

Customizing China Exposure within Emerging Market Portfolios

An Overview of the
KraneShares MSCI
Emerging Markets ex
China ETF (Ticker: KEMX)

Introduction to KraneShares

About KraneShares

Krane Funds Advisors, LLC is the investment manager for KraneShares ETFs. Our suite of China focused ETFs provides investors with solutions to capture China's importance as an essential element of a well-designed investment portfolio. We strive to provide innovative, first to market strategies that have been developed based on our strong partnerships and our deep knowledge of investing. We help investors stay current on global market trends and aim to provide meaningful diversification. Krane Funds Advisors, LLC is majority owned by China International Capital Corporation (CICC).

KEMX

KraneShares MSCI Emerging Markets ex China ETF

Investment Strategy:

KEMX is benchmarked to the MSCI Emerging Markets ex China Index, which tracks large-cap and mid-cap companies within emerging market countries, excluding China. KEMX enables investors to build tailored Emerging Market (EM) portfolios when combined with exposure to China. KEMX can be paired with KraneShares China-focused core and thematic funds to establish strategic positions in China without duplicating exposures.

KEMX Features:

- Exposure to large-cap and mid-cap companies within emerging market countries, excluding China
- Benchmarked to MSCI, a global leader in international indexing

By pairing KEMX with other KraneShares China-focused funds, investors can make strategic allocations to China by employing the following strategies:

- **China Core:** Exposure to the full range of publicly listed Chinese companies across the Mainland, US, and Hong Kong Stock Exchanges
- **China Core-Thematic:** Broad China exposure enhanced by specific sector or investment themes
- **China Thematic:** Focused exposure to specific sectors or themes in China
- **China Tactical:** Ability to dynamically adjust China's weighting within an Emerging Market portfolio

The risk-return profile of active EM investment does not differ significantly from passive EM investment

- Investors often associate minimizing risk with active management, especially with regards to emerging markets.
- Morningstar has developed the US Active Fund Diversified EM Category which aggregates the performance of US-listed actively managed EM funds.
- Over the past 1, 5, and 10 years, EM active managers have underperformed the MSCI Emerging Markets Index albeit with slightly lower volatility.

10 Year Performance of Active EM Funds vs. the MSCI EM Index

Active vs Passive EM Return and Volatility

	Annualized Returns			Annualized Volatility		
	1-Year	5-Year	10-Year	1-Year	5-Year	10-Year
MSCI EM	7.28%	3.12%	3.33%	15.55%	15.64%	17.05%
Active EM Funds	9.11%	1.42%	2.39%	13.31%	12.33%	14.68%

Index returns are for illustrative purposes only and do not represent actual Fund performance. Index returns do not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in an index. Past performance does not guarantee future results.

The size of China's equity market is large enough to be considered its own asset class.

China has the world's second largest economy and stock market.

Top 5 Country Weights in the MSCI All Country World Index (GDP Weighted)¹

Data from MSCI as of 12/31/2019. See page 20 for index definitions.

Data from MSCI as of 12/31/2019. Due to rounding numbers may not add up to 100%.
 *Full market capitalization based on MSCI Investable Market Indexes (IMI). Historic adjusted market Capitalizations based on MSCI Standard Indexes. Adjusted market caps reflect free-float or shares that are freely traded in the open market. The free-float adjustment reduces the overall market by about 1/3.
 **China includes Hong Kong, ADR and Mainland listed Chinese companies. Market capitalization formula: MSCI China A International IMI + Hong Kong & ADR constituents within MSCI Emerging Market Index.

Inclusion efforts spanning the past 19 years have made China's equity market available to outside investors.

- In 2002, the Chinese government launched the Qualified Foreign Institutional Investor (QFII) Quota Program, which allowed institutional investors who could demonstrate a limited capacity to repatriate earnings to purchase stocks listed on Mainland exchanges.¹
- From 2014 to 2016 the Stock Connect program was launched which allowed foreign investors to purchase Mainland listed stocks through accounts in Hong Kong without obtaining approval from the Chinese government.¹
- On September 3, 2018, MSCI completed the first of including Mainland listed A-shares in their Global Standard Indexes¹, and the inclusion factor reached 20% on November 2019.²
- 81.7% of Chinese stocks are listed in Hong Kong, Shenzhen (Mainland), or Shanghai (Mainland) exchanges, while 18.3% are listed in New York using American Depositary Receipts (ADRs).¹

Share Type	Weight in Overall China Equity Market	Description
A	40.5%	Listed on the Shanghai and Shenzhen Exchanges in RMB
B	0.1%	Listed on the Shanghai and Shenzhen Exchanges in USD and HKD
Listed on Mainland Exchanges	40.6%	
P Chip	17.6%	Listed on the Hong Kong Stock Exchange and incorporated in Cayman, Bermuda, BVI; privately managed
H	16.7%	Listed on the HK Stock Exchange
Red Chip	6.8%	Listed on the Hong Kong Stock Exchange, incorporated outside of Mainland China; controlled by PRC
Listed on Hong Kong Exchange	41.1%	
ADR	17.7%	Listed on overseas exchanges including the United States and Singapore
Non-ADR	0.6%	Listed on overseas exchanges but not considered an ADR
Listed on Overseas Exchanges	18.3%

Data from MSCI as of 12/31/19.

The unique characteristics of China's equity market performance demonstrate its capacity to have a distinct portfolio impact and provide diversification benefits

- Over the past 19 years, China was the best performer in 5 years and the worst performer in 5.
- By contrast, the U.S. was the best performer in 4 years and the worst in 4 years.

China's historical pattern of returns exhibits low correlations to other regions.

- Average correlations between China's equity market and other major equity markets, including other emerging markets, have remained low over the past 19 years, maintaining correlation coefficients generally lower than 0.7.
- Correlations remain low in bull market and bear market environments.

MSCI's current definition of China only represents a small portion of China's total market

- While 55% of China's equity market is China A-Shares, the current definition of China within MSCI EM Index is 2% China A-Shares and 98% Hong Kong and U.S. listed companies.
- The KraneShares MSCI China All Shares ETF (ticker: KALL) provides investors with broad exposure to China as an asset class and we believe is more reflective of the full range of publicly listed Chinese companies.
- Additionally, for investors seeking core exposure to China A-Shares, the KraneShares Bosera MSCI China A-Share ETF tracks the exact A-Share securities being incrementally included into the MSCI Emerging Markets Index.

KEMX can be paired with various China-focused strategies, allowing investors to choose the China allocation that matches their specific risk/return profile

China Core

A core China allocation should encompass the full China opportunity including Mainland, US, and Hong Kong stocks.

China Core-Thematic

Thematic investments may generally complement the China core allocation.

China Thematic

A strong view on a particular sector or investment theme permits a thematic approach to the China allocation.

Tactical Overlay

By analyzing various characteristics across countries and within regions, each strategy can be implemented tactically to further refine return and risk.

Example Portfolio 1: China Core

- China represents about 40% of the market cap of EM; therefore, we believe an allocation of 40% All China¹ within EM portfolios best reflects the full China opportunity.
- A hypothetical portfolio of 60% EM ex China² and 40% All China¹ has provided portfolios with less risk and comparable returns to emerging markets over the past 18 years.

Index returns are for illustrative purposes only and do not represent actual Fund performance. Index returns do not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in an index. Past performance does not guarantee future results.

Data from MSCI as of 12/31/2019. See page 21 for definitions.

- All China – index calculation methodology on page 21.
- EM ex China – index calculation methodology on page 21.

Example Portfolio 2: China Core-Thematic

- Investors seeking broad China exposure complemented by growth sectors such as China Internet¹ could create a blended core-thematic portfolio.
- A blend of 20% China A-Shares², 20% China Internet¹ and 60% EM ex China has largely outperformed the MSCI Emerging Markets Index since the inception of the KraneShares Boserá MSCI China A-Share ETF (ticker: KBA).

1.China Internet – index calculation methodology on page 22.

2.China A-Shares – index calculation methodology on page 22.

Example Portfolio 3: China Thematic

- China's sectors such as internet technology and healthcare are more volatile than Emerging Markets broadly, but have provided superior annualized returns Index since the inception of the KraneShares Boseri MSCI China A-Share ETF (ticker: KBA).
- Investors looking to gain exposure to specific sectors within China could substitute China's weight in EM with China Internet and China Healthcare¹.

¹.China Healthcare – index calculation methodology on page 22.

Investors can tailor EM portfolios around specific investment themes such as decreased exposure to State-Owned Enterprises (SOEs)

- State-Owned Enterprises are defined by MSCI as companies whose largest shareholder is a government entity or whose government ownership is over 20%¹.
- MSCI Emerging Markets has relatively high exposure to SOEs which constitute 18.62% of the Index¹.
- In contrast, China Internet and China Healthcare have very little exposure to SOEs.

Example Portfolio 4: China Tactical

- Investors looking to dynamically adjust their China position could create a blended All China / EM ex China portfolio that responds to relative value and growth factors between China and EM ex China.
- For example, one hypothetical approach could be that as Relative Earnings Growth¹ increases and Relative Valuation² decreases between All China and EM ex China, investors could tactically overweight/underweight exposure to China.

Information is hypothetical, and is provided for illustrative purposes only and not indicative of any particular investment

Data from MSCI as of 12/31/2019. See page 21 for index definitions.

1. Relative Earnings Growth (Growth Premium)- Relative short term forward EPS growth between the MSCI China All Shares Index and the MSCI Emerging Markets ex China Index

2. Relative Valuation (Valuation Premium)- Relative forward 12 month price/earnings ratio (P/E) between the MSCI China All Shares Index and the MSCI Emerging Markets ex China Index

KraneShares MSCI Emerging Markets ex China ETF (NYSE: KEMX)

Investment Strategy:

KEMX is benchmarked to the MSCI Emerging Markets ex China Index, which tracks mid-cap and large-cap companies within emerging market countries, excluding China. KEMX enables investors to build tailored EM portfolios with adjusted exposure to China. KEMX can be paired with KraneShares China-focused core and thematic funds to make a strategic investment in China without duplicating exposures.

Conclusion

- Within emerging markets, KraneShares believes China is in a league of its own; an asset class unto itself distinguished by its market size and unparalleled growth.
- We believe that incorporating a strategic China investment strategy that distinguishes China from the rest of EM may help to optimize EM performance as a whole.
- We believe KEMX is a great tool to enable a variety of custom completion strategies around China.

Custom China Allocation Strategies

China Core

A core China allocation should encompass the full China opportunity including Mainland, US, and Hong Kong stocks.

China Core-Thematic

Thematic investments may generally complement the China core allocation.

China Thematic

A strong view on a particular sector or investment theme permits a thematic approach to the China allocation.

Tactical Overlay

By analyzing various characteristics across countries and within regions each strategy can be implemented tactically to further refine return and risk.

Index Definitions:

MSCI ACWI Index: captures large and mid cap representation across 23 Developed Markets (DM) and 23 Emerging Markets (EM) countries.

The MSCI ACWI GDP Weighted Index: This index is based on the flagship MSCI ACWI Index, its parent index, and includes large and mid cap stocks across 23 Developed Markets (DM) and 24 Emerging Markets (EM) countries. The index uses a different weighting scheme than its cap weighted parent index, however. The weight of each country in the index is derived from its economic size (using GDP data) rather than the size of its equity market. Over time, GDP data tends to have more stability than equity market prices.

MSCI China Index: The index captures large and mid-cap representation across offshore listings of Chinese companies in the form of H shares, B shares, Red chips, P chips, and foreign listings such as ADRs. With 447 constituents, the index covers about 85% of this China equity universe. Currently, the index also includes Large Cap A shares, represented at 2.5% of their free float adjusted market capitalization.

CSI Overseas China Internet Index: selects overseas listed Chinese Internet companies as the index constituents; the index is weighted by free float market cap. The index can measure the overall performance of overseas listed Chinese Internet companies.

US Active Fund Diversified Emerging Mkts Morningstar Category: Morningstar categories help investors and investment professionals make meaningful comparisons between funds. Diversified emerging-markets portfolios tend to divide their assets among 20 or more nations, although they tend to focus on the emerging markets of Asia and Latin America rather than on those of the Middle East, Africa, or Europe. These portfolios invest predominantly in emerging market equities, but some funds also invest in both equities and fixed income investments from emerging markets. This category aggregates the performance of US-listed actively managed EM funds.

RETURN, RISK & CORRELATION	INDEX	INDEX DEFINITION
Developed Markets	MSCI WORLD INDEX	MSCI World Index (Net USD): The MSCI World Index captures large and mid cap representation across 23 Developed Markets (DM) countries. With 1,644 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country. Inception date: Mar 31, 1986.
	Inception Date: Mar 31, 1986	
Emerging Markets	MSCI EMERGING MARKETS INDEX	MSCI Emerging Markets Index (Net USD): MSCI Emerging Markets Index captures large and mid cap representation across 23 Emerging Markets (EM) countries. With 834 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country. Inception date: Jan 1, 2001.
	Inception Date: Jan 01, 2001	
China (All China)	MSCI CHINA ALL SHARES INDEX	<p>MSCI China All Shares Index (Net USD): MSCI China All Shares Index captures large and mid-cap representation across China A shares, B shares, H shares, Red chips, P chips and foreign listings (e.g. ADRs). The index aims to reflect the opportunity set of China share classes listed in Hong Kong, Shanghai, Shenzhen and outside of China. It is based on the concept of the integrated MSCI China equity universe with China A-shares included. Inception date: Jun 26, 2014.</p> <p>MSCI China A Onshore Index (Net USD): The MSCI China A Onshore Index captures large and mid cap representation across China securities listed on the Shanghai and Shenzhen exchanges. Inception date: May 10, 2005.</p> <p>MSCI China Index (Net USD): The MSCI China Index captures large and mid cap representation across China H shares, B shares, Red chips, P chips and foreign listings (e.g. ADRs). With 153 constituents, the index covers about 85% of this China equity universe. China's Equity (Stock) Market: For the purposes of this presentation, this refers to the superset of investments including the Mainland, Hong Kong, and overseas listed securities found in the MSCI China All Shares Index. Note that others may use a different definition and, as such, the data provided by other sources may not match ours as it may exclude shares listed in certain places.

Important Notes

Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' full and summary prospectus, which may be obtained by visiting www.kraneshares.com. Read the prospectus carefully before investing.

ETF shares are not redeemable with the issuing fund other than in large Creation Unit aggregations. Instead, investors must buy or sell ETF Shares in the secondary market with the assistance of a stockbroker. In doing so, the investor may incur brokerage commissions and may pay more than net asset value (NAV) when buying and receive less than net asset value when selling. The NAV of the Fund's shares is calculated each day the national securities exchanges are open for trading as of the close of regular trading on the New York Stock Exchange ("NYSE"), normally 4:00 P.M. Eastern time (the "NAV Calculation Time"). Shares are bought and sold at market price not NAV. Closing price returns are based on the midpoint of the bid/ask spread at 4:00 P.M. Eastern Time (when NAV is normally determined).

Investing involves risk, including possible loss of principal. There can be no assurance that a Fund will achieve its stated objectives. The Funds are subject to political, social or economic instability within China which may cause decline in value. Fluctuations in currency of foreign countries may have an adverse effect to domestic currency values. Emerging markets involve heightened risk related to the same factors as well as increase volatility and lower trading volume.

Narrowly focused investments typically exhibit higher volatility. Internet companies are subject to rapid changes in technology, worldwide competition, rapid obsolescence of products and services, loss of patent protections, evolving industry standards and frequent new product productions. Such changes may have an adverse impact on performance. Technology companies may be subject to severe competition and rapid obsolescence. The KraneShares CSI China Internet Index ETF and KraneShares MSCI All China Healthcare Index ETF are non-diversified.

The ability of the KraneShares MSCI All China Index ETF to achieve its respective investment objectives is dependent, in part, on the continuous availability of A Shares and the ability to obtain, if necessary, additional A Shares quota. If the Fund is unable to obtain sufficient exposure to limited availability of A Share quota, the Fund could seek exposure to the component securities of the Underlying Index by investment in other types of securities. The Funds may invest in derivatives, which are often more volatile than other investments and may magnify the Fund's gains or losses.

Although the information provided in this document has been obtained from sources which Krane Funds Advisors, LLC believes to be reliable, it does not guarantee accuracy of such information and such information may be incomplete or condensed.

The KraneShares ETFs are distributed by SEI Investments Distribution Company (SIDCO), which is not affiliated with Krane Funds Advisors, LLC, the Investment Adviser for the Fund.
