Investment Strategy:

KFYP tracks the CSI CICC Select 100 Index, which takes a smart-beta¹ approach to systematically invest in companies listed in Mainland China. The strategy is based on China International Capital Corporation (CICC)'s latest research on China's capital markets. This quantitative approach reflects CICC's top down and bottom up research process, seeking to deliver the 100 leading companies in Mainland China.

KFYP features:

- Smart-beta strategy which seeks to deliver cost effective alpha².
- Exposure to the top 100 industry leaders within China's Mainland A-share market identified through the CICC Research team's quantitative methodology.
- Seeks to provide exposure to performance leaders through a Return on Equity (ROE)³ filter which is further refined through bottom-line growth and valuation criteria.

About CICC & CICC Research:

- CICC is a leading, publicly traded, Chinese financial services company with expertise in research, asset management, investment banking, private equity and wealth management.
- In 2018, the CICC Research Team ranked #1 in Institutional Investor's All-China Research Category for the seventh year in a row.⁴
- CICC has over 200 branches across Mainland China, with offices in Hong Kong, Singapore, New York, San Francisco, and London.

*Formerly the KraneShares Zacks New China ETF

1. Smart beta is an investment style where a manager passively follows an index designed to take advantage of perceived systematic biases or inefficiencies in the market.
2. Alpha is the active return on an investment, gauges the performance of an investment against a market index or benchmark which is considered to represent the market's movement as a whole.
3. Return on equity (ROE) is a measure of financial performance calculated by dividing net income by shareholders' equity
4. Alexandra DeLuca, "The Firms Helping Investors Navigate a Trade War in China", Institutional Investor 11/1/2018. retrieved 12/31/2019.

The China A-share market is too big to ignore.

As the world's second largest economy and stock market, investment in China A-shares is still underrepresented in global capital markets

1. Data from MSCI as of 12/31/2019, retrieved 12/31/2019. See page 15 for index definitions

On February 28, 2019, MSCI made a larger than expected China A-Share inclusion announcement. MSCI will increase the inclusion factor of China A-Shares in their Global Standard Indexes from 5% to 20% in 2019.

Currently, **\$1.8 trillion** track the MSCI EM Index. **Up to \$300b** are expected to be reallocated to China A-Shares after full inclusion.

- On September 3, 2018 MSCI completed the first 5% inclusion of China A-Shares within the MSCI Emerging Markets Index.
- MSCI increased the inclusion factor of China A-Shares from 5% to 20% by the end of 2019.
- The full proposed inclusion weight is projected to reach 17.4% of the Emerging Markets Index.
- We believe multiple inclusions could provide a sustained catalyst for the outperformance of the Mainland market.

China A-Share Inclusion in MSCI EM

 2. "MSCI Will Increase The Weight Of China A Shares In MSCI Indexes" MSCI, retrieved on 12/31/2019
 3. MSCI, "China and the future of equity allocations", June 2019.

The Chinese economy is transforming into a high-quality growth model. As such, prudent China investment strategies will allocate according to signs of long-term value and growth rather than sentiment.

As the world's second largest economy develops, the structure of its capital markets will increasingly resemble those in the developed world.

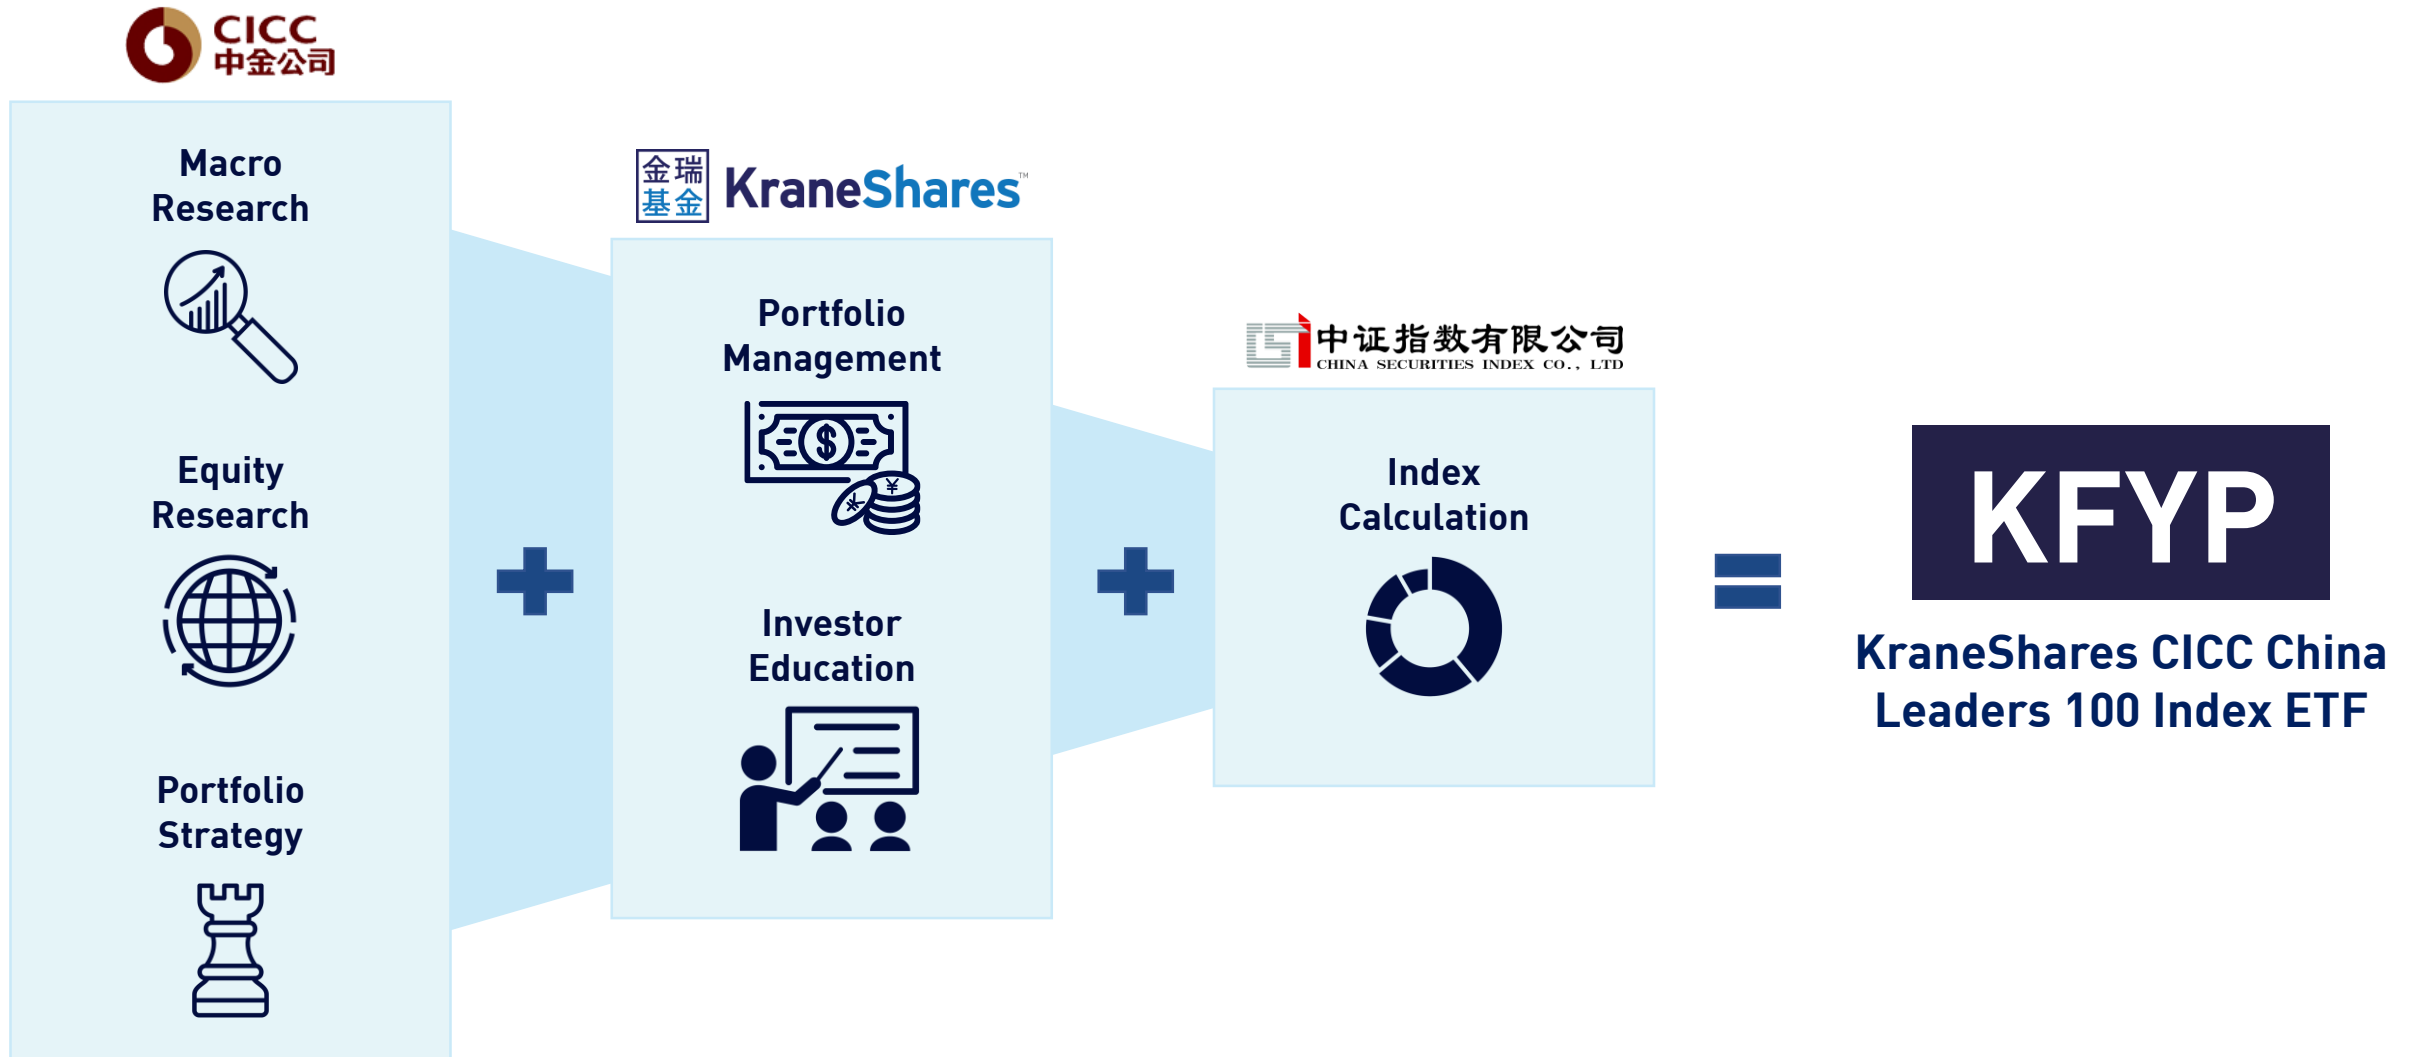

- The Chinese government's 13th Five Year Plan (2016-2020) stressed market allocation of resources and lowering costs of doing business in China.¹
- Chinese consumers are upgrading to higher-end products while its industries are consolidating and moving up the value chain.²
- Accordingly, the financial sector in China is experiencing significant growth. Financial institutions are increasingly exerting influence over equity markets³ as they long have done in developed capital markets. In the United States, institutions own approximately 80% of the stock market.⁴
- The result is that markets become less influenced by short-term sentiment and are increasingly driven by long-term fundamentals analysis.

KraneShares has partnered with CICC and CSI to provide investors with smart-beta investment solutions.

Why use the smart-beta approach with China A-shares?

- Compared to active and traditional passive funds, a smart-beta approach provides investors with a cost effective way to potentially gain excess returns in China's A-share market.
- Lower fees compared to average fees of active A-share funds
- Liquidity and transparency provided through the ETF structure

The Chinese market is dominated by retail investors which can make smart-beta investing more challenging

- Individual investors account for more than 80% of total trading volume in the China A-share market
- China A-shares see a higher proportion of retail investors in market turnover than other major markets
- Retail investors are typically more sentiment driven than institutions, which may cause stock prices and fundamentals to diverge significantly

CICC has identified that smart-beta investing is more effective for companies with high ROE¹ in China

- An ROE filter is a useful tool for identifying stocks that perform in line with fundamentals
- CICC Research has determined that smart-beta factors work more effectively when applied to the top 50% of A-share stocks as ranked by normalized ROE
- These stocks tend to have a more stable shareholder base because institutional investors typically make decisions based on fundamentals over longer time horizons

Shareholding Breakdown by Overseas Investors

■ High ROE ■ Low ROE

Inception date is 2/14/2018.

Important Notes

Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' full and summary prospectus, which may be obtained by visiting www.kraneshares.com. Read the prospectus carefully before investing.

ETF shares are not redeemable with the issuing fund other than in large Creation Unit aggregations. Instead, investors must buy or sell ETF Shares in the secondary market with the assistance of a stockbroker. In doing so, the investor may incur brokerage commissions and may pay more than net asset value (NAV) when buying and receive less than net asset value when selling. The NAV of the Fund's shares is calculated each day the national securities exchanges are open for trading as of the close of regular trading on the New York Stock Exchange ("NYSE"), normally 4:00 P.M. Eastern time (the "NAV Calculation Time"). Shares are bought and sold at market price not NAV. Closing price returns are based on the midpoint of the bid/ask spread at 4:00 P.M. Eastern Time (when NAV is normally determined).

Narrowly focused investments typically exhibit higher volatility. Technology companies may be subject to severe competition and rapid obsolescence. The Fund is non-diversified.

Investing involves risk, including possible loss of principal. There can be no assurance that a Fund will achieve its stated objectives. The Funds are subject to political, social or economic instability within China which may cause decline in value. Fluctuations in currency of foreign countries may have an adverse effect to domestic currency values. Emerging markets involve heightened risk related to the same factors as well as increase volatility and lower trading volume.

Although the information provided in this document has been obtained from sources which Krane Funds Advisors, LLC believes to be reliable, it does not guarantee accuracy of such information and such information may be incomplete or condensed.

The potential unavailability of liquid secondary market access relating to A-shares may have an adverse effect on the market price and the Fund's availability to dispose of particular issuers, including to honor redemptions, and may also make it more difficult for the Fund to obtain accurate market quotations in valuing these assets. In addition, uncertainties in the rules governing Chinese taxation of income and gains from investments in A-shares could result in unexpected liabilities, which may adversely impact fund returns.

The KraneShares ETFs are distributed by SEI Investments Distribution Company (SIDCO), which is not affiliated with Krane Funds Advisors, LLC, the Investment Adviser for the Fund. [R_US_KS_SEI]
