

KraneSharesTM

Summary Prospectus

KraneShares Dragon Capital Growth of Vietnam Index ETF (formerly, Kraneshares Dragon Capital Vietnam Growth Index ETF)

Principal Listing Exchange for the Fund: NYSE Arca, Inc. (the "Exchange")
Ticker Symbol: KPHO

August 1, 2026

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus, Statement of Additional Information, recent reports to shareholders and other information about the Fund online at www.kraneshares.com. You can also get this information at no cost by calling 1-855-857-2638, by sending an e-mail request to KraneFunds@seic.com or by asking any financial intermediary that offers shares of the Fund. The Fund's Prospectus and Statement of Additional Information, each dated August 1, 2026, as each may be amended or supplemented from time to time, are incorporated by reference into this Summary Prospectus and may be obtained, free of charge, at the website, phone number or email address noted above.

Investment Objective

The KraneShares Dragon Capital Growth of Vietnam Index ETF (the “Fund”) seeks to provide investment results that, before fees and expenses, correspond generally to the price and yield performance of a specific equity securities index. The Fund’s current index is the Dragon Capital MerQube Vietnam Growth Index (the “Underlying Index”).

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses	
(expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.78%
Distribution and/or Service (12b-1) Fees*	0.00%
Other Expenses**	0.01%
Acquired Fund Fees and Expenses***	0.23%
Total Annual Fund Operating Expenses	1.02%

* Pursuant to a Distribution Plan, the Fund may bear a Rule 12b-1 fee not to exceed 0.25% per year of the Fund’s average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees has not currently approved the commencement of any payments under the Distribution Plan.

** Based on estimated amounts for the current fiscal year.

*** “Acquired Fund Fees and Expenses” are expenses incurred indirectly by the Fund through its ownership of shares of other investment companies (such as exchange-traded funds). They are not direct operating expenses paid by Fund shareholders and are not used to calculate the Fund’s net asset value (“NAV”). Based on estimated amounts for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

1 Year	3 Years
\$104	\$325

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. From the Fund’s inception, December 2, 2025, the Fund’s portfolio turnover rate was 29% of the average value of its portfolio.

Principal Investment Strategies

Under normal circumstances, the Fund invests at least 80% of its net assets (plus borrowings for investment purposes) in securities of the Underlying Index and other instruments that have economic characteristics similar to those in the Underlying Index. The Underlying Index is designed to measure the performance of stocks and foreign exchange-traded funds ("ETFs") that are listed on the Ho Chi Minh City Stock Exchange ("HOSE") and available for investment by U.S. investors, notwithstanding foreign ownership limits ("FOLs"). The Underlying Index's foreign ETFs consist of the Diamond ETFs, which are foreign ETFs that track the VN Diamond Index. The VN Diamond Index is designed to measure the performance of HOSE-listed companies that attract significant foreign capital and, therefore, are or may become subject to a FOL. The Fund intends to invest in foreign ETFs advised by an affiliate of Dragon Capital Management (HK) Limited, the Fund's Sub-Adviser ("Sub-Adviser").

From this universe of eligible equity securities, MerQube (the "Index Provider") screens stocks based on the fundamental criteria and growth criteria as described below.

With respect to the fundamental criteria, the Index Provider screens for certain ranges of both price-to-earnings ratios and asset-to-equity ratios. The price-to-earnings ratios look at both one year and three-year periods and must be within certain ranges. The asset-to-equity ratio must be within certain ranges, except that companies in the banks industry are automatically included and companies in the capital markets industry have a different threshold than companies in other industries, which is more favorable.

With respect to the growth criteria, the Index Provider selects securities with the highest proprietary growth ratio and selects a minimum of 40 stocks with foreign room available (i.e., companies that have not reached their FOL). The growth ratio is calculated by the Index Provider based on total equity growth and corporate actions including stock dividends and stock bonuses.

Stocks that have reached or are nearing their FOL and meet all criteria will be replaced by the Diamond ETFs as an index constituent, with the Diamond ETFs capped at 24% of the Underlying Index. The Index Provider calculates weights for the Underlying Index using an optimization process that considers factors such as market capitalization, liquidity, the growth ratio and other fundamental factors (e.g., net profit). In addition, preference is given to existing index constituents of the Underlying Index versus new entrants.

The Fund may invest up to 20% of its assets in instruments that are not included in the Underlying Index, but that the Fund's investment adviser, Krane Funds Advisors, LLC ("Krane" or "Adviser"), or the Sub-Adviser believes will help the Fund track the Underlying Index. These investments may include equity securities and depositary receipts of issuers whose securities are not constituents of the Underlying Index, derivative instruments (including swaps, futures, forwards, structured notes and options), other investment companies (including ETFs), foreign ETFs and cash or cash equivalents (including money market funds). Certain other investment companies or foreign ETFs in which the Fund may invest may be advised, sponsored or otherwise serviced by Krane, the Sub-Adviser and/or their affiliates.

Although the Fund expects to replicate (or hold all constituents of) the Underlying Index, the Fund reserves the right to use a representative sampling strategy to track the Underlying Index. "Representative sampling" is a strategy that involves investing in a representative sample of securities that collectively have an investment profile similar to that of the Underlying Index.

As of March 31, 2026, the Underlying Index included one foreign fund and 55 securities of companies with a market capitalization range of approximately \$73 million to \$18 billion and an average market capitalization of approximately \$2.4 billion. The Fund is non-diversified. To the extent the Underlying Index is concentrated in a particular industry, the Fund is expected to be concentrated in that industry. As of March 31, 2026, issuers in the Financials sector (38.6%), Consumer Discretionary sector (27.8%), Industrials sector (16.1%) and Information Technology sector (11.4%) represented significant portions of the Underlying Index. The Underlying Index is rebalanced quarterly and reconstituted biannually.

The Fund may engage in securities lending.

Principal Risks

As with all ETFs, a shareholder of the Fund is subject to the risk that his or her investment could lose money. The Fund may not achieve its investment objective and an investment in the Fund is not by itself a complete or balanced investment program. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves the risk of total loss. In addition to these risks, the Fund is subject to a number of additional principal risks that may affect the Fund's performance, net asset value ("NAV") and trading price, including:

Vietnam Risk. Vietnamese companies face risks associated with expropriation and/or nationalization of assets (including property and real estate), restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. The Vietnamese government may exercise substantial influence over many aspects of the private sector, and may own or control certain companies therein. Accordingly, government actions could have a significant effect on economic conditions in the country, and on market conditions and prices of Vietnamese securities.

Vietnam is dependent on trading relationships with certain key trading partners, including the United States, China and Japan, and as a result may be adversely affected if demand for Vietnam's exports in those nations declines. Vietnam has become a manufacturing hub and an important component of the global supply chains for many different industries, in some cases benefiting from the changing economic and political climate in other regional manufacturing hubs such as China. If this trend slows or reverses, Vietnamese companies across all industries would be adversely impacted. The Vietnamese government has undertaken reform of economic and market practices in recent years, but issues such as foreign ownership limits and lack of in-kind transfers remain. If deterioration occurs in Vietnam's balance of payments, it could impose temporary restrictions on foreign capital remittances. The Fund could be adversely affected by delays in, or a refusal to grant, any required governmental approval for repatriation of capital, as well as by the application to the Fund of any restrictions on investments. Investing in Vietnam may require the Fund to adopt special procedures, seek local government approvals or take other actions, each of which may involve additional costs to the Fund. Vietnam may levy withholding or other taxes on dividend and interest income received by the Fund. Although in some cases a portion of these taxes may be recoverable, the non-recovered

portion of foreign withholding taxes will reduce the income received from the Fund's investments. The currencies of frontier markets, such as Vietnam, may be subject to more significant fluctuations and greater likelihood for speculation than the currencies of more developed markets.

The securities markets in Vietnam are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Vietnam are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control, heavy regulation of labor and industry and inflation. Vietnam has experienced, and may in the future experience, a high inflation rate, which is at least partially a result of the country's large trade deficit. Due to governmental focus on economic growth at the expense of currency stability, the inflation rate may continue at a high level and economic stability could be threatened. Moreover, trading on securities markets may be suspended altogether. Also, market volatility may be further heightened by the actions of a few major investors. For example, a substantial increase or decrease in cash flows of funds investing in these markets could significantly affect local stock prices.

The government in Vietnam may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Vietnam. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Vietnam. Moreover, Vietnam may require governmental approval or special licenses prior to investments by foreign investors and may also require governmental approval in connection with the repatriation of capital by foreign investors. The Vietnamese government may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Vietnam and/or impose additional taxes on foreign investors.

These factors, among others, make investing in issuers located or operating in Vietnam significantly riskier than investing in issuers located or operating in more developed countries.

Asia-Pacific Risk. Investments in securities of issuers in Asia-Pacific countries involve risks that are specific to the Asia-Pacific region, including certain legal, regulatory, political and economic risks, including high interest rates, economic volatility, inflation, currency devaluations and high unemployment rates. Certain Asia-Pacific countries have experienced expropriation and/or nationalization of assets, confiscatory taxation, political instability, armed conflict and social instability as a result of religious, ethnic, socio-economic and/or political unrest. Political instability could have an adverse effect on economic or social conditions in these economies and may result in outbreaks of civil unrest, terrorist attacks or threats or acts of war in the affected areas, any of which could adversely affect the Fund. Some economies in this region are dependent on a range of commodities, and are strongly affected by international commodity prices and particularly vulnerable to price changes for these products. The market for securities in this region may also be directly influenced by the flow of international capital, and by the economic and market conditions of neighboring countries. Many Asia-Pacific economies have experienced rapid growth and industrialization, and there is no assurance that this growth rate will be maintained. Some Asia-Pacific economies are highly dependent on trade and economic conditions in other countries can impact these economies. Singapore, Malaysia, Thailand, Indonesia and the Philippines present different economic and political conditions from those in Western markets.

Equity Securities Risk. The values of equity securities are subject to factors such as market fluctuations, changes in interest rates and perceived trends in stock prices. Equity securities may be more volatile than other asset classes and are generally subordinate in rank to debt and other securities of the same issuer.

Non-Diversified Fund Risk. Because the Fund is non-diversified and may invest a greater portion of its assets in fewer issuers than a diversified fund, changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

Emerging Markets Risk. The Fund may invest in markets that are considered to be "emerging." Investing in securities listed and traded in emerging markets may be subject to additional risks associated with emerging market economies. Such risks may include: (i) greater market volatility, (ii) greater risk of asset seizures and capital controls, (iii) lower trading volume and liquidity, (iv) greater social, political and economic uncertainty, (v) governmental controls on foreign investments and limitations on repatriation of invested capital, (vi) lower disclosure, corporate governance, auditing and financial reporting standards, (vii) fewer protections of property rights, (viii) restrictions on the transfer of securities or currency, and (ix) settlement and trading practices that differ from U.S. markets. Emerging markets are generally less liquid and less efficient than developed securities markets. The economies of emerging markets, and China in particular, may be heavily reliant upon international trade and may suffer disproportionately if international trading declines or is disrupted. Investments in emerging markets may be considered speculative.

Frontier Markets Risk. Frontier markets are those emerging markets that are considered to be among the smallest, least mature and least liquid, and as a result, may be more likely to experience inflation risk, political turmoil and rapid changes in economic conditions than more developed and traditional emerging markets. Investments in frontier markets may be subject to a greater risk of loss than investments in more developed and traditional emerging markets. Frontier markets often have less uniformity in accounting and reporting requirements, unreliable securities valuation and greater risk associated with custody of securities. Economic, political, illiquidity and currency risks may be more pronounced with respect to investments in frontier markets than in emerging markets.

Foreign Securities Risk. Investments in securities of non-U.S. issuers may be less liquid than investments in U.S. issuers, may have less governmental regulation and oversight, and are typically subject to different investor protection standards than U.S. issuers. Investments in non-U.S. securities entail the risk of loss due to foreign currency fluctuations, political or economic instability, less complete financial information about the issuers, the possible imposition of withholding or confiscatory taxes, the possible seizure or nationalization of foreign holdings, and the possible establishment of exchange controls or freezes on the convertibility of currency. Foreign market trading hours, clearance and settlement procedures, and holiday schedules may limit the Fund's ability to buy and sell securities. Additionally, foreign issuers may be subject to different accounting, auditing, recordkeeping, and financial reporting requirements. Securities of issuers traded on foreign exchanges may be suspended, either by the issuers themselves, by an exchange or by governmental authorities. If the Fund holds positions in such suspended securities, the Fund may be adversely impacted. Certain countries in which the Fund may invest may be subject to extended settlement delays and/or foreign holidays, during which the Fund will unlikely be able to convert holdings to cash. All of these factors could result in a loss to the Fund.

Geographic Focus Risk. The Fund's investments are expected to be focused in a particular country, countries, or region to approximately the same degree as the Index and therefore the Fund may be susceptible to adverse market, political, regulatory, and geographic events affecting that country, countries or region. Such geographic focus also may subject the Fund to a higher degree of volatility than a more geographically diversified fund.

Currency Risk. To the extent that the Fund is exposed directly or indirectly to foreign currencies, including through its investments, or invests in securities or other instruments denominated in or indexed to foreign currencies, changes in currency exchange rates could adversely impact investment gains or add to investment losses. Currency exchange rates may fluctuate significantly over short periods of time and can be affected unpredictably by intervention, or failure to intervene, by U.S. or foreign governments or central banks or by currency controls or political developments in the U.S. or abroad. The Fund may also be subject to delays in converting or transferring U.S. dollars to foreign currencies and vice versa. This may adversely affect the Fund's performance.

A forward foreign currency contract involves a negotiated obligation to purchase or sell a specific currency at a future date (with or without delivery required), which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. Forward foreign currency contracts are not traded on exchanges; rather, a bank or dealer will act as agent or as principal in order to make or take future delivery, exposing the Fund to counterparty risk.

Concentration Risk. From time to time, based on market or economic conditions, the Fund may have significant positions in one or more sectors or industries of the market. To the extent the Fund invests more heavily in particular sectors, its performance will be especially sensitive to developments that significantly affect those sectors. Individual sectors may be more volatile, and may perform differently, than the broader market. The industries that constitute a sector may all react in the same way to economic, political or regulatory events. Thus, the Fund is subject to loss due to adverse occurrences that affect one industry or group of industries or sector. While the Fund's sector and industry exposure is expected to vary over time, the Fund is currently subject to the principal risks of the sectors and industries disclosed herein.

Financials Sector Risk. The performance of companies in the financials sector may be adversely impacted by many factors, including, among others, government regulations, economic conditions, credit rating downgrades, changes in interest rates, and decreased liquidity in credit markets. This sector has experienced significant losses in the recent past, and the impact of more stringent capital requirements and of recent or future regulation on any individual financial company or on the sector as a whole cannot be predicted.

Consumer Discretionary Sector Risk. The success of consumer product manufacturers and retailers is tied closely to the performance of the overall domestic and international economy, interest rates, competition and consumer confidence. Success depends heavily on disposable household income and consumer spending. Changes in demographics and consumer tastes can also affect the demand for, and success of, consumer products in the marketplace.

Industrials Sector Risk. The industrials sector may be affected by changes in the supply and demand for products and services, product obsolescence, claims for environmental damage or product liability and general economic conditions, among other factors. Government regulation will also affect the performance of investments in such industrials sector issuers, particularly aerospace and defense companies, which rely to a significant extent on government demand for their products

and services. Transportation companies, another component of the industrials sector, are subject to sharp price movements resulting from changes in the economy, fuel prices, labor agreements and insurance costs.

Information Technology Sector Risk. Market or economic factors impacting information technology companies and companies that rely heavily on technology advances could have a major effect on the value of stocks in the information technology sector. The value of stocks of technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from competitors with lower production costs. Information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability. Additionally, companies in the information technology sector may face dramatic and often unpredictable changes in growth rates and competition for the services of qualified personnel.

New/Small Fund Risk. The Fund is small and does not yet have a significant number of shares outstanding or significant assets under management and, therefore, even small trading or similar errors, if experienced, may have a significant impact on NAV. Small funds are at greater risk than larger funds of wider bid-ask spreads for its shares, trading at a greater premium or discount to NAV, liquidation and/or a stop to trading.

ETF Risk. As an ETF, the Fund is subject to the following risks:

Premium/Discount Risk. There may be times when the market price of the Fund's shares is more than the NAV intra-day (at a premium) or less than the NAV intra-day (at a discount). As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop loss orders to sell Fund shares may be executed at prices well below NAV.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market may pay brokerage commissions, which may be a significant proportional cost for investors buying or selling relatively small amounts of shares. Secondary market trading is subject to bid-ask spreads and trading in Fund shares may be halted by the Exchange because of market conditions or other reasons. Although the Fund's shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained or that the Fund's shares will continue to be listed. Trading in the Fund's shares on the exchange may be halted due to market conditions or for reasons that, in the view of the exchange, make trading in the Fund's shares inadvisable, such as extraordinary market volatility. In the event of a trading halt for an extended period of time, the Fund may be unable to execute its investment strategy and shareholders may be unable to liquidate any position in Fund shares.

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting.

Cash Transactions Risk. Because the Fund may effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities, an investment in the Fund may be less tax-efficient than an investment in other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. Cash transactions may involve considerable transaction expenses and taxes, including brokerage fees, that might not have occurred if the Fund utilized in-kind transactions. To the extent any costs associated with cash transactions are not offset by any transaction fees payable by an Authorized Participant, the Fund's performance could be negatively impacted.

International Closed Market Trading Risk. To the extent the Fund's investments trade in markets that are closed when the Fund and Exchange are open, there are likely to be deviations between current pricing of an underlying security and the prices at which the underlying securities are valued for purposes of the Fund's NAV. As a result, Shares may appear to trade at a significant discount or premium to NAV greater than those incurred by other ETFs. In addition, shareholders may not be able to purchase or redeem their shares of the Fund, or purchase or sell shares of the Fund on the Exchange, on days when the NAV of the Fund could be significantly affected by events in the relevant non-U.S. markets.

Liquidity Risk. The Fund's investments are subject to liquidity risk, which exists when an investment is or becomes difficult or impossible to purchase or sell at an advantageous time and price. If a transaction is particularly large or if the relevant market is or becomes illiquid, it may not be possible to initiate a transaction or liquidate a position, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. Liquidity risk may be the result of, among other things, market turmoil, the reduced number and capacity of traditional market participants, or the lack of an active trading market. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, new legislation or regulatory changes inside or outside the U.S. Liquid investments may become less liquid after being purchased by the Fund, particularly during periods of market stress. In addition, if a number of securities held by the Fund stop trading, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt.

Large Capitalization Company Risk. Large capitalization companies may be unable to respond quickly to new competitive challenges and attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion. As such, returns on investments in stocks of large capitalization companies could trail the returns on investments in stocks of small and mid capitalization companies.

Small- and Mid-Capitalization Company Risk. Investing in the securities of small and medium capitalization companies involves greater risk and the possibility of greater price volatility than investing in larger capitalization companies. Since small and medium-sized companies may have limited operating histories, product lines and financial resources, the securities of these companies may be less liquid and more volatile. They may also be sensitive to (expected) changes in interest rates and earnings.

Passive Investment and Index Risk. There is no guarantee that the Underlying Index will create the desired exposure and the Fund is not actively managed. It does not seek to "beat" the Underlying Index or take temporary defensive positions when markets decline. Therefore, the Fund may purchase or hold securities with current or projected underperformance.

Management Risk. The Fund may not fully replicate the Underlying Index and may hold less than the total number of securities in the Underlying Index. Therefore, the Fund is subject to the risk that Krane or the Sub-Adviser's security selection process may not produce the intended results.

Tracking Error Risk. The Fund's return may not match or achieve a high degree of correlation with the return of the Underlying Index. This may be due to, among other factors, the Fund holding cash under certain circumstances in lieu of Underlying Index securities, such as when the Fund is subject to delays converting U.S. dollars into a foreign currency to purchase foreign securities and unable to invest in certain constituents of the Underlying Index due to regulatory constraints, trading suspensions, and legal restrictions imposed by foreign governments. To the extent that the Fund employs a representative sampling strategy or calculates its NAV based on fair value prices and the value of the Underlying Index is based on securities' closing prices on local foreign markets, the Fund's ability to track the Underlying Index may be adversely affected.

Market Risk. The values of the Fund's holdings could decline generally or could underperform other investments. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, and/or other government actors, including those in foreign countries, or changes in global trade relationships could cause volatility in global financial markets, negative sentiment and higher levels of Fund redemptions, which could have a negative impact on the Fund and could result in losses. Geopolitical and other risks, including environmental and public health risks may add to instability in world economies and markets generally. Changes in value may be temporary or may last for extended periods and can occur suddenly and unexpectedly. Further, the Fund is susceptible to the risk that certain investments may be difficult or impossible to sell at a favorable time or price. Market developments may also cause the Fund's investments to become less liquid and subject to erratic price movements.

Artificial intelligence, including machine learning technology and generative artificial intelligence (collectively, "artificial intelligence"), is rapidly evolving. While the full extent of current or future risks related thereto is not possible to predict, artificial intelligence could significantly disrupt the business models and markets in which the Fund invests and subject the Fund or issuers in which it invests to increased competition, legal and regulatory risks and compliance costs, any of which could have a material adverse effect on the Fund or the business, financial condition and results of operations of the issuers in which it invests. The Fund's service providers, or the issuers of securities in which the Fund invests may utilize artificial intelligence technologies in business operations. It is possible that the information provided through the use of artificial intelligence could be insufficient, incomplete, inaccurate or biased, or constitute infringement of third-party intellectual property rights, leading to adverse effects for the Fund, including, potentially, operational errors, cybersecurity vulnerabilities and investment losses. Moreover, technological developments in, and the increasingly widespread use of, artificial intelligence technologies may pose risks to the Manager and the Fund. For instance, the Fund may be exposed to competitive risks related to the adoption of artificial intelligence or other new technologies by others within the industry. In addition, investments in technology systems and artificial intelligence by the Manager may not deliver the benefits the Fund expects.

Valuation Risk. Independent market quotations for certain investments held by the Fund may not be readily available, and such investments may be fair valued or valued by a pricing service at an evaluated price. These valuations involve subjectivity and different market participants may assign different prices to the same investment. As a result, there is a risk that the Fund may not be able to

sell an investment at the price assigned to the investment by the Fund. Such differences could be significant, particularly for illiquid securities and securities that trade in relatively thin markets and/or markets that experience extreme volatility. In addition, the securities in which the Fund invests may trade on days that the Fund does not price its shares; as a result, the value of Fund shares may change on days when investors cannot purchase or sell their Fund holdings.

Large Shareholder Risk. To the extent a large number of shares of the Fund is held by a single shareholder or a small group of shareholders, the Fund is subject to the risk that redemption by those shareholders of all or a large portion of their shares will adversely affect the Fund's performance by forcing the Fund to sell securities, potentially at disadvantageous prices, to raise the cash needed to satisfy such redemption requests. This risk may be heightened during periods of declining or illiquid markets, or to the extent that such large shareholders have short investment horizons or unpredictable cash flow needs. Such redemptions may also increase transaction costs and/or have adverse tax consequences for remaining shareholders.

Tax Risk. In order to qualify for the favorable tax treatment available to regulated investment companies, the Fund must satisfy certain income, asset diversification and distribution requirements each year. The Fund's pursuit of its investment strategy will potentially be limited by the Fund's intention to qualify for such treatment and could adversely affect the Fund's ability to so qualify. The Fund may make certain investments, the treatment of which for these purposes is unclear. The Fund's investments in issuers whose control persons are not certain creates a risk that tax authorities may retrospectively deem the Fund to have failed the asset diversification requirements. If the Fund were to fail the favorable tax treatment requirements, it would be taxed in the same manner as an ordinary corporation, which would adversely affect its performance.

Depository Receipts Risk. The Fund may hold the securities of foreign companies in the form of depository receipts, including American Depositary Receipts and Global Depositary Receipts. Investing in depository receipts entails the risks associated with foreign investments, such as fluctuations in foreign currency exchange rates and political and economic risks distinct from those associated with investing in the securities of U.S. issuers. In addition, the value of the securities underlying the depository receipts may change materially when the U.S. markets are not open for trading, which will affect the value of the depository receipts.

Derivatives Risk. The use of derivatives (including swaps, futures, forwards, structured notes and options) may involve leverage, which includes risks that are different from, and greater than, the risks associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value and valuation may be more difficult in times of market turmoil. There may be imperfect correlation between the derivative and that of the reference asset, resulting in unexpected returns that could materially adversely affect the Fund. Certain derivatives (such as swaps and options) are bi-lateral agreements that expose the Fund to counterparty risk, which is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of derivative. In that case, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations. That risk is generally thought to be greater with over-the-counter ("OTC") derivatives than with derivatives that are exchange traded or centrally cleared. Counterparty

risks are compounded by the fact that there are only a limited number of ways available to invest in certain reference assets and, therefore, there may be few counterparties to swaps or options based on those reference assets.

Pursuant to government regulations, the Fund's portfolio turnover rate is calculated without regard to most derivatives. As a result, the Fund's portfolio turnover may be low despite relatively high portfolio activity. High portfolio turnover or high portfolio activity may increase the Fund's brokerage commission costs and other transaction costs and may negatively impact the Fund's performance. Such portfolio turnover or activity also may generate net short-term capital gains.

Investments in Investment Companies Risk. The Fund may invest in other investment companies, including those advised, sponsored or otherwise serviced by Krane, the sub-adviser and/or its affiliates. The Fund will indirectly be exposed to the risks of investments by such funds and will incur its pro rata share of the underlying fund's expenses. Additionally, investments in ETFs are subject to ETF Risk. Krane and the sub-adviser are subject to conflicts of interest in allocating Fund assets to investment companies that are advised, sponsored or otherwise serviced by Krane, the sub-adviser and/or its affiliates. To the extent that the Fund invests in investment companies or other pooled investment vehicles that are not registered pursuant to the 1940 Act, it will not enjoy the protections of the U.S. law.

Securities Lending Risk. To the extent the Fund lends its securities, it may be subject to the following risks: (1) the securities in which the collateral is invested may not perform sufficiently to cover the applicable rebate rates paid to borrowers and related administrative costs; (2) delays may occur in the recovery of securities from borrowers, which could interfere with the Fund's ability to vote proxies or to settle transactions; and (3) although borrowers of the Fund's securities typically provide collateral in the form of cash that is reinvested in securities, there is the risk of possible loss of rights in the collateral should the borrower fail financially. Krane is subject to potential conflicts of interest because the compensation paid to it increases in connection with any net income received by the Fund from the securities lending program.

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Operational and Cybersecurity Risk. The Fund, Krane, its service providers and your ability to transact with the Fund may be negatively impacted due to operational matters arising from, among other problems, human errors, systems and technology disruptions or failures, or cybersecurity incidents. Cybersecurity incidents may allow an unauthorized party to gain access to fund assets, customer data, or proprietary information, or cause the Fund or its service providers, as well as the securities trading venues and their service providers, to suffer data corruption or lose operational functionality. It is not possible for Krane or the other Fund service providers to identify all of the cybersecurity or other operational risks that may affect the Fund or to develop processes and controls to completely eliminate or mitigate their occurrence or effects.

Performance Information

Once the Fund has completed a full calendar year of operations, a bar chart and table will be included in this Prospectus that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the variability of the Fund's return to a broad measure of market performance. Once available, the Fund's current performance information will be available at www.kraneshares.com. Past performance does not necessarily indicate how the Fund will perform in the future.

Management

Investment Adviser and Sub-Adviser

Krane Funds Advisors, LLC ("Krane" or "Adviser") serves as the investment adviser to the Fund.

Dragon Capital Management (HK) Limited ("Dragon Capital" or "Sub-Adviser") serves as the investment sub-adviser to the Fund.

Portfolio Manager

Sui Yang Phang, Managing Director of the Sub-Adviser, serves as the Fund's portfolio manager since the Fund's inception.

Purchase and Sale of Fund Shares

Shares may be purchased and redeemed from the Fund only in a large specified number of Shares each called a "Creation Unit," or multiples thereof. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on the Exchange. Individual shares can be bought and sold throughout the trading day like other publicly traded securities through a broker-dealer on the Exchange. These transactions do not involve the Fund. The price of an individual Fund share is based on market prices, which may be different from its NAV. As a result, the Fund's shares may trade at a price greater than the NAV (at a premium) or less than the NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). Most investors will incur customary brokerage commissions and charges when buying or selling shares of the Fund through a broker-dealer.

Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid ask spreads, are available on the Fund's website at www.kraneshares.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account, which may be taxable upon withdrawal.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary's website for more information.
