

KraneSharesTM

Summary Prospectus

KraneShares Global Carbon Strategy ETF

Principal Listing Exchange for the Fund: NYSE Arca, Inc. (the "Exchange")
Ticker Symbol: **KRBN**

August 1, 2026

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus, Statement of Additional Information, recent reports to shareholders and other information about the Fund online at www.kraneshares.com. You can also get this information at no cost by calling 1-855-857-2638, by sending an e-mail request to KraneFunds@seic.com or by asking any financial intermediary that offers shares of the Fund. The Fund's Prospectus and Statement of Additional Information, each dated August 1, 2026, as each may be amended or supplemented from time to time, are incorporated by reference into this Summary Prospectus and may be obtained, free of charge, at the website, phone number or email address noted above.

Investment Objective

The KraneShares Global Carbon Strategy ETF (the “Fund”) seeks to provide investment results that, before fees and expenses, track the performance of the S&P Global Carbon Credit Index Excess Return (the “Index”), plus any returns from any available collateral. The Index is comprised of futures contracts on emission allowances issued by various “cap-and-invest” programs that seek to reduce greenhouse gas emissions over time.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses	
(expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.78%
Distribution and/or Service (12b-1) Fees*	0.00%
Other Expenses	0.01%
Acquired Fund Fees and Expenses**	0.12%
Total Annual Fund Operating Expenses.	0.91%

* Pursuant to a Distribution Plan, the Fund may bear a Rule 12b-1 fee not to exceed 0.25% per year of the Fund's average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees has not currently approved the commencement of any payments under the Distribution Plan.

** "Acquired Fund Fees and Expenses" are expenses incurred indirectly by the Fund through its ownership of shares of other investment companies (such as exchange-traded funds). They are not direct operating expenses paid by Fund shareholders and are not used to calculate the Fund's net asset value ("NAV"). In addition, "Acquired Fund Fees and Expenses" will not be reflected in the Fund's Financial Statements in its shareholder report. Therefore, the amounts listed in "Total Annual Fund Operating Expenses" and "Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement" will differ from those presented in the Fund's Financial Highlights.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

1 Year	3 Years	5 Years	10 Years
\$93	\$290	\$504	\$1,120

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 50% of the average value of

its portfolio. Regulations require that the portfolio turnover rate be calculated without regard to trades of short-term cash instruments, in-kind transactions or derivatives transactions, which may comprise a significant portion of the Fund's trading. If such trades were reflected, the calculated portfolio turnover rate may be significantly higher.

Principal Investment Strategies

In seeking to achieve its investment objective, the Fund attempts to maintain exposure to carbon credit futures that are substantially the same as those included in the Index, which is an index comprised of futures contracts on emission allowances issued by various "cap-and-invest" programs that seek to reduce greenhouse gas emissions over time. The Fund may also invest directly or indirectly in certain debt instruments.

The Index is designed to measure the performance of a portfolio of liquid carbon credit futures that require "physical delivery" of emission allowances issued under cap-and-invest programs. An emission allowance or carbon credit is a unit of emissions (typically one ton of CO₂) that the owner of the allowance or credit is permitted to emit. A cap-and-invest program seeks to gradually reduce such emission allowances or carbon credits over time to incentivize companies to reduce greenhouse gas emissions in an effort to curb climate change. The Index includes only carbon credit futures that mature in December of the next one to two years and that have a minimum average monthly trading volume over the previous six months of at least \$10 million. The Index weights eligible carbon credit futures based on their average monthly trading volume during the relevant six-month period, subject to a 5% minimum weight per regime and a 65% maximum weight to any one of the following geographic regions: (1) Europe, the Middle East and Africa, (2) the Americas, and (3) the Asia-Pacific. In addition, no single carbon credit futures contract expiring in a particular year will receive an allocation of less than 5% or more than 60% at the semi-annual rebalancing or annual reconstitution of the Index.

What is a "cap-and-invest" program?

In a "cap-and-invest" program, a limit ("cap") is typically set by a regulator, such as a government entity or supranational organization, on the total amount of specific greenhouse gases, such as CO₂, that can be emitted by regulated entities, such as manufacturers or energy producers. Capping and reducing the cap on greenhouse gases is viewed as a key policy tool for reaching climate change objectives. The regulator then issues or sells "emission allowances" to regulated entities which may then buy or sell ("trade") the emission allowances on the open market.

To the extent that the regulator may then reduce the cap on emission allowances, regulated entities are thereby incentivized to reduce their emissions; otherwise they must purchase emission allowances on the open market, where the price of such allowances will likely be increasing as a result of demand, and regulated entities that reduce their emissions will be able to sell unneeded emission allowances for profit.

The opposite could also occur and the regulator may increase the cap on emission allowances, which would likely increase emissions and decrease the price of allowances. Commodity futures contracts linked to the value of emission allowances are known as carbon credit futures.

As of June 30, 2025, the Index included carbon credit futures linked to the value of emissions allowances issued under the following cap-and-invest programs: the European Union Emissions Trading System; the California Cap-and-Invest; Washington's Cap-and-Invest Program; Regional Greenhouse Gas Initiative; and the UK Emissions Trading System. As the global carbon credit market grows, additional carbon credit futures, are expected to enter the Index, and the Fund's portfolio when they have a minimum average monthly trading volume of at least \$10 million over the relevant six-month period.

The Fund utilizes a subsidiary (the "Subsidiary") for purposes of investing in carbon credit futures. The Subsidiary is a corporation operating under Cayman Islands law that is wholly-owned and controlled by the Fund. The Subsidiary is advised by the Adviser. The Fund's investment in the Subsidiary may not exceed 25% of the value of its total assets (ignoring any subsequent market appreciation in the Subsidiary's value), which limitation is imposed by the Internal Revenue Code of 1986, as amended, and is measured at the end of each quarter. The Subsidiary has the same investment objective as the Fund and follows the same investment policies and restrictions as the Fund. Except as noted, for purposes of this Prospectus, references to the Fund's investment strategies and risks include those of its Subsidiary, and references to the Fund include the Subsidiary.

While the Fund generally seeks to obtain exposure to the same carbon credit futures that are in the Index, the Fund and Subsidiary may not replicate the Index. For example, the Fund may invest in carbon credit futures with different maturity dates (i.e., not one of the next two Decembers), the Fund may weight the carbon credit futures differently than the Index, or the Fund may purchase carbon credit futures on different dates than the rebalancing date for the Index. The Fund may also use various instruments, including futures, forward contracts, swaps, notes and reverse repurchase agreements, to manage its exposure to currencies.

The Fund may also invest in other instruments that are consistent with its investment objective. For example, the Fund may invest in emission allowances issued under a cap-and-invest program, futures contracts that are not carbon credit futures, options on futures contracts, swap contracts, and other investment companies and notes, which may or may not be exchange-traded. The debt instruments in which the Fund intends to invest indirectly, through short-term bond funds and exchange-traded funds ("ETFs"), which can include affiliated ETFs, include government securities and corporate or other non-government fixed-income securities with maturities of up to 12 months. The Fund may also invest in cash and cash equivalents, including money market funds and repurchase agreements.

The Commodities Futures Trading Commission (the "CFTC") has adopted certain requirements that subject registered investment companies and their advisers to regulation by the CFTC if a registered investment company invests more than a prescribed level of its net assets in CFTC-regulated futures, options and swaps, or if a registered investment company markets itself as providing investment exposure to such instruments. Due to the Fund's use of CFTC-regulated futures and swaps above CFTC Rule 4.5 limits, it is considered a "commodity pool" under the Commodity Exchange Act.

The Fund is non-diversified. To the extent the Index is concentrated in a particular industry, the Fund is expected to be concentrated in that industry (using the notional value of any futures in which it invests). The Index is provided by S&P Dow Jones Indices LLC ("Index Provider").

Principal Risks

As with all ETFs, a shareholder of the Fund is subject to the risk that his or her investment could lose money. The Fund may not achieve its investment objective and an investment in the Fund is not by itself a complete or balanced investment program. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves the risk of total loss. In addition to these risks, the Fund is subject to a number of additional principal risks that may affect the Fund's performance, net asset value ("NAV") and trading price, including:

Carbon Emission Allowance and Cap-and-Invest Risk. There is no assurance that cap-and-invest programs will continue to exist. Cap-and-invest was designed to attempt to put a cap on pollution by putting a price on carbon emissions, but the approach may not prove to be an effective method of reduction in GHG emissions and or in achieving climate change objectives; and depending on the political climate globally, climate change concerns may be ignored or abandoned. As a result or due to other factors, cap-and-invest programs may be terminated or may not be renewed upon their expiration. New technologies may arise that may diminish or eliminate the need for cap-and-invest markets. Ultimately, the cost of emissions credits is determined by the cost of actually reducing emissions levels. If the price of credits becomes too high, it will be more economical for companies to develop or invest in green technologies, thereby suppressing the demand for credits and adversely affect the Fund.

Derivatives Risk. The use of derivatives (including swaps, futures, forwards, structured notes and options) may involve leverage, which includes risks that are different from, and greater than, the risks associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value and valuation may be more difficult in times of market turmoil. There may be imperfect correlation between the derivative and that of the reference asset, resulting in unexpected returns that could materially adversely affect the Fund. Certain derivatives (such as swaps and options) are bi-lateral agreements that expose the Fund to counterparty risk, which is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of derivative. In that case, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations. That risk is generally thought to be greater with over-the-counter ("OTC") derivatives than with derivatives that are exchange traded or centrally cleared. Counterparty risks are compounded by the fact that there are only a limited number of ways available to invest in certain reference assets and, therefore, there may be few counterparties to swaps or options based on those reference assets.

Pursuant to government regulations, the Fund's portfolio turnover rate is calculated without regard to most derivatives. As a result, the Fund's portfolio turnover may be low despite relatively high portfolio activity. High portfolio turnover or high portfolio activity may increase the Fund's brokerage commission costs and other transaction costs and may negatively impact the Fund's performance. Such portfolio turnover or activity also may generate net short-term capital gains.

Counterparty Risk. A counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest or settlement payments, or otherwise honor its obligations. If this

occurs, it could result in a reduction in the NAV of the Fund and could impair the Fund's ability to achieve its investment objective. The counterparty risk associated with the Fund's investments will be greater if the Fund uses only a limited number of counterparties. If there are only a couple of potential counterparties, the Fund, subject to applicable law, may enter into transactions with as few as one counterparty at any time.

Futures Contracts Risk. Successful use of futures contracts draws upon the Adviser's skill and experience with respect to such instruments and is subject to special risk considerations. The primary risks associated with the use of futures contracts include: (a) an imperfect correlation between the change in market value of the reference asset and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the inability to predict correctly the direction of market prices, interest rates, currency exchange rates and other economic factors; and (e) if the Fund has insufficient cash, it may have to sell investments from its portfolio to meet daily variation margin requirements, and the Fund may have to sell investments at a loss.

As a futures contract the Fund owns approaches its settlement date, the Fund may sell that futures contract and reinvest the proceeds in a similar contract with a more distant settlement date. This process is referred to as "rolling" a futures contract. The successful use of such a strategy depends upon the Adviser's skill and experience. Although the Fund will attempt to roll from an expiring futures contract to another contract that the Adviser believes will generate the greatest yield for the Fund, the Fund nevertheless may incur a cost to "roll" the contract. In a commodity futures market where current month expiring contracts trade at a lower price than next month's contract, a situation referred to as "contango," absent the impact of the overall movement in commodity prices, the Fund may experience an adverse impact because it would be selling less expensive contracts and buying more expensive contracts. In the event of a prolonged period of contango, and absent the impact of rising or falling commodity prices, there could be a significant negative impact on the Fund when it "rolls" its futures contract positions.

Commodity and Commodity-Linked Derivatives Risk. The Fund, directly or indirectly, may have significant investment exposure to the commodities markets and/or a particular sector of the commodities markets, which may subject it to greater volatility than investments in traditional securities. The commodities markets are impacted by a variety of factors, including market movements, resource availability, commodity price volatility, speculation in the commodities markets, domestic and foreign political and economic events and policies, trade policies and tariffs, war, acts of terrorism, changes in domestic or foreign interest rates and/or investor expectations concerning interest rates, domestic and foreign inflation rates and investment and trading activities in commodities. The value of a commodity-linked derivative investment typically is based upon the price movements of a physical commodity and may be affected by these same factors as well as credit and interest rate risks. In addition, investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments.

Commodity Pool Registration Risk. Under regulations promulgated by the CFTC, the Fund and the Subsidiary are considered commodity pools, and therefore each is subject to regulation under the Commodity Exchange Act and CFTC rules. Krane and MLIA are registered as a commodity pool operator and commodity trading adviser, respectively, and manages the Fund and the Subsidiary in accordance with CFTC rules, as well as the rules that apply to registered investment companies. Commodity pools are subject to additional laws, regulations and enforcement policies, all of which

may potentially increase compliance costs and may affect the operations and financial performance of the Fund and the Subsidiary. Additionally, positions in futures and other contracts may have to be liquidated at disadvantageous times or prices to prevent the Fund from exceeding any applicable position limits established by the CFTC. Such actions may subject the Fund to substantial losses.

Geographic Focus Risk. The Fund's investments are expected to be focused in a particular country, countries, or region to approximately the same degree as the Index and therefore the Fund may be susceptible to adverse market, political, regulatory, and geographic events affecting that country, countries or region. Such geographic focus also may subject the Fund to a higher degree of volatility than a more geographically diversified fund.

European Union Risk. The economies of the European Union are dependent to a significant extent on those of certain key trading partners, including China, the United States, and other European countries. A reduction in spending on products and services exported from the European Union, or volatility in the financial markets of member countries, may have an adverse impact on the broader European Union economy and could adversely affect the Fund. Separately, the European Union faces issues involving its membership, structure, procedures and policies. The United Kingdom (UK) officially withdrew from the European Union on January 31, 2020. Upon the UK's withdrawal from the European Union, the European Union and the UK entered into a transition phase, which concluded on December 31, 2020, and the UK and the European Union agreed upon a Trade and Cooperation Agreement that became fully effective on May 1, 2021. The UK, European Union and broader global economy may still experience volatility in foreign exchange markets as a result of these events. The UK's withdrawal may also destabilize some or all of the other European Union member countries and/or the Eurozone. The exit of additional member states from the European Union would subject its currency and banking system to increased risk and would likely result in increased volatility, illiquidity and potentially lower economic growth in the affected markets. Additionally, the reintroduction of national currencies in one or more European Union countries or the abandonment of the Euro as a currency could adversely affect the Fund.

California Risk. Because the Fund is exposed to carbon credits issued under the California Carbon Allowance "cap-and-invest" program, the Fund's performance also may be negatively impacted by factors affecting California. For example, natural disasters may disrupt the local, state or regional economy or certain sectors of the economy and may impact the prices of such carbon credit futures. California's budget and fiscal operations face certain structural impediments and rely on revenue sources which have been historically sensitive to the economic environment. California's diverse economy is the largest in the United States and one of the largest in the world with major components including high technology, trade, entertainment, manufacturing, tourism, construction, agriculture and services. Any downturn in these sectors or related industries may adversely affect the economy of the state and the prices of such carbon credit futures.

Eastern U.S. Risk. Because the Fund is exposed to carbon credit futures issued under the Regional Greenhouse Gas Initiative ("RGGI") "cap-and-invest" program, the Fund's performance also may be negatively impacted by factors affecting the Eastern region of the United States. For example, flooding, warming temperatures, and precipitation variability are growing challenges in the Eastern region of the United States and may disrupt the local, state, or regional economies of the Eastern states or certain sectors of those economies and may impact the prices of such carbon credit futures. The economies of Eastern region of the United States are comprised of components including agriculture, tourism, and manufacturing. Any downturn in these sectors or related industries may adversely affect the economy of the Eastern region of the United States and the prices of such carbon credit futures.

Washington Risk. Because the Fund is exposed to carbon credits issued under the Washington Carbon Allowance “cap-and-invest” program, the Fund’s performance also may be negatively impacted by factors affecting the State of Washington. Washington is the second state in the United States of America to implement an economy wide cap program, following California. This reflects the Washington Legislature’s strong commitment to tackling climate change. If the Washington Legislature was to revise its approach to climate change as a result of internal shifts in political dynamics or issues were to arise in the administration of the “cap-and-invest” program within Washington, this would potentially negatively impact the value of the Washington Carbon Allowance. Further, clean technology represents a key component of the economy in Washington. Any downturn in this sector or related industries may adversely affect the economy of the state and the prices of the carbon credit futures.

United Kingdom Risk. Because the Fund is exposed to carbon credits issued under the UK Allowance “cap-and-invest” program, the Fund’s performance also may be negatively impacted by factors affecting the UK. The economy of the UK is dependent to a significant extent on economies of certain key trading partners, including China, the United States, and other European countries. Following the UK’s withdrawal from the European Union on January 31, 2020, the European Union and the UK entered into a transition phase, which concluded on December 31, 2020, and the UK and the European Union agreed upon a Trade and Cooperation Agreement that became fully effective on May 1, 2021. The UK, European Union and broader global economy may still experience volatility in foreign exchange markets as a result of these events. The UK’s economy may still be affected by its withdrawal from the European Union, and any downturn in its major sectors or related industries may adversely affect the economy of the UK and the prices of such carbon credit futures.

Fixed Income Securities Risk. Fixed income securities are subject to credit risk and interest rate risk. Credit risk refers to the possibility that the issuer of a security will not make timely interest payments or repay the principal of the debt issued (i.e., default on its obligations). A downgrade or default on securities held by the Fund could adversely affect the Fund’s performance. Generally, the longer the maturity and the lower the credit quality of a security, the more sensitive it is to credit risk. Interest rate risk refers to fluctuations in the value of a debt resulting from changes in the level of interest rates. When interest rates go up, the prices of most debt instruments generally go down; and when interest rates go down, the prices of most debt instruments generally go up. Debt instruments with longer durations tend to be more sensitive to interest rate changes, typically making them more volatile. Interest rates have recently increased and may continue increasing, thereby heightening the risks associated with rising interest rates.

Foreign Securities Risk. Investments in securities of non-U.S. issuers may be less liquid than investments in U.S. issuers, may have less governmental regulation and oversight, and are typically subject to different investor protection standards than U.S. issuers. Investments in non-U.S. securities entail the risk of loss due to foreign currency fluctuations, political or economic instability, less complete financial information about the issuers, the possible imposition of withholding or confiscatory taxes, the possible seizure or nationalization of foreign holdings, and the possible establishment of exchange controls or freezes on the convertibility of currency. Foreign market trading hours, clearance and settlement procedures, and holiday schedules may limit the Fund’s ability to buy and sell securities. Additionally, foreign issuers may be subject to different accounting, auditing, recordkeeping, and financial reporting requirements. Securities of issuers traded on foreign exchanges may be suspended, either by the issuers themselves, by an exchange or by governmental authorities. If the Fund holds positions in such suspended securities, the Fund may be adversely

impacted. Certain countries in which the Fund may invest may be subject to extended settlement delays and/or foreign holidays, during which the Fund will unlikely be able to convert holdings to cash. All of these factors could result in a loss to the Fund.

Concentration Risk. From time to time, based on market or economic conditions, the Fund may have significant positions in one or more sectors or industries of the market. To the extent the Fund invests more heavily in particular sectors, its performance will be especially sensitive to developments that significantly affect those sectors. Individual sectors may be more volatile, and may perform differently, than the broader market. The industries that constitute a sector may all react in the same way to economic, political or regulatory events. Thus, the Fund is subject to loss due to adverse occurrences that affect one industry or group of industries or sector. While the Fund's sector and industry exposure is expected to vary over time, the Fund is currently subject to the principal risks of the sectors and industries disclosed herein.

Energy Sector Risk. Investments in, and/or exposure to, the energy sector, which includes energy commodities such as oil, gasoline, and carbon credits, may be highly volatile and can change quickly and unpredictably due to a number of factors, including the legislative or regulatory changes, adverse market conditions, increased competition affecting the energy sector, financial, accounting and tax matters and other events that the Fund cannot control. In addition, the value of energy commodities may fluctuate widely due to changes in supply and demand.

Currency Risk. To the extent that the Fund is exposed directly or indirectly to foreign currencies, including through its investments, or invests in securities or other instruments denominated in or indexed to foreign currencies, changes in currency exchange rates could adversely impact investment gains or add to investment losses. Currency exchange rates may fluctuate significantly over short periods of time and can be affected unpredictably by intervention, or failure to intervene, by U.S. or foreign governments or central banks or by currency controls or political developments in the U.S. or abroad. The Fund may also be subject to delays in converting or transferring U.S. dollars to foreign currencies and vice versa. This may adversely affect the Fund's performance.

A forward foreign currency contract involves a negotiated obligation to purchase or sell a specific currency at a future date (with or without delivery required), which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. Forward foreign currency contracts are not traded on exchanges; rather, a bank or dealer will act as agent or as principal in order to make or take future delivery, exposing the Fund to counterparty risk.

Regulatory Risk. The Fund is subject to the risk that a change in U.S. law and related regulations will impact the way the Fund operates, increase the particular costs of the Fund's operations and/or change the competitive landscape. Additional legislative or regulatory changes could occur that may materially and adversely affect the Fund.

Subsidiary Investment Risk. By investing in the Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary's investments. Since the Subsidiary is organized under the law of the Cayman Islands and is not registered with the SEC under the Investment Company Act of 1940, as amended (the "1940 Act"), the Fund will not receive all of the protections offered to shareholders of registered investment companies. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to operate as intended, which may negatively affect the Fund and its shareholders.

Reverse Repurchase Agreements Risk. In a reverse repurchase agreement, the Fund sells portfolio investments to another party and agrees to repurchase the investments at an agreed-upon price and date. Reverse repurchase agreements involve the risk that the counterparty will default on its obligations to the Fund, including by failing to return the investments in a timely manner, or at all, which may result in costs, delays, and losses to the Fund. Reverse repurchase agreements are viewed as a form of borrowing or leverage and may increase fluctuations in the Fund's net asset value.

Non-Diversified Fund Risk. Because the Fund is non-diversified and may invest a greater portion of its assets in fewer issuers than a diversified fund, changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

Securities Lending Risk. To the extent the Fund lends its securities, it may be subject to the following risks: (1) the securities in which the collateral is invested may not perform sufficiently to cover the applicable rebate rates paid to borrowers and related administrative costs; (2) delays may occur in the recovery of securities from borrowers, which could interfere with the Fund's ability to vote proxies or to settle transactions; and (3) although borrowers of the Fund's securities typically provide collateral in the form of cash that is reinvested in securities, there is the risk of possible loss of rights in the collateral should the borrower fail financially. Krane is subject to potential conflicts of interest because the compensation paid to it increases in connection with any net income received by the Fund from the securities lending program.

ETF Risk. As an ETF, the Fund is subject to the following risks:

Premium/Discount Risk. There may be times when the market price of the Fund's shares is more than the NAV intra-day (at a premium) or less than the NAV intra-day (at a discount). As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop loss orders to sell Fund shares may be executed at prices well below NAV.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market may pay brokerage commissions, which may be a significant proportional cost for investors buying or selling relatively small amounts of shares. Secondary market trading is subject to bid-ask spreads and trading in Fund shares may be halted by the Exchange because of market conditions or other reasons. Although the Fund's shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained or that the Fund's shares will continue to be listed. Trading in the Fund's shares on the exchange may be halted due to market conditions or for reasons that, in the view of the exchange, make trading in the Fund's shares inadvisable, such as extraordinary market volatility. In the event of a trading halt for an extended period of time, the Fund may be unable to execute its investment strategy and shareholders may be unable to liquidate any position in Fund shares.

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting.

Cash Transactions Risk. Because the Fund may effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities, an investment in the Fund may be less tax-efficient than an investment in other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. Cash transactions may involve considerable transaction expenses and taxes, including brokerage fees, that might not have occurred if the Fund utilized in-kind transactions. To the extent any costs associated with cash transactions are not offset by any transaction fees payable by an Authorized Participant, the Fund's performance could be negatively impacted.

International Closed Market Trading Risk. To the extent the Fund's investments trade in markets that are closed when the Fund and Exchange are open, there are likely to be deviations between current pricing of an underlying security and the prices at which the underlying securities are valued for purposes of the Fund's NAV. As a result, Shares may appear to trade at a significant discount or premium to NAV greater than those incurred by other ETFs. In addition, shareholders may not be able to purchase or redeem their shares of the Fund, or purchase or sell shares of the Fund on the Exchange, on days when the NAV of the Fund could be significantly affected by events in the relevant non-U.S. markets.

Liquidity Risk. The Fund's investments are subject to liquidity risk, which exists when an investment is or becomes difficult or impossible to purchase or sell at an advantageous time and price. If a transaction is particularly large or if the relevant market is or becomes illiquid, it may not be possible to initiate a transaction or liquidate a position, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. Liquidity risk may be the result of, among other things, market turmoil, the reduced number and capacity of traditional market participants, or the lack of an active trading market. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, new legislation or regulatory changes inside or outside the U.S. Liquid investments may become less liquid after being purchased by the Fund, particularly during periods of market stress. In addition, if a number of securities held by the Fund stop trading, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt.

Passive Investment and Index Risk. There is no guarantee that the Index will create the desired exposure and the Fund is not actively managed. It does not seek to "beat" the Index or take temporary defensive positions when markets decline. Therefore, the Fund may purchase or hold securities with current or projected underperformance.

Management Risk. The Fund may not fully replicate the Index and may hold less than the total number of investments in the Index. Therefore, the Fund is subject to the risk that Krane's investment selection process may not produce the intended results.

Market Risk. The values of the Fund's holdings could decline generally or could underperform other investments. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, and/or other government actors, including those in foreign countries, or changes in global trade relationships could cause volatility in global financial markets, negative sentiment and higher levels of Fund redemptions, which could have a negative impact on the Fund and could result in losses. Geopolitical and other risks, including environmental and public health risks may add to instability in world economies and markets generally. Changes in value may be temporary or may last for extended periods and can occur suddenly and unexpectedly. Further, the Fund is susceptible to the

risk that certain investments may be difficult or impossible to sell at a favorable time or price. Market developments may also cause the Fund's investments to become less liquid and subject to erratic price movements.

Artificial intelligence, including machine learning technology and generative artificial intelligence (collectively, "artificial intelligence"), is rapidly evolving. While the full extent of current or future risks related thereto is not possible to predict, artificial intelligence could significantly disrupt the business models and markets in which the Fund invests and subject the Fund or issuers in which it invests to increased competition, legal and regulatory risks and compliance costs, any of which could have a material adverse effect on the Fund or the business, financial condition and results of operations of the issuers in which it invests. The Fund's service providers, or the issuers of securities in which the Fund invests may utilize artificial intelligence technologies in business operations. It is possible that the information provided through the use of artificial intelligence could be insufficient, incomplete, inaccurate or biased, or constitute infringement of third-party intellectual property rights, leading to adverse effects for the Fund, including, potentially, operational errors, cybersecurity vulnerabilities and investment losses. Moreover, technological developments in, and the increasingly widespread use of, artificial intelligence technologies may pose risks to the Manager and the Fund. For instance, the Fund may be exposed to competitive risks related to the adoption of artificial intelligence or other new technologies by others within the industry. In addition, investments in technology systems and artificial intelligence by the Manager may not deliver the benefits the Fund expects.

Tracking Error Risk. The Fund's return may not match or achieve a high degree of correlation with the return of the Index. This may be due to, among other factors, the Fund investments in carbon credit futures with different maturity dates, the Fund weighing the carbon credit futures differently than the Index, and the Fund's purchase of carbon credit futures on different dates than the rebalancing date for the Index. To the extent that the Fund invests in other instruments that are consistent with its investment objective, such as futures contracts that are not carbon credit futures, options on futures contracts, swap contracts, and other investment companies and notes, the Fund's ability to track the Index may be adversely affected.

Valuation Risk. Independent market quotations for certain investments held by the Fund may not be readily available, and such investments may be fair valued or valued by a pricing service at an evaluated price. These valuations involve subjectivity and different market participants may assign different prices to the same investment. As a result, there is a risk that the Fund may not be able to sell an investment at the price assigned to the investment by the Fund. Such differences could be significant, particularly for illiquid securities and securities that trade in relatively thin markets and/or markets that experience extreme volatility. In addition, the securities in which the Fund invests may trade on days that the Fund does not price its shares; as a result, the value of Fund shares may change on days when investors cannot purchase or sell their Fund holdings.

Large Shareholder Risk. To the extent a large number of shares of the Fund is held by a single shareholder or a small group of shareholders, the Fund is subject to the risk that redemption by those shareholders of all or a large portion of their shares will adversely affect the Fund's performance by forcing the Fund to sell securities, potentially at disadvantageous prices, to raise the cash needed to satisfy such redemption requests. This risk may be heightened during periods of declining or illiquid markets, or to the extent that such large shareholders have short investment horizons or unpredictable cash flow needs. Such redemptions may also increase transaction costs and/or have adverse tax consequences for remaining shareholders.

Tax Risk. In order to qualify for the favorable tax treatment available to regulated investment companies, the Fund must satisfy certain income, asset diversification and distribution requirements each year. The Fund's pursuit of its investment strategy will potentially be limited by the Fund's intention to qualify for such treatment and could adversely affect the Fund's ability to so qualify. The Fund may make certain investments, the treatment of which for these purposes is unclear. The Fund's investments in issuers whose control persons are not certain creates a risk that tax authorities may retrospectively deem the Fund to have failed the asset diversification requirements. If the Fund were to fail the favorable tax treatment requirements, it would be taxed in the same manner as an ordinary corporation, which would adversely affect its performance.

The Fund intends to treat its income from the Subsidiary and from index-linked structured notes as qualifying income. Income tax regulations on which taxpayers may rely for taxable years beginning after September 28, 2016, and other guidance provided by the IRS at the time of the introduction of such regulations, support that treatment, although there is no guidance directly addressing the status of such structured notes as securities. The tax treatment of the Fund's investment in the Subsidiary or in such index-linked structured notes, however, may be adversely affected by future legislation, court decisions, Treasury Regulations and/or guidance issued by the IRS that could affect whether income derived from such investments is "qualifying income" under Subchapter M of the Internal Revenue Code, or otherwise affect the character, timing and/or amount of the Fund's taxable income or any gains or distributions made by the Fund.

U.S. Government Obligations Risk. Obligations of U.S. Government agencies and authorities receive varying levels of support and may not be backed by the full faith and credit of the U.S. Government, which could affect the Fund's ability to recover should they default. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. Additionally, market prices and yields of securities supported by the full faith and credit of the U.S. government may decline or be negative for short or long periods of time.

Investments in Investment Companies Risk. The Fund may invest in other investment companies, including those advised, sponsored or otherwise serviced by Krane and/or its affiliates. The Fund will indirectly be exposed to the risks of investments by such funds and will incur its pro rata share of the underlying fund's expenses. Additionally, investments in ETFs are subject to ETF Risk. Krane is subject to conflicts of interest in allocating Fund assets to investment companies that are advised, sponsored or otherwise serviced by Krane and/or its affiliates. To the extent that the Fund invests in investment companies or other pooled investment vehicles that are not registered pursuant to the 1940 Act, it will not enjoy the protections of the U.S. law.

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Operational and Cybersecurity Risk. The Fund, Krane, its service providers and your ability to transact with the Fund may be negatively impacted due to operational matters arising from, among other problems, human errors, systems and technology disruptions or failures, or cybersecurity incidents. Cybersecurity incidents may allow an unauthorized party to gain access to fund assets, customer data, or proprietary information, or cause the Fund or its service providers, as well as the securities trading venues and their service providers, to suffer data corruption or lose operational functionality. It is not possible for Krane or the other Fund service providers to identify all of the cybersecurity or

other operational risks that may affect the Fund or to develop processes and controls to completely eliminate or mitigate their occurrence or effects.

Performance Information

The following bar chart and table illustrate the variability of the Fund’s returns and indicate the risks of investing in the Fund by showing how the Fund’s average annual total returns compare with those of a broad measure of market performance and an additional index with characteristics relevant to the Fund. All returns include the reinvestment of dividends and distributions. As always, please note that the Fund’s past performance (before and after taxes) is not necessarily an indication of how it will perform in the future. Prior to December 3, 2021, the Fund was actively managed and sought to outperform the Index through investments in debt instruments. Prior to November 3, 2025, the Fund previously sought to track the performance of the S&P Global Carbon Credit Total Return Index, before fees and expenses. Updated performance information is available at no cost by visiting www.kraneshares.com.

As of June 30, 2026, the Fund’s calendar year-to-date total return was -5.88%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter Ended/Year
Highest Return	28.78%	6/30/2021
Lowest Return	-24.70%	9/30/2022

Average Annual Total Returns for the periods ended December 31, 2025

KraneShares Global Carbon Strategy ETF	1 year	5 years	Since Inception (7-30-2020)
Return Before Taxes	23.10%	16.16%	19.05%
Return After Taxes on Distributions	22.16%	12.79%	15.86%
Return After Taxes on Distributions and Sale of Fund Shares	13.67%	11.41%	14.02%
S&P 500 Index (Reflects no deduction for fees, expenses or taxes)	17.88%	14.42%	16.38%
S&P Global Carbon Credit Index (Reflects no deduction for fees, expenses or taxes)	25.12%	7.72%	20.34%

Average annual total returns are shown on a before- and after-tax basis for the Fund. After-tax returns for the Fund are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold shares through tax-deferred arrangements, such as 401(k) plans or individual retirement plans.

Management

Investment Adviser and Sub-Adviser

Krane Funds Advisors, LLC (“Krane” or “Adviser”) serves as the investment adviser to the Fund. Climate Finance Partners LLC (“Sub-Adviser”) serves as the non-discretionary investment sub-adviser to the Fund.

Portfolio Managers

James Maund, Head of Capital Markets at the Adviser, has served as the lead portfolio manager of the Fund since the Fund’s inception. Jonathan Shelon, Chief Operating Officer of the Adviser, supports Mr. Maund and Krane’s investment team for the Fund and has been a portfolio manager of the Fund since the Fund’s inception. Luke Oliver, Head of Alternatives at the Adviser, has served as a portfolio manager of the Fund since August 2022.

Purchase and Sale of Fund Shares

Shares may be purchased and redeemed from the Fund only in a large specified number of Shares each called a “Creation Unit,” or multiples thereof. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on the Exchange. Individual shares can be bought and sold throughout the trading day like other publicly traded securities through a broker-dealer on the Exchange. These transactions do not involve the Fund. The price of an individual Fund share is based on market prices, which may be different from its NAV. As a result, the Fund’s shares may trade at a price greater than the NAV (at a premium) or less than the NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”). Most investors will incur customary brokerage commissions and charges when buying or selling shares of the Fund through a broker-dealer.

Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid ask spreads, are available on the Fund's website at www.kraneshares.com.

Tax Information

Fund distributions are generally taxable as ordinary income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account, which may be taxable upon withdrawal.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary's website for more information.
