesses may be substantially exposed to the market and business risks of other industries or sectors, and the Fund may be adversely affected by negative developments impacting those companies, industries or sectors.

Many Internet-related companies have incurred large losses since their inception and may continue to incur large losses in the hope of capturing market share and generating future revenues. Accordingly, many such companies expect to incur significant operating losses for the foreseeable future, and may never be profitable. The markets in which many Internet companies compete face rapidly evolving industry standards, frequent new service and product announcements, introductions and enhancements, and changing customer demands. The failure of an Internet company to adapt to such changes could have a material adverse effect on the company's business. Additionally, the widespread adoption of new Internet, networking, telecommunications technologies, or other technological changes could require substantial expenditures by an Internet company to modify or adapt its services or infrastructure, which could have a material adverse effect on an Internet company's business.

China Risk. The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions in China ("China" or the "PRC") and surrounding Asian countries and may demonstrate significantly higher volatility from time to time in comparison to developed markets. China may be subject to considerable degrees of economic, political and social instability. Over the last few decades, the Chinese government has undertaken reform of economic and market practices and has expanded the sphere of private ownership of property in China. However, Chinese markets generally continue to experience inefficiency, volatility and pricing anomalies resulting from governmental influence, a lack of publicly available information and/or political and social instability. Chinese companies are also subject to the risk that Chinese authorities can intervene in their operations and structure. In addition, the Chinese economy is export-driven and highly reliant on trading with key partners. A downturn in the economies of China's primary trading partners could slow or eliminate the growth of the Chinese economy and adversely impact the Fund's investments. The Chinese government strictly regulates the payment of foreign currency denominated obligations and sets monetary policy. The RMB is not freely convertible, but rather is subject to approval of PRC authorities. Although Chinese authorities have indicated an intent to move to a freely convertible RMB, there is no assurance that repatriation restrictions will not continue. The Chinese government may introduce new laws and regulations that could have an adverse effect on the Fund. Although China has begun the process of privatizing certain sectors of its economy, privatized entities may lose money and/or be re-nationalized.

In the Chinese securities markets, a small number of issuers may represent a large portion of the entire market. The Chinese securities markets are subject to more frequent trading halts, low trading volume and price volatility. Recent developments in relations between the United States and China have heightened concerns of increased tariffs and restrictions on trade between the two countries. An increase in tariffs or trade restrictions, or even the threat of such developments, could lead to a significant reduction in international trade, which could have a negative impact on China's export industry and a commensurately negative impact on the Fund.

In recent years, Chinese entities have incurred significant levels of debt and Chinese financial institutions currently hold relatively large amounts of non-performing debt. Thus, there exists a possibility that widespread defaults could occur, which could trigger a financial crisis, freeze Chinese debt and finance markets and make Chinese securities illiquid.

In addition, trade relations between the U.S. and China have been strained. Worsening trade relations between the two countries could adversely impact the Fund, particularly to the extent that the Chinese government restricts foreign investments in on-shore Chinese companies or the U.S. government restricts investments by U.S. investors in China. Worsening trade relations may also result in market volatility and volatility in the price of Fund shares.

Disclosure and regulatory standards in emerging market countries, such as China, are in many respects less stringent than U.S. standards. There is substantially less publicly available information about Chinese issuers than there is about U.S. issuers.

The tax laws and regulations in China are somewhat unclear and are subject to change, possibly with retroactive effect. The interpretation, application and enforcement of such laws and regulations by the applicable authorities may vary over time and from region to region, and could have an adverse effect on the Fund and its shareholders, particularly in relation to tax imposed upon foreign investors' capital gains. Uncertainties in Chinese tax rules could result in unexpected tax liabilities for the Fund.

Concentration Risk. The Fund's assets are expected to be concentrated in the particular industry to which its Underlying Stock is assigned. The securities of companies in an industry or group of industries could react similarly to market developments. Thus, the Fund is subject to loss due to adverse occurrences that affect one industry or group of industries or sector. While the Fund's sector and industry exposure may vary over time based on the particular industry to which its Underlying Stock is assigned, the Fund is currently subject to the principal risks described below.

Communication Services Sector Risk. The communication services sector may be dominated by a small number of companies which may lead to additional volatility in the sector. Communication services companies are particularly vulnerable to the potential obsolescence of products and services due to technological advances and the innovation of competitors. Communication services companies may also be affected by other competitive pressures, such as pricing competition, as well as research and development costs, substantial capital requirements, and government regulation. Fluctuating domestic and international demand, shifting demographics, and often unpredictable changes in consumer demand can drastically affect a communication services company's profitability. Compliance with governmental regulations, delays or failure to receive regulatory approvals, or the enactment of new regulatory requirements may negatively affect the business of telecommunication services companies. Certain companies in the communication services sector may be particular targets of network security breaches, hacking and potential theft of proprietary or consumer information, or disruptions in services, which would have a material adverse effect on their businesses.

Media and Entertainment Industry Risk. Media, entertainment and related industries can be significantly affected by several factors, including competition, particularly in formulation of products and services using new technologies, high costs of production, research and development for new content, products and services, rapid obsolescence of products, cyclicalities of revenues and earnings, a potential decrease in the discretionary income of targeted individuals, changing consumer tastes, preferences and discretionary income patterns, legislative or regulatory changes and a potential increase in government regulation.

Counterparty Risk. A counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest or settlement payments, or otherwise honor its obligations. If this occurs, it could result in a reduction in the NAV of the Fund and could impair the Fund's ability to achieve its investment objective. The counterparty risk associated with the Fund's investments will be greater if the Fund uses only a limited number of counterparties. If there are only a couple of potential counterparties, the Fund, subject to applicable law, may enter into transactions with as few as one counterparty at any time.

Derivatives Risk. The use of derivatives (including swaps, futures, forwards, structured notes and options) may involve leverage, which includes risks that are different from, and greater than, the risks associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value and valuation may be more difficult in times of market turmoil. There may be imperfect correlation between the derivative and that of the reference asset, resulting in unexpected returns that could materially adversely affect the Fund. Certain derivatives (such as swaps and options) are bi-lateral agreements that expose the Fund to counterparty risk, which is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of derivative. In that case, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations. That risk is generally thought to be greater with over-the-counter (OTC) derivatives than with derivatives that are exchange traded or centrally cleared. Counterparty risks are compounded by the fact that there are only a limited number of ways available to invest in certain reference assets and, therefore, there may be few counterparties to swaps or options based on those reference assets.

Swap Risk. Swaps are subject to tracking risk because they may not be perfect substitutes for the instruments they are intended to hedge or replace. Over the counter swaps are subject to counterparty default. Leverage inherent in derivatives will tend to magnify the Fund's losses.

ETF Risk. As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for ETFs, such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

Cash Transactions Risk. Like other ETFs, the Fund sells and redeems its shares only in large blocks called Creation Units and only to "Authorized Participants." Unlike many other ETFs, however, the Fund expects to effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities. Thus, an investment in the Fund may be less tax-efficient than an investment in other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. As a result, the Fund may pay out higher capital gains distributions than ETFs that redeem in-kind. Further, paying redemption proceeds in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to

obtain the cash needed to distribute redemption proceeds at an inopportune time. Cash transactions may involve considerable transaction expenses and taxes, including brokerage fees, that might not have occurred if the Fund utilized in-kind transactions. To the extent any costs associated with cash transactions are not offset by any transaction fees payable by an Authorized Participant, the Fund's performance could be negatively impacted.

Premium/Discount Risk. There may be times when the market price of the Fund's shares is more than the NAV intra-day (at a premium) or less than the NAV intra-day (at a discount). As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop loss orders to sell Fund shares may be executed at prices well below NAV.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of shares. Secondary market trading is subject to bid-ask spreads and trading in Fund shares may be halted by the Exchange because of market conditions or other reasons. If a trading halt occurs, a shareholder may temporarily be unable to purchase or sell shares of the Fund. In addition, although the Fund's shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained or that the Fund's shares will continue to be listed.

New Fund Risk. If the Fund does not grow in size, it will be at greater risk than larger funds of wider bid-ask spreads for its shares, trading at a greater premium or discount to NAV, liquidation and/or a stop to trading.

Fixed Income Securities Risk. Fixed income securities are subject to credit risk and interest rate risk. Credit risk refers to the possibility that the issuer of a security will not make timely interest payments or repay the principal of the debt issued (i.e., default on its obligations). A downgrade or default on securities held by the Fund could adversely affect the Fund's performance. Generally, the longer the maturity and the lower the credit quality of a security, the more sensitive it is to credit risk. Interest rate risk refers to fluctuations in the value of a debt resulting from changes in the level of interest rates. When interest rates go up, the prices of most debt instruments generally go down; and when interest rates go down, the prices of most debt instruments generally go up. Debt instruments with longer durations tend to be more sensitive to interest rate changes, typically making them more volatile. Interest rates have recently increased and may continue increasing, thereby heightening the risks associated with rising interest rates.

High Portfolio Turnover Risk. Daily rebalancing of the Fund's holdings pursuant to its daily investment objective causes a much greater number of portfolio transactions when compared to most ETFs. Additionally, active secondary market trading of the Fund's shares could cause more frequent creation and redemption activities, which would increase the number of portfolio transactions. High levels of portfolio transactions may cause higher transaction costs because of increased broker commissions resulting from such transactions and increased taxable capital gains. The Fund calculates portfolio turnover without including the short-term cash instruments or derivative transactions that comprise most of the Fund's trading. As such, if the Fund's extensive use of derivative instruments were reflected, the calculated portfolio turnover rate would be significantly higher.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on Krane's success or failure to implement investment strategies for the Fund. Krane's evaluations and assumptions regarding investments, markets, trends, and other factors may not successfully achieve the Fund's investment objective given actual market conditions.

Market Risk. The values of the Fund's holdings could decline generally or could underperform other investments. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, and/or other government actors, including those in foreign countries, could cause volatility in global financial markets, negative sentiment and higher levels of Fund redemptions, which could have a negative impact on the Fund and could result in losses. Geopolitical and other risks, including environmental and public health risks may add to instability in world economies and markets generally. Changes in value may be temporary or may last for extended periods and can occur suddenly and unexpectedly. Further, the Fund is susceptible to the risk that certain investments may be difficult or impossible to sell at a favorable time or price. Market developments may also cause the Fund's investments to become less liquid and subject to erratic price movements.

Non-Diversified Fund Risk. Because the Fund is non-diversified and may invest a greater portion of its assets in fewer issuers than a diversified fund, changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to the Underlying Stock that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Although the Underlying Stock's shares are listed for trading on an exchange, there can be no assurance that an active trading market for such shares will be available at all times and the exchange may halt trading of such shares in certain circumstances. A halt in trading in the Underlying Stock's shares is expected, in turn, to result in a halt in the trading in the Fund's shares. Trading in the Underlying Stock's and/or Fund's shares on the exchange may be halted due to market conditions or for reasons that, in the view of the exchange, make trading in the Underlying Stock's and/or Fund's shares inadvisable. In addition, trading in Underlying Stock's and/or Fund's shares on an exchange is subject to trading halts caused by extraordinary market volatility pursuant to exchange "circuit breaker" rules. In the event of a trading halt for an extended period of time, the Fund may be unable to execute arrangements with swap counterparties that are necessary to implement the Fund's investment strategy.

Tracking Error Risk. Tracking error is the divergence of the Fund's performance from that of its investment objective which aims to replicate 2 times the daily percentage change of the Underlying Stock. The performance of the Fund may diverge from that of its investment objective for a number of reasons. Tracking error may occur because of transaction costs, the Fund's holding of cash, differences in accrual of dividends, being under- or overexposed to the Underlying Stock or the need to meet new or existing regulatory requirements. Tracking error risk may be heightened during times of market volatility or other unusual market conditions. The Fund may be required to deviate from

its investment objective as a result of market restrictions or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Adviser and its affiliates.

Tax Risk. In order to qualify for the favorable tax treatment available to regulated investment companies, the Fund must satisfy certain income, asset diversification and distribution requirements each year. The Fund's pursuit of its investment strategy will potentially be limited by the Fund's intention to qualify for such treatment and could adversely affect the Fund's ability to so qualify. The Fund may make certain investments, the treatment of which for these purposes is unclear. The Fund's investments in issuers whose control persons are not certain creates a risk that tax authorities may retrospectively deem the Fund to have failed the asset diversification requirements. If the Fund were to fail the favorable tax treatment requirements, it would be taxed in the same manner as an ordinary corporation, which would adversely affect its performance.

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Operational and Cybersecurity Risk. The Fund, Krane, its service providers and your ability to transact with the Fund may be negatively impacted due to operational matters arising from, among other problems, human errors, systems and technology disruptions or failures, or cybersecurity incidents. Cybersecurity incidents may allow an unauthorized party to gain access to fund assets, customer data, or proprietary information, or cause the Fund or its service providers, as well as the securities trading venues and their service providers, to suffer data corruption or lose operational functionality. It is not possible for Krane or the other Fund service providers to identify all of the cybersecurity or other operational risks that may affect the Fund or to develop processes and controls to completely eliminate or mitigate their occurrence or effects.

Performance Information

Once the Fund has completed a full calendar year of operations, a bar chart and table will be included in this Prospectus that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the variability of the Fund's return to a broad measure of market performance. Once available, the Fund's current performance information will be available at www.kraneshares.com. Past performance does not necessarily indicate how the Fund will perform in the future.

Management

Investment Adviser

Krane Funds Advisors, LLC ("Krane" or "Adviser") serves as the investment adviser to the Fund.

Portfolio Managers

James Maund, Head of Capital Markets at the Adviser, has served as the lead portfolio manager of the Fund since the Fund's inception. Jonathan Shelon, Chief Operating Officer of the Adviser, supports Mr. Maund and Krane's investment team for the Fund and has been a portfolio manager of the Fund since the Fund's inception.

Purchase and Sale of Fund Shares

Shares may be purchased and redeemed from the Fund only in a large specified number of Shares each called a "Creation Unit," or multiples thereof. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on the Exchange. Individual shares can be bought and sold throughout the trading day like other publicly traded securities through a broker-dealer on the Exchange. These transactions do not involve the Fund. The price of an individual Fund share is based on market prices, which may be different from its NAV. As a result, the Fund's shares may trade at a price greater than the NAV (at a premium) or less than the NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). Most investors will incur customary brokerage commissions and charges when buying or selling shares of the Fund through a broker-dealer.

Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid ask spreads, are available on the Fund's website at www.kraneshares.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account, which may be taxable upon withdrawal.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary's website for more information.
